

accenture

Global IAM Tender 2026+

**Non-Binding offer from
Accenture GmbH to BMW AG**

Supplier ID: 58016212

Munich, 20.02.2026

Legal notice and disclaimer

The information set forth in this document shall be kept confidential. Accenture GmbH ("Accenture") remains the owner and unlimited beneficiary of any and all material. This document contains business and trade secrets of Accenture and/or third parties who have authorized Accenture to use and disclose such information. This document and the information contained herein, or any material associated therewith may only be disclosed to third parties with the prior written consent of Accenture. In addition, complete or partial copies or other reproductions of this document may only be made upon the prior written consent of Accenture. Use of this document shall be expressly limited to the purpose of evaluation by BMW AG ("BMW" or "the Client"). Any additional use of this document shall require Accenture's prior written consent and, in the case of a reproduction, the incorporation of a respective copyright note regarding Accenture or affected third persons.

The information set forth in this document may only be disclosed to Client's employees working in the Client organization to which this document is provided. In the event that the project specified herein does not lead to conclusion of contract, the material provided herein will be returned to Accenture by the Client without any request, therefore.

The scope of Accenture's services shall not include the provision of services involving legal or tax advice, which are reserved under statute for the relevant professional groups. The Client shall be responsible for clarifying and stipulating the legal and regulatory requirements applicable to it, the services, materials created, and any use by Client thereof. Such requirements may involve, in particular, adjustments due to statutory, collective bargaining and business requirements.

Any trademarks, logos etc. depicted or otherwise used in this document, including the Accenture name and logo, are the property of Accenture or the

respective third-party and may not be used without the owner's prior written expressed consent.

Certain components of Accenture methods, tools, accelerators and assets, e.g. Accenture Delivery Methods (together hereinafter "Assets") would be used by Accenture for the benefit of the Client in the consultancy service provided by Accenture. Should the Client request from Accenture a license to continue using certain Assets after the services have ended strictly for the internal business use defined in here, the Parties shall enter into a separate agreement which sets out the terms and conditions for the continued use of such Assets.

Accenture interprets the following words and phrases used in this Proposal, if any, in the manner indicated: "maximize", "optimize", "optimal" means to improve to a commercially reasonable degree; "minimize" means to reduce to a commercially reasonable degree; "best" means leading or of a high standard; "partner", "partnerships" does not mean a legal partnership, but rather a collaborative relationship; "right" where used as an adjective means appropriate; and "ensure" and "enable" means to use commercially reasonable efforts to implement and do not justify any warranted properties or independent quality guarantees (keine Beschaffenheitsgarantien).

This proposal is based on the current information available and includes non-binding estimates as to the services, costs and scheduling for the project contemplated hereby. This proposal is subject to completion of a mutually-acceptable written agreement, and does not constitute a legally binding offer or acceptance by Accenture. Accenture assumes that the parties will negotiate a legally binding agreement on the basis of the proposal made in this document.

Cover letter

Dear Ms. Huber, Ms. Fink, Mr. Dobre, and Ms. Dragani,

We are pleased to present our proposal for “Global IAM Tender 2026” – designed to meet BMW where the business stands today while unlocking its next phase of scalable, resilient growth.

BMW is navigating intensifying competition, margin pressure, fragmented data landscapes, dealer complexity, and workforce constraints. At the same time, up to €2B in untapped parts potential requires decisive action. We ensure business continuity and quality by staying close to the market, leveraging strong local execution, deep regional and IAM expertise, consistent standards across all regions, and strong system acumen across complex IT and data landscapes.

Our approach delivers rapid, risk-mitigated results while unlocking sustainable cost efficiencies through advanced analytics and AI-driven automation. Building on this foundation, our continuous program improvement model reduces the dependency of parts sales on dealer visits, establishing a more cost-efficient and resilient operating model that delivers measurable and sustainable outcomes. Leveraging proven accelerators and reusable assets, we enable scalable and standardized execution across markets while minimizing risk and operational complexity.

We are the right partner to scale and professionalize the business while ensuring operational continuity throughout the transformation. Our proven BMW track record, deep aftersales expertise, strong governance model, and thorough understanding of system interdependencies ensure seamless execution, transparency, and continuous improvement. By combining strategic clarity with execution strength, we help BMW unlock value, strengthen competitiveness, and secure long-term business continuity.

Sincerely,

Alexander Huber
Managing Director

christopher.richard@accenture.com

Accenture's effective, flexible and quickly scalable program approach supports BMW in the professionalization of IAM.

Based on current **challenges**,
Accenture
supports
BMW...

... with **pace**,...

...**certainty**,...

... and strategic **agility**...

...to generate
sustainable **outcomes**

- **Exploitation of significant revenue potential** for BMW regarding original parts sales towards independent repairers (IR)
- **Limited IR incentives** today call for **loyalty-driven models** such as consignment and performance incentives

- Building on your **current aftersales and operations reality**, we leverage proven Accenture automotive experience to rapidly shape concepts ready for global to large-scale
- Profound IT assets, implementation methodology and a pool of experienced consultants enable **fast market roll-out** while **future-proofing** the organization and ensure **business continuity**
- **Deep IAM data expertise** translating today's Independent Aftermarket data into actionable insights for NSCs, dealers and HQ

- Accenture's deep understanding of the **independent repairer market**, **Aftersales parts marketing** and **dealer processes** supports BMW in achieving market growth targets
- Proven sales **performance in growing business with independent repairers**
- **Hybrid coaching model** combining **remote** and **targeted on-site sessions** – increasing touchpoints and impact while significantly reducing travel effort and costs

- An **established global governance structure** enables markets with **strategic concepts**. **Locally adopted** to individual dealer needs **individualized solutions** are presented to IRs.
- **Holistic approach** with a state-of-the-art operating model involving all stakeholders and considering country specifics
- Efficient, yet flexible market specific team set-up is quickly scalable to changing requirements supported by a **digital backbone**

- Up to 426 m€ increase in independent aftermarket parts sales due to global roll out of business with independent repairer concept with market coverage >50% driven by **standardized data models**
- **Continuous improvement processes** and international leading practice exchange between markets and BMW headquarter

Agenda

01	Our understanding	07
02	Why Accenture	12
03	Joint approach	16
04	Continuous program improvements	62
05	Our team and timeline	69
06	Commercial offer	75
07	Credentials & exemplary profiles	90

01

Our understanding

The competitive pressure in Automotive has reached unprecedented levels leaving BMW in need for stronger exploitation of available profit pools

Market dynamics:

• New market entries & margin pressure:

Increasing competition from Asian electric vehicle manufacturers, coupled with lower margins in aftersales for e-vehicles.

• Car models/segments:

Aging car park driving loyalty towards specific segments impacting IAM.

• Global market specifics:

Diverse regional characteristics influencing strategies and operations.

• Tools & processes:

Need for optimized tools and processes to improve efficiency and adapt to evolving market demands.

• General safety

regulations (GSR): More safety features in cars lead to less accidents and body repair.

Dealers' challenges

Situation

- Often limited business relations with IRs
- Limited knowledge of IR market and clients
- Limited resources to establish IR relationships
- More and more parts traders on the market sell 3rd party parts for lower cost
- Warehouse employee workload focusing on dealer internal parts needs
- Market campaigns might not exist or might not be regionally customized
- Inbound attitude vs. outbound focus
- Sell-in vs. sell-out attitude

Competition core competencies

Situation

- Strong presence of sales agents in the territory
- Long-term business relation with IR
- User-friendly tools and technical support for parts order process
- Admin process with bundled invoicing
- Co-branded marketing approach
- Offer of a wide portfolio of parts with delivery as core strength
- Possibility to perform value discounts on multi-brand volume deliveries

Revenue potential

- ☑ Captive parts
- ❓ Competitive parts

Attractive offers for competitive parts

Multi-brand purchasing options

IR Interests

Price and quantity discount

Security across the whole service package

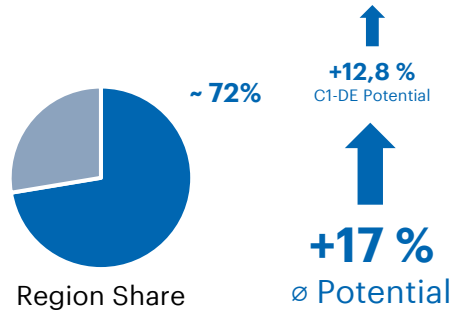

Quick delivery because of limited stocking ability

From 12% in mature markets* to 30% in developing ones - translating into €1.5–2.0bn IAM business and additional 426m € per year

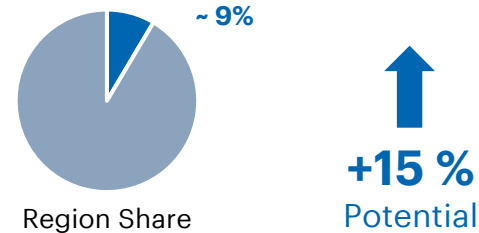

C1 Europe

• Region specifics:

- Largest and most stable aftermarket
- Ageing vehicle parc
- High data availability
- Strong multi-channel behavior
- Increasing brand-agnostic sourcing
- EV shift reduces mechanical parts, increases electronics

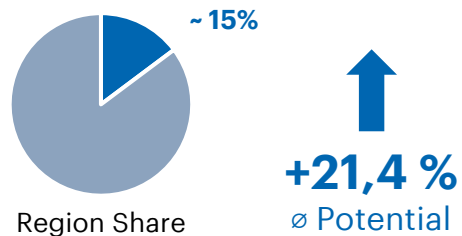

C5 China

• Market specifics:

- Rapidly growing car park
- Very high digital adoption
- Platform-driven ecosystems
- Low OEM loyalty outside warranty
- Data > brand
- Strong dependency on digital platforms

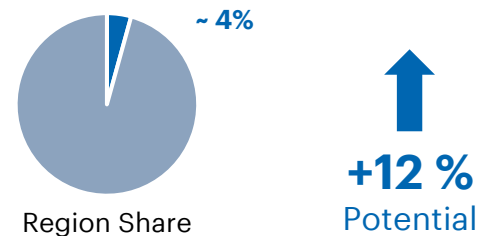

C3 APAC

• Region specifics:

- High service discipline
- Strong quality perception
- Australia: availability & distance

C4 Canada

• Market specifics:

- Stable and predictable market
- Close alignment with US structures

Across all regions the growth potential in 4th level parts business amounts to 426m € of sales per year

* calculation based on 2025 C1-DE numbers

Pursuing the IRs with a dedicated sales approach will unlock the access to this significant aftersales business potential

The clear ambition

+426m €*

ROI from 4th level parts sales globally (previous slide)

The key is to go via IR

* calculation based on 2025 C1-DE numbers

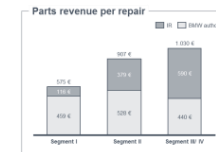

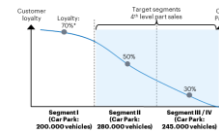

workshops

■ BMW ■ IR

Reaching **maximum geographical aftersales market penetration** is only possible together with IRs (example GER):

- IRs can fulfill the need of cost sensitive BMW owners
- IRs can serve **many more customers** due to sheer number of IRs compared to BMW workshops
- IRs can serve customers **in more remote areas** more closely than BMW workshops located in more populated areas

IRs are the gateway to exploiting the **larger parts revenue potential in higher segments** customers

- IRs have **much higher coverage in segments 3 and 4** (e.g. with expired warranty)
- With higher segments, **parts revenue per repair is rising** of which more revenue goes to IRs

The way: Systematic & holistic global IAM sales approach

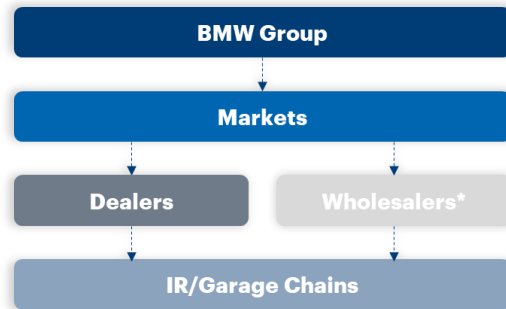

Global to local governance

BMW IAM toolbox

Digital enablement of manual processes via AOS 2.0 & Partslink24

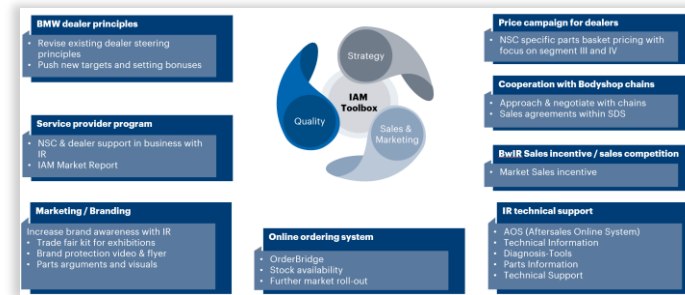

We are unlocking aftersales potential through localized execution, rollout support of BMW-specific frameworks and digital enablement

Global to local project governance

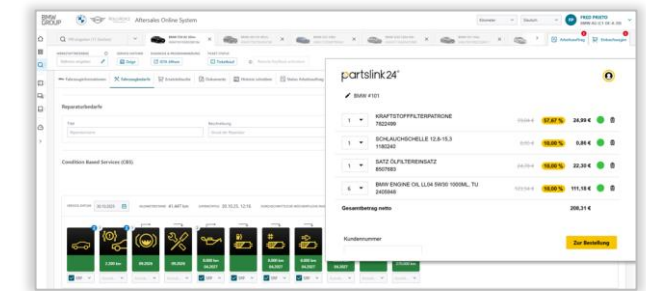

- Established global governance structure, catering to the needs of every stakeholder and generating benefits along the value chain
- Enabled markets with strategic concepts to increase revenues from parts sales in the 4th level aftermarket and increase market share
- Local adoption of individual dealer needs, simplifying the sales process and reducing administrative effort
- Individualized solutions are presented to IRs, providing the IRs with new opportunities for order management, attractive offers through targeted pricing and fast delivery promises

Maintenance of BMW IAM toolbox

- We support in rolling out and further developing your global, scalable IAM toolbox that defines one consistent execution standard and is calibrated to market-specific maturity, resources and constraints
- Outcome-driven structure with clear roles, measurable targets and repeatable routines to sustainably grow part sales and retention
- Framework delivers amongst others:
 - Market-specific parts basket pricing with focus on segment III and IV
 - Increased awareness for brand protection through videos
 - Defined and revised dealer steering principles

Digital enablement via AOS 2.0 & PL24**

- AOS provides core functionalities to repair and maintain BMW/MINI cars to IRs:
 - Digital service and repair history (dashboard)
 - Aftersales Information (AIR)
 - Parts ordering (Partslink24)
- While offering AOS is a legal requirement, the active use of AOS enables markets to increase IAM retention and parts sales and to business intelligence (e.g. lost sales analysis)
- Market-specific training and training concepts for dealers & IRs for aftersales systems to increase adoption rate

To further professionalize the IAM business and cope with the changing market and competitive environment, we are developing and supporting the rollout of IAM specific sales & marketing tools, concepts and processes in the markets and within the authorized distribution network.

*Wholesalers sales channel is market dependent; **Partslink24

02

Why Accenture

We are 25+ years on a shared journey with you - Experience as the foundation of business & IT excellence

First project
with BMW in 1998

Integration of **Rover's spare parts business** into its process and IT landscape

Integrating
Business & IT
at Rolls Royce

2000
Helped drive cost
savings in **global**
after-sales business

Application Operations

Evolves into SAO 2003 >700 applications
applying automation through robotics & AI

2005/06

Financial Services:

First BMW
online banking
solution

2012 - 2016

Future Retail, improved
HR processes and systems
in 24 markets (TMSI)

BMW New Sales & Service Model,

incl. augmented reality
solution offering BMWi
customers
a 3D experience

2013 - Today

Supported **digital
marketing & rollout
services** for 120+ BMW
& MINI markets

2015

Pioneering the **first in-
vehicle online &
Connected Drive store**

2024 - 2024

Logistics Benchmarking (CA-10 / CA-3)
Industry benchmarking spare parts supply chain
solutions & evaluation of SAP alternatives for
planning, warehousing & supply chain execution

2022-2023

After-sales "Umfeldanalyse" (CA-10)
Assess external factors that influence
BMW's after-sales business in the
future and derive strategic directions

2020-2025

"Fremdwerkstätten" (C1-DE-A-20)
Accident
management & CoCS
with market & dealer
support

2018-2019
**High
Performance
Management
After-sales
(CA-13)**
Global master
consultants,
reporting &
performance
management

2017 - Today

Internal quality management including root cause analysis of field
issues (PQM) within the AQ-40 framework

2022 - Today
**Use Case Accelerator - DMS
Invoice Data
(CA-13 / FG-6-V-7)**
Innovation framework
accelerates and supports the
rapid development of data /
analytics use cases

2024 - Today
DTCM (C1-DE-A-60)

Digitalization of
technical campaign
management with
Salesforce Automotive
Cloud

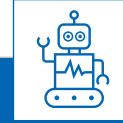

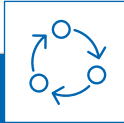

2025 - Today
**ATLAS Spare Parts Logistics
(CA-31 / FG-62)**
IT benchmarking logistics, spare
parts forecasting challenge

2025 - Today
Warranty Hub (CA-632)
Conducting dealer
warranty audits

We have ample experience in successfully delivering large-scale IAM projects across several markets and clients

		Analysis	Planning	Development	Success Management	Collision
	1 BMW C1-DE-A Professionalization of sales and marketing for aftersales in Germany. Focus on evolving customer expectations, diverse portfolios, and competitive market challenges	✓			✓	
	2 Premium Automotive OEM New Parts Trading Business Model to address evolving aftermarket dynamics and rising competition. Focus on meeting increasing expectations from ISPs and B2B customers	✓	✓			
	3 BMW C1-DE-A-20 Creation and continuous development of a sales support system to address declining service retention rates. Focus on adapting to changing customer expectations and market dynamics driven by digitalization	✓	✓	✓	✓

	5 Leading Provider for Mobility Solutions (Spain)  Spare parts pricing optimization to capture fast EBITDA uplift. Focus on reducing inconsistencies and establishing a transparent pricing approach	✓	✓	✓	✓	
	6 Global premium and luxury OEM (Italy)  Data-driven improvement in dealer parts sales to address performance gaps and enhance operational efficiency. Focus on professionalizing parts trading and leveraging supply chain opportunities	✓	✓	✓		
	7 Luxury OEM (China) High-performance aftersales network BI to enable data-driven dealer analysis. Focus on identifying future potential and setting personalized goals for optimization	✓	✓	✓	✓	
	8 Luxury OEM (China)  Aftersales sales incentive planning and updates to enhance transparency and motivation. Focus on improving data analysis and strategic alignment in distributor engagement	✓	✓	✓		✓
	9 BMW C1-DE-A-20 Optimizing services and rolling out Partslink24 to boost OEM parts sales. Focus on targeting ISPs, enhancing transparency, and addressing service retention challenges	✓	✓	✓	✓	
	10 BMW C1-DE-A-20 Professionalization of accident management and 1st level support for automated claims processing to address evolving customer expectations, competitive pressure, and user enablement challenges.	✓	✓	✓	✓	✓

Our aftersales and technology expertise, together with our end-to-end approach, drive accelerated development and ensure business continuity

Deep aftersales & automotive expertise

- Operate and transform aftersales services for 16 leading automotive OEM brands
- Scaling dealer parts sales through structured Partslink24 dealer onboarding and enablement
- Leverage our employees' prior OEM and dealership experience to bring practical industry insights to BMW dealers

Global Delivery Excellence & Governance

- Proven experience in delivering and governing large scale, global programs in complex environments
- Integrated E2E governance approach aligned to BMW's organizational maturity and operating context
- Strong global oversight combined with local market alignment and cross-functional integration
- Business continuity ensured through teams with deep, hands-on knowledge of BMW processes, governance, and operating models

Global delivery & strong local footprint

- Delivery capability in 120+ countries, ensuring global consistency combined with local footprint and language skills
- Proven partnership with BMW in many markets with track records of delivery excellence
- Extensive experience steering multi-market operations through a centralized delivery hub model e.g., MINI TNR Hypercare

Data, digital & innovation excellence

- Accenture rollout support for the innovative AOS platform of BMW
- Standardized IAM reports combined with cloud-based data hub capabilities to accelerate insight-driven decision-making
- Leverage GenAI and automation for predictive insights, root cause analysis, and a future-ready aftersales ecosystem

Dealer enablement & support

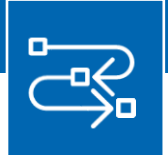

- Dealer coaching expertise (DE & CH markets) – Enhancing dealer performance and engagement with certified coaching programs
- Profound knowledge in the AOS 2.0 & Partslink24 system landscape as well as supporting AI-driven 1st level support with IAM specialized AI Agents in ticket resolving
- Scalable, hybrid delivery model leveraging digital collaboration tools to maintain close engagement with reduced on-site effort

03

Joint approach

We have defined four project pillars, which are the foundation for a joint and successful project delivery

Continuity & quality: Close to the market

- Strong local market presence through established hub and country teams
- Deep understanding of regional specifics and IAM dynamics
- Consistent delivery standards across all regions
- Trusted collaboration with NSCs and Field Force

One integrated setup: Global synergies & transparency

- Central steering combined with strong local execution
- Structured best practice exchange, especially benefiting smaller markets
- Efficiency gains and transparency through standardization and reusing
- Scalable tools, assets, and methodologies

Revenue growth: Data-driven impact

- Clear focus on measurable revenue uplift
- ROI-driven analytics and performance transparency
- Targeted actions based on insights, not intuition
- Outside-in market perspective combined with internal data

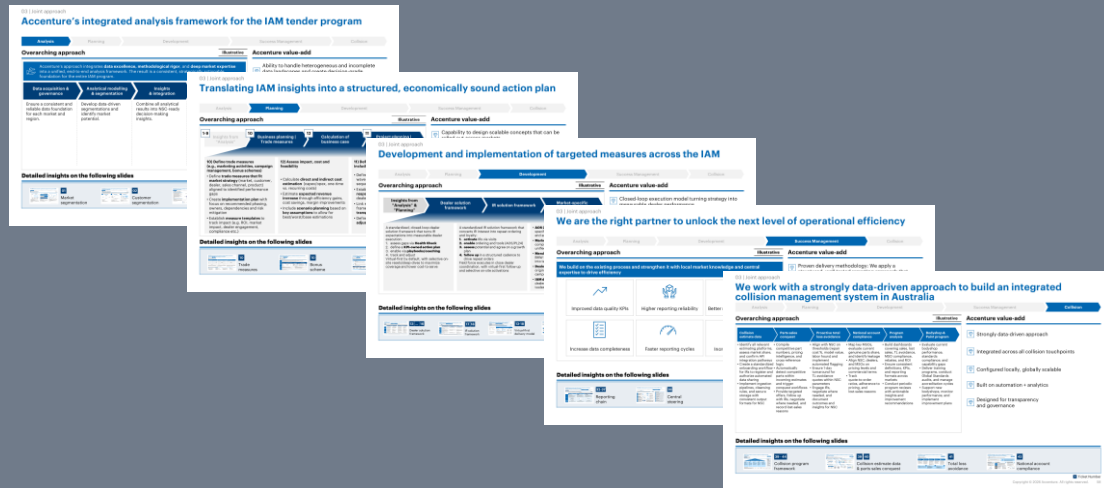

Future-proof: Digital & AI-enabled

- Strong digital and analytics capabilities embedded in delivery
- AI-supported process enablement and performance insights
- Scalable, modern tool landscape
- Prepared for evolving IAM and competitive dynamics

Operating from day one without disruption and continuous development on global IAM innovation potentials in a collaborative approach

Our proposal

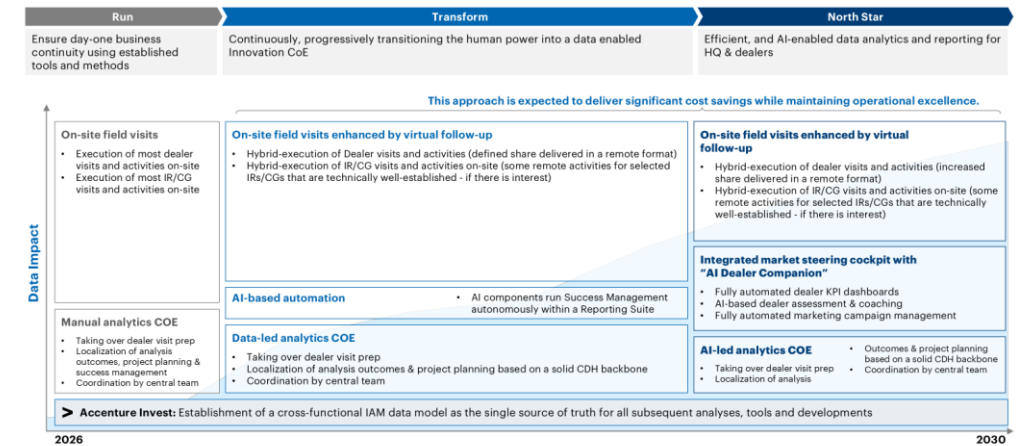

The following sections outline how we will take over IAM operations and deliver jointly from day one under BMW's governance - ensuring full continuity.

Our innovation approach*

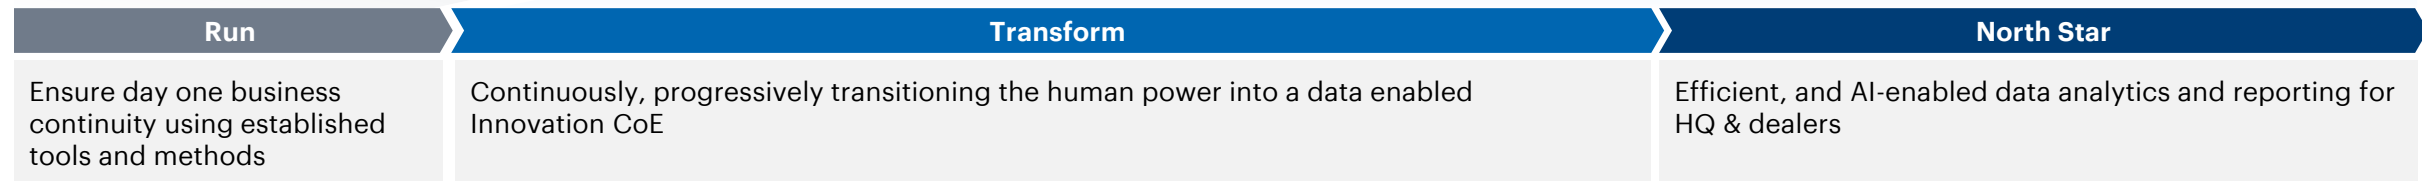

04 | Continuous program improvement

Building a future-proof IAM: A data-driven automation journey to maximize value and efficiency in 4th level business

Copyright © 2026 Accenture. All rights reserved. 64

*see chapter 04 | Continuous program improvement

In the following pages we present a structured approach across five clusters, covering selected work packages

	Analysis	Planning	Development		Success Management	Collision
Objective	Enable an NSC-approved, data-driven fact base across market, customer, dealer, channel, and portfolio analyses to pinpoint priority segments and performance gaps	Translate insights into NSC/AG-aligned pricing, parts-basket, logistics, and campaign plans with clear business cases and BMW-compliant governance	Enable and onboard the field force in sales systems, including technical know-how transfer	Set-up of BMW-compliant KPI frameworks, reporting structures, PL24 monitoring, data transfers, and regional consolidation processes according to acceptance and escalation requirements	Execute standardized dealer assessments, coaching formats, trainings, and NSC-system documentation to address capability, process, and portfolio gaps in line with the defined IAM principles	Establish 4th-level estimate-data structures, competitive-parts references, MSO-compliance mechanisms and total loss avoidance procedures for region C3-AU in alignment with NSC-defined parameters
Work Packages	1 Market segmentation	10 Business planning	13 Dealer visit	21 Online sales channels onb. for IRs	32 Reporting templates	39 Collision estimate data
	2 Customer segmentation	11 Project planning	14 Dealer assessment	22 AOS & PL24 training	33 Data analytics	40 Parts sales conquests
	3 Business field analysis	12 Calculating of business case	15 Dealer coaching	23 Tech-supp. AOS 2.0 & PL24	34 Data transfer to internal BMW systems	41 Proactive total loss avoidance
	4 Dealer analysis		16 Individual dealer coaching	24 IAM marketing portal onboarding	35 Quality test	42 National account compliance
	5 Sales channel analysis		17 Customer visit	25 Parts basket localization	36 PL24 - KPI monitoring	43 Programme analysis
	6 Product portfolio analysis		18 Customer assessment	26 Product argumenter	37 Consolidation of market reports	44 Bodyshop & paint progr.
	7 Creation of key figure set		19 Bonus concept	27 Merchandising concept	38 Central Steering	
	8 Logistics strategy		20 Incentive	28 1 st lvl. support IAM parts ordering		
	9 Parts basket pricing			29 1 st lvl. support syst./tech. topics		
				30 1 st lvl. Support administrative topics		
			31 1 st lvl. support IAM program topics			

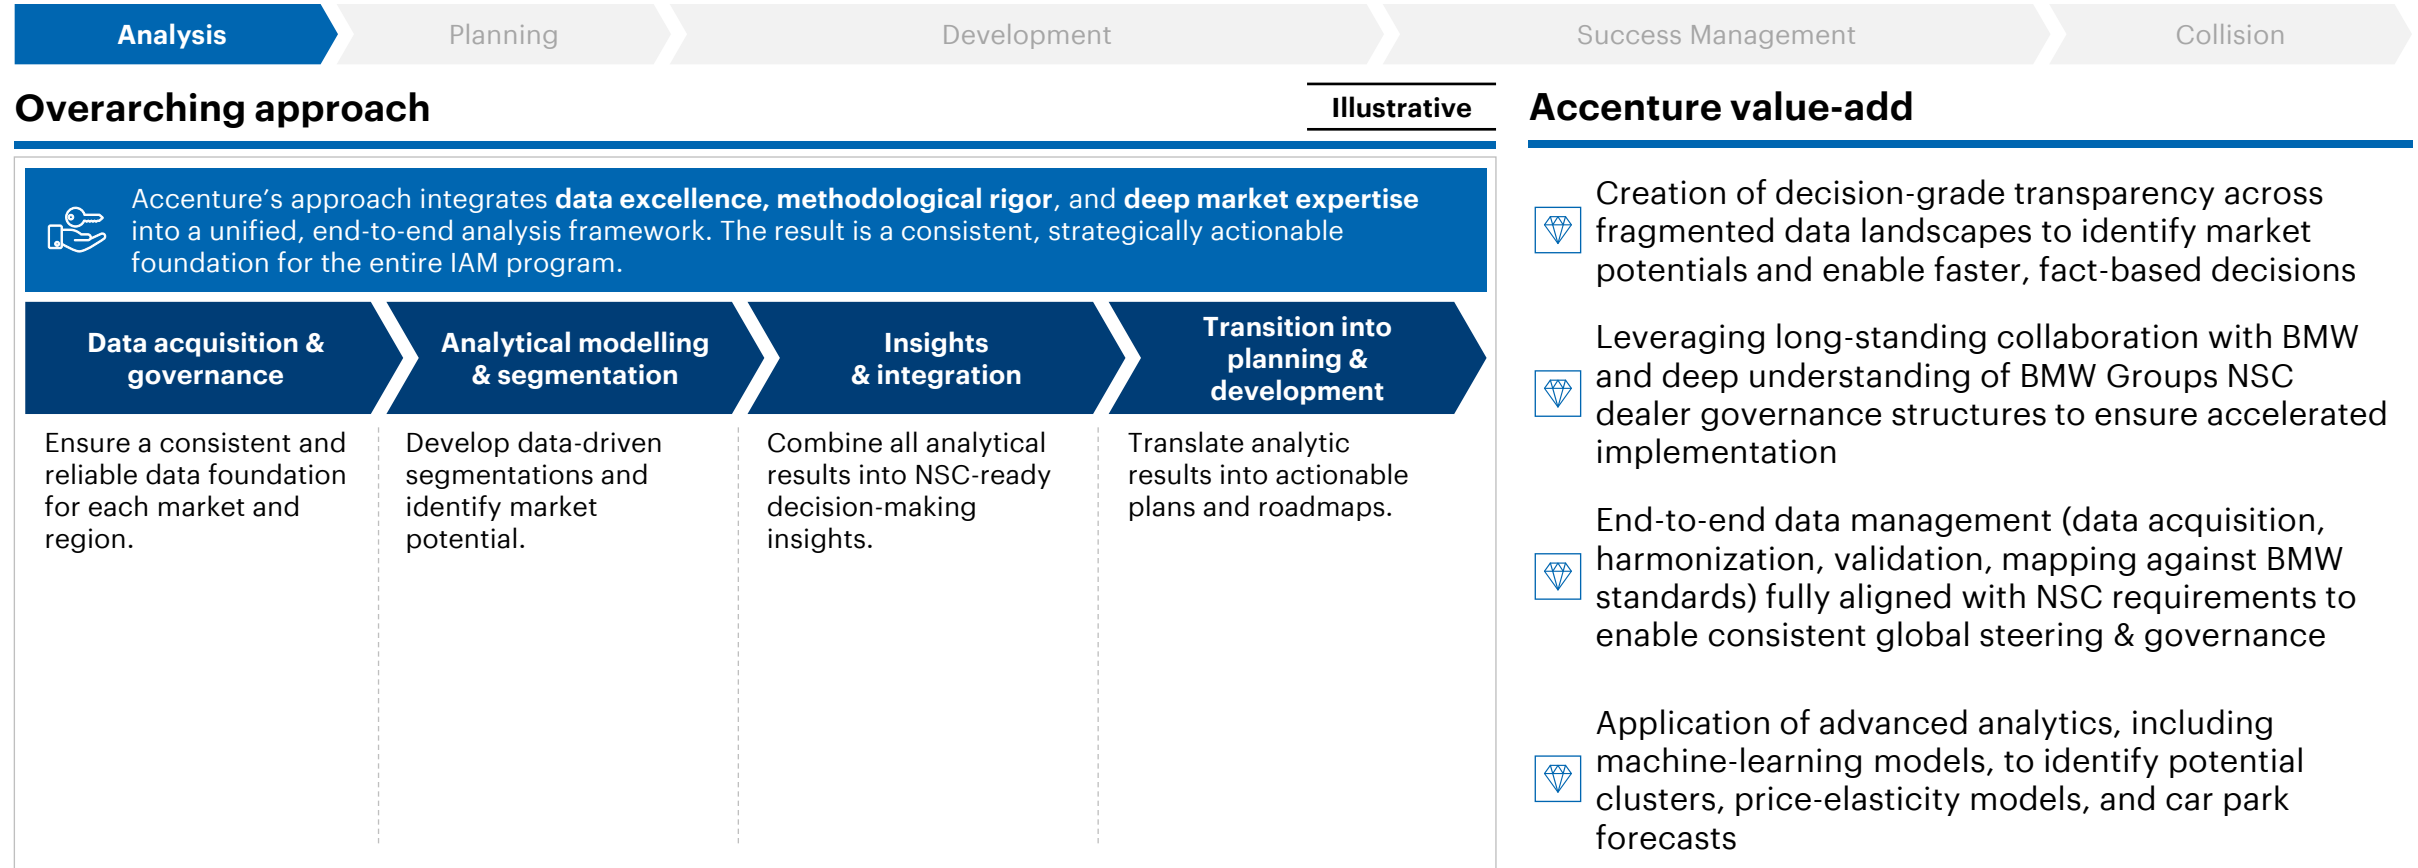

3.1

Joint approach

Analysis

Accenture's integrated analysis framework for the IAM tender program

Detailed insights on the following slides

The IAM market represents a significant untapped revenue pool for BMW

Analysis

Planning

Development

Success Management

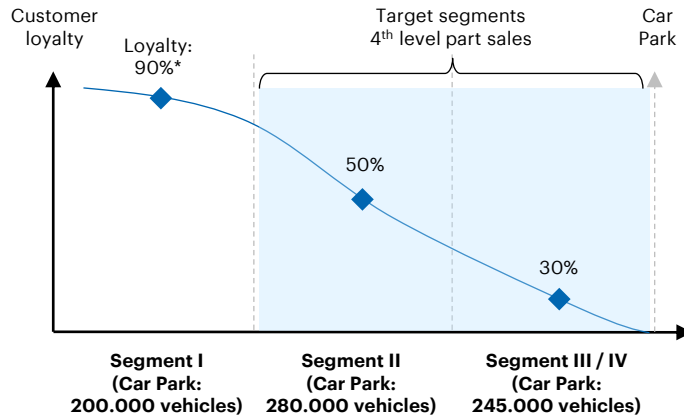

Collision

01 02 03 04 05 06 07 08 09 Market segmentation

Approach to assess the status quo

Illustrative

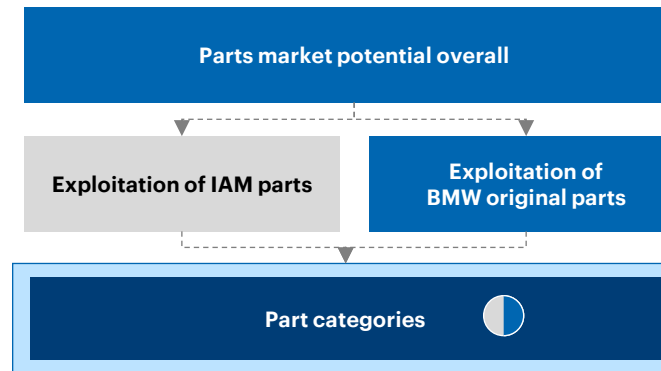

Define structural IAM opportunity

- As vehicles get older, customer loyalty to OEM authorized dealers drops
- **Analyze car park structure** and aging dynamics to quantify structural IAM demand
- **Assess loyalty shift** from OEM to independent repairers by vehicle age
- Identify structurally relevant **vehicle segments driving IAM volume**

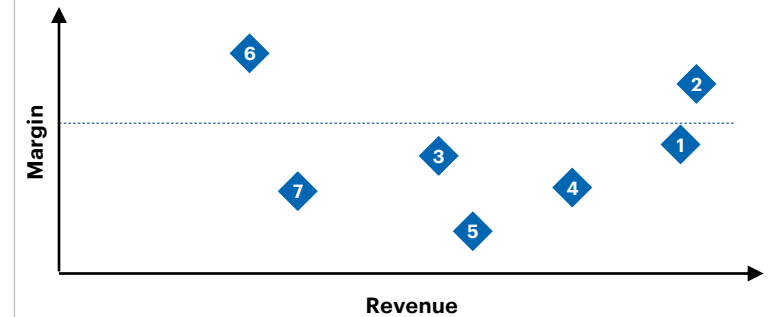

Quantify total addressable IAM market

Deep dive on next slide

- Derive **IAM market volume** using car park, mileage and accident data
- Segment total addressable market by part category, vehicle age and region
- Measure **BMW penetration vs. total market** to identify white spots and **residual potential**

Evaluate attractiveness and growth fields

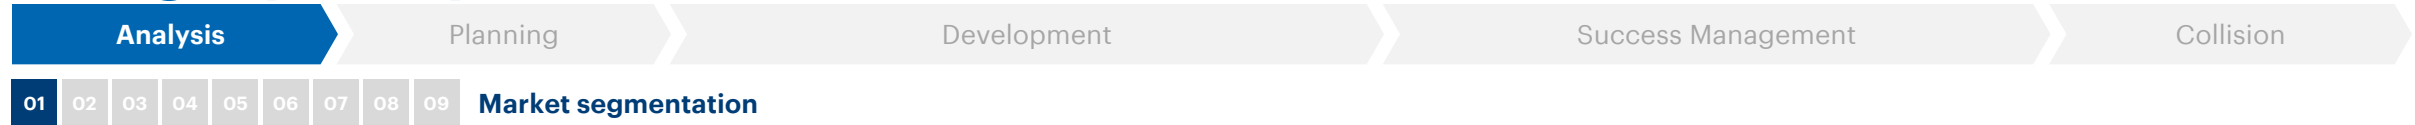

Captive / Competitive

- 1 Repair
- 2 Accident
- 3 Wear & tear
- 4 Electronic
- 5 Wheels & tires
- 6 Chemicals / oil
- 7 Others

- Assess **revenue pool size** and **margin attractiveness** per **parts** category
- Differentiate **captive vs. competitive** categories to define strategic positioning
- Quantify **residual potential per category** as basis for prioritization

Assessing the full IAM market potential through structured segmentation, category analysis, and benchmark-based evaluation

Quantify total addressable IAM market

Illustrative

General requirements:

- Minimum value: Service market exhaustion of dealers
- Geographical range of the dealer (km)
- Workshop capacity utilization

Parts market potential overall

- Driven kilometers in target market
- Accident statistics: Number of accidents, BMW share of accident business, severity of the accident, etc.
- Car Park (segments)

Exploitation of IAM parts

- Turnover in specific categories in target market

Exploitation of BMW original parts

- Turnover in specific categories in target market

Field analysis as a further measure for exploiting potential

ABC analysis and analysis of the monopoly and competitive parts as a further measure for potential identification

Introduction of a performance benchmark to compare traders and their target definition

Turning IR heterogeneity into targeted growth through a structured ABC segmentation approach

Customer segmentation

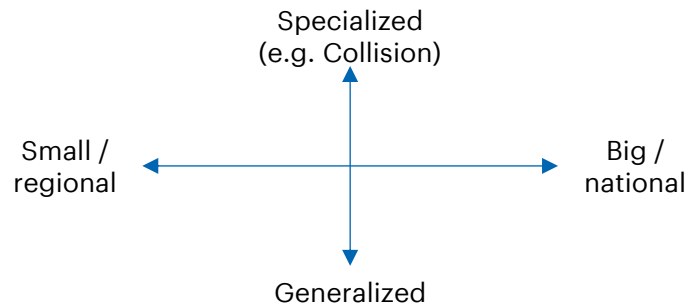

Identify the IAM market potential and scale

Illustrative

By first **creating transparency on IR heterogeneity** (A), then **quantifying economic relevance** through data-driven prioritization (B), and finally **translating insights** into differentiated **sales and coverage models** (C), BMW can systematically allocate IAM resources to priority and growth accounts while efficiently managing the long-tail

A

Understand structural differences of IRs

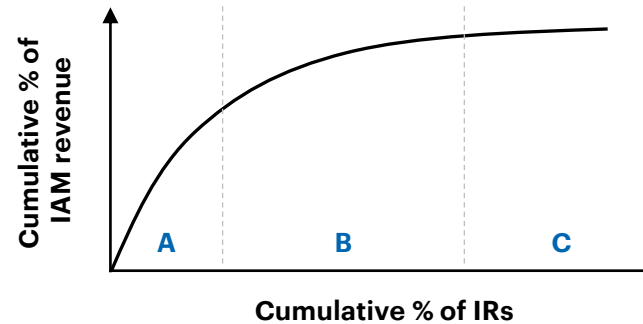

IR clustering criteria:

- Brand perception
- IT attitude
- Price sensitivity
- Number of parts purchased per month
- Number of invoices per month

B

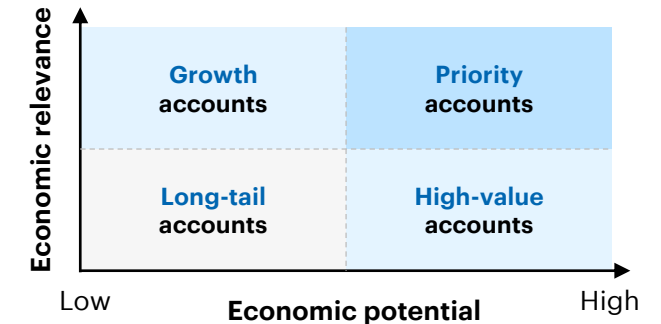

Identify economically relevant clusters

- Rank IRs by BMW revenue, margin and growth contribution
- Conduct ABC/Pareto analysis to reveal concentration effects
- Quantify share of revenue captured by top IR segments
- Identify high-impact clusters vs. long-tail structure

C

Translate into differentiated strategies

- Align incentives and sales intensity with economic relevance
- Allocate resources based on growth potential and profitability
- Define tailored value propositions per segment

Dealer performance gaps highlight immediate levers for IAM growth and targeted improvement

09

Dealer analysis

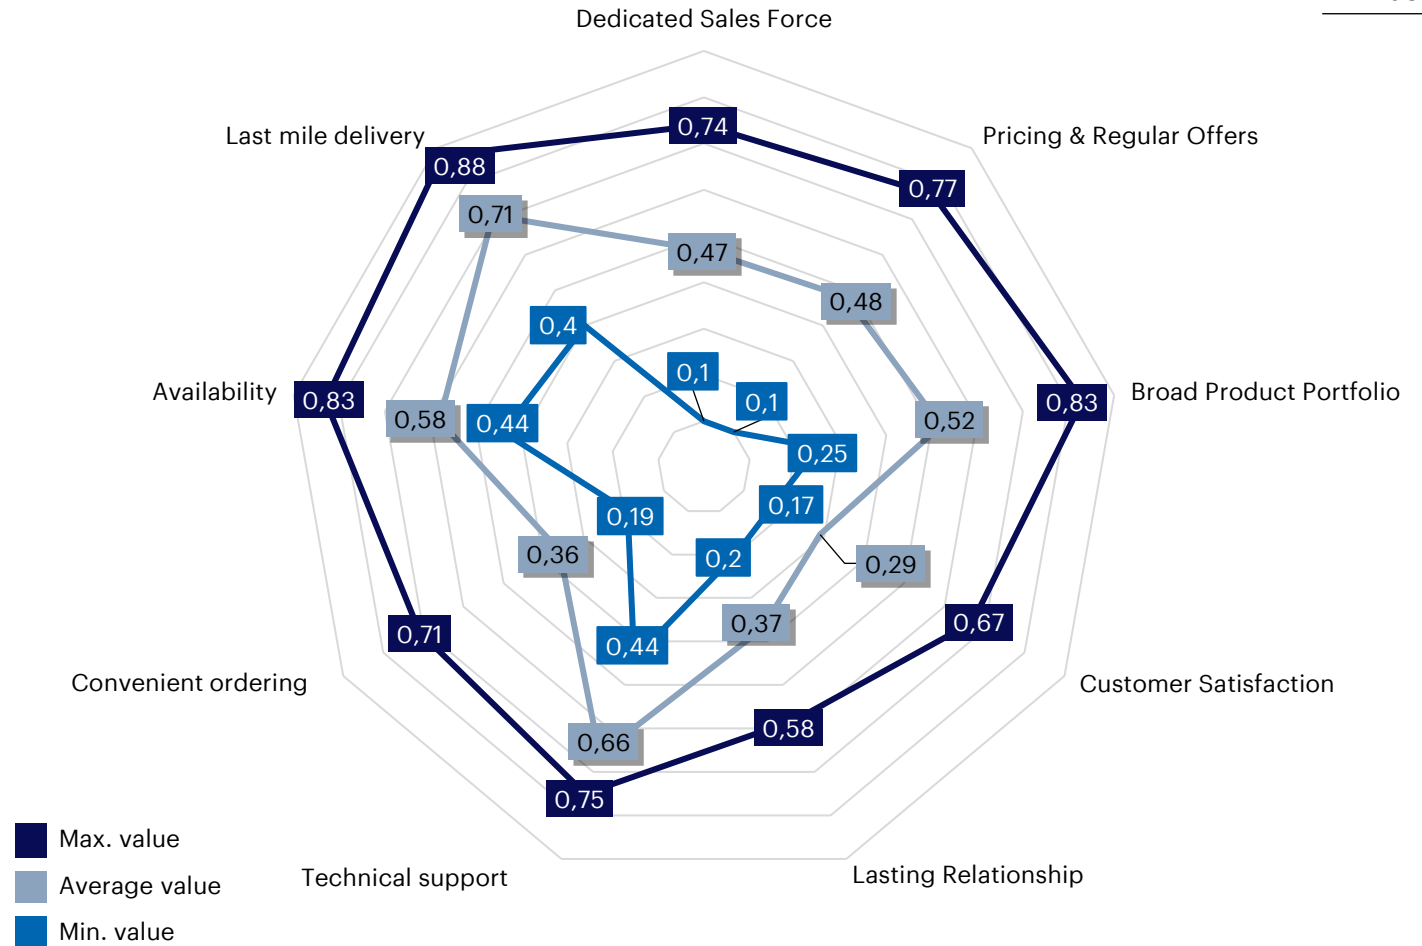

360° dealer performance assessment

- Define key aspects of the dealer assessment in terms of measures of performance
- Develop and identify targets to compare current performance of involved dealers
- Compare the degree of gap (difference between dealers) and describe as appropriate
- Determine action plans along the previously identified market/ dealer maturity
- Classify dealer into category A / B / C and apply differentiated approach accordingly

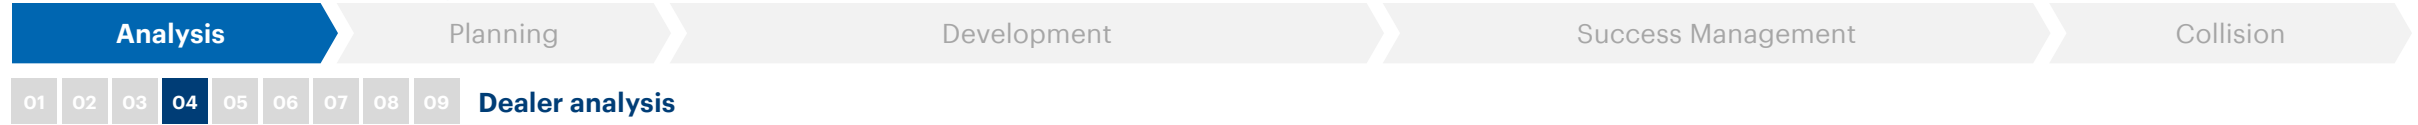

Benefits

- Identification of market/ dealer maturity through quantitative KPIs
- Possibility to address the greatest gaps/ differences between dealers first due to efficient prioritization
- Creation of individual market/ dealer action plans and training materials

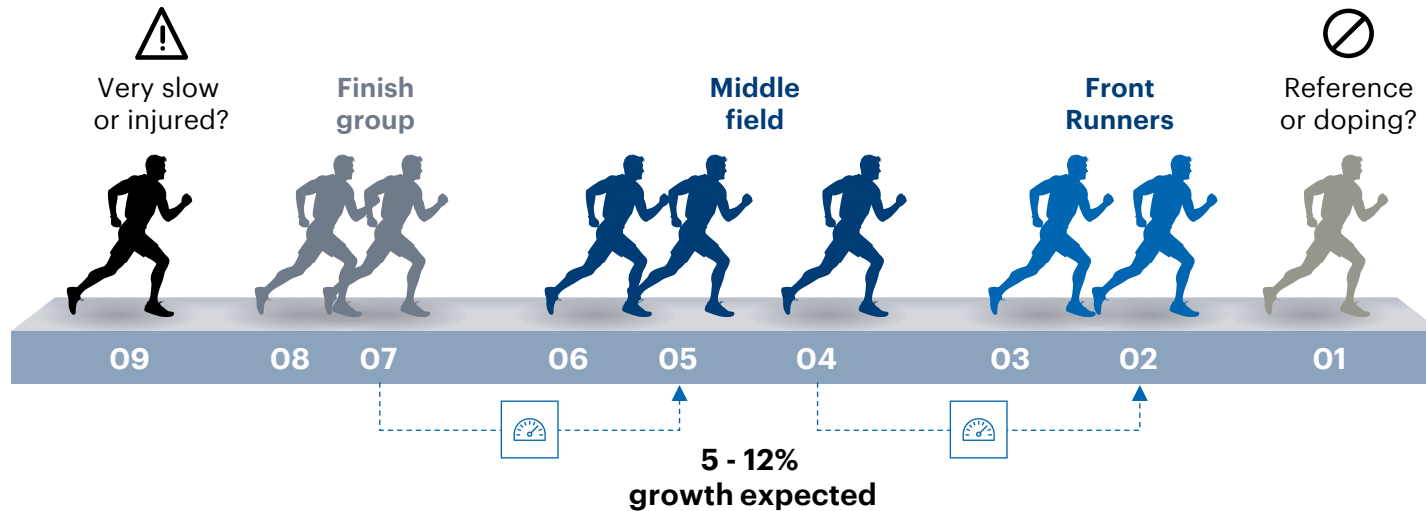

Illustrative

To systematically close identified performance gaps, the Runners benchmarking approach can be applied

Runners approach

* Dependent on market (dealer spread)

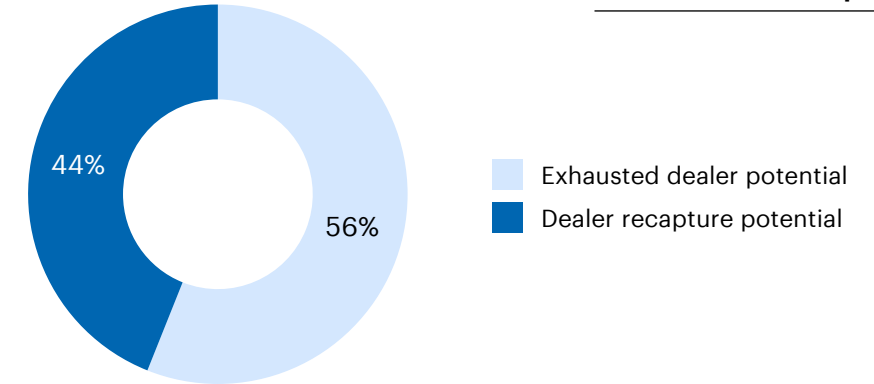

The approach intends to take the dealer to the next level of performance within the dealer network with the aim of increasing parts sales to IRs. This approach is especially relevant for realizing potentials in maturing markets.

What is the approach?

- The TOP 10% and the lower 10% of dealers are usually not considered
- The remaining 80% of dealers are divided into quartiles
- The aim for each dealer is to reach the average level of the next quartile

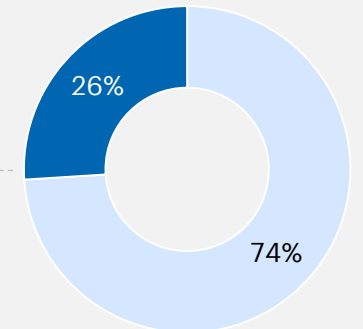

4th Level Performance

Illustrative example

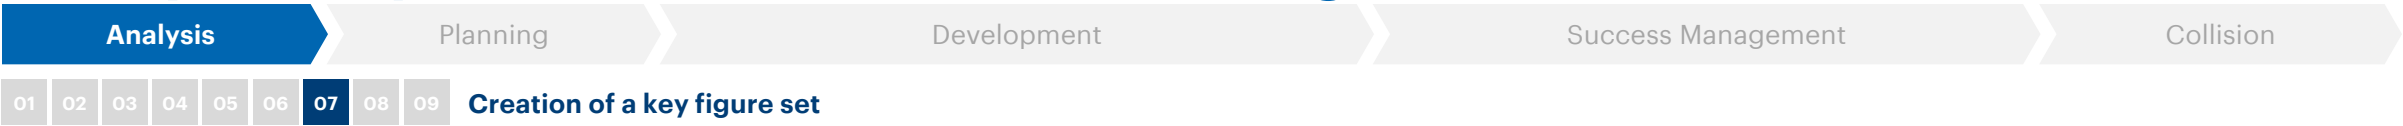

Independent repairer potential still to be unlocked

What BMW already capture today

A structured KPI framework ensures financial impact, white-space transparency and sustainable IAM steering

KPI catalogue aligned with tender expectations and enhanced by Accenture expertise

Our goal is to implement a harmonized evaluation framework and a globally consistent KPI set for all markets and dealers

Quantitative KPIs (Outcome, Market Potential, Productivity)		Qualitative KPIs (Governance, Customer, Operational Discipline)	
A	Performance & financial impact (outcome KPIs) • IAM revenue & growth vs. target • IAM penetration rate (IAM share of total parts business) • IAM gross margin vs. target	E	Operational & commercial excellence • Pricing discipline & governance compliance • Digital tool adoption (e.g., PartsLink24 usage depth, feature adoption) • Order process quality (first-time-right, process adherence) • Technical support capability (SLA fulfillment for dealer/IR support) • Commercial steering routines in place (cadence of reviews/KPI adherence/ action-tracking effectiveness)
B	Market & potential realization (white-space KPIs) • Sales vs. cocol car-park potential (capture rate) • Customer base quality (basket size, frequency, loyalty) • IR coverage rate within dealer territories • New IR acquisition rate	F	Relationship & market positioning • Communication quality with NSC (on-time delivery of materials/rework rate/acceptance/approval rate) • Perceived value proposition vs. competitors
C	Operational productivity & commercial efficiency • Pricing realization vs. recommended retail price (RRP) • Parts availability rate (ATP/ATS) • Delivery performance (OTIF – On-Time-In-Full)	G	Operational & commercial excellence • Dedicated IAM sales setup (roles, responsibilities, clarity) • IAM sales resource qualification (training completion, certification level) • CRM usage & data quality discipline (completeness, accuracy, freshness) • Steering cadence & governance quality
D	Success-management mandatory • PL24 performance KPIs (sales, share, usage, interface activity, campaign impact) • CDH timeliness (uploads ≤7 working days after month-end) • Data transfer SLA compliance (BMW-internal formats & timing) • eVKU/IAM marketing portal quality test KPIs: validation pass rate/error rate/ central steering coverage KPIs: Regional reporting completeness/ parts basket governance metrics/ toolbox deployment status		

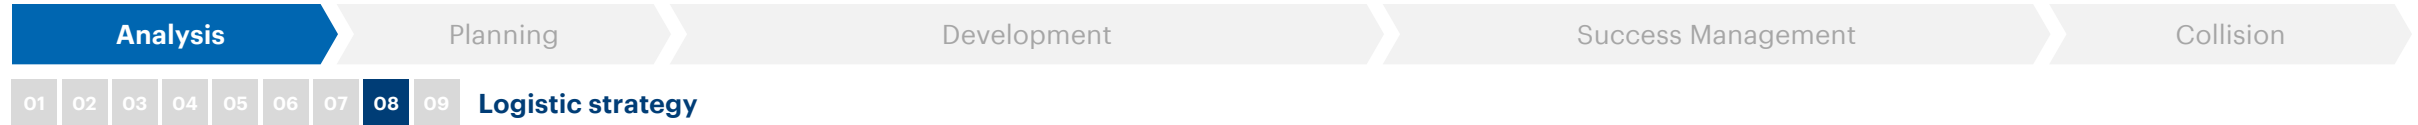

The KPI set serves as the **backbone of a global steering-cockpit** approach, **empowering dealers** and markets with **consistent, actionable, and timely performance insights**.

■ BMW standard KPI

■ Accenture additional KPI set

■ Dealer KPI, not available to market

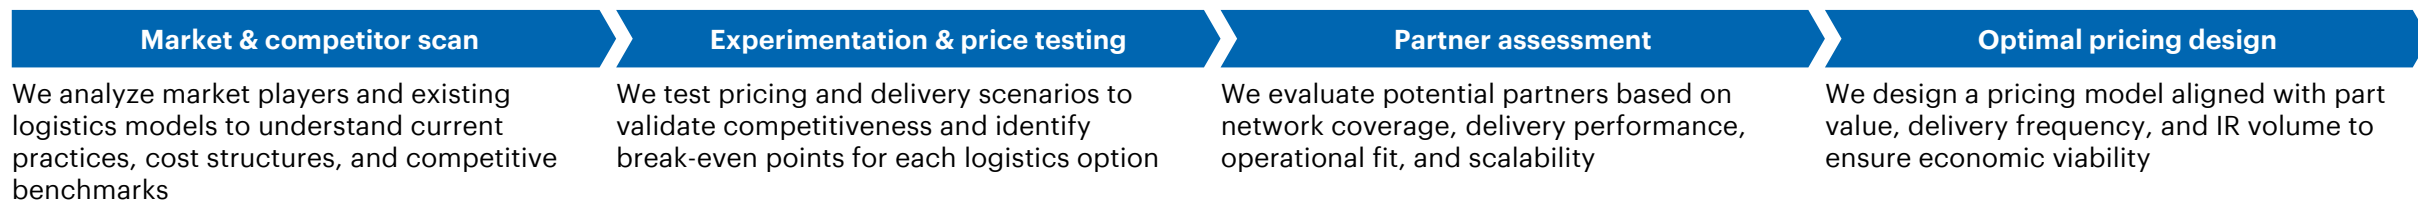

Defining the optimal logistics strategy across four delivery models

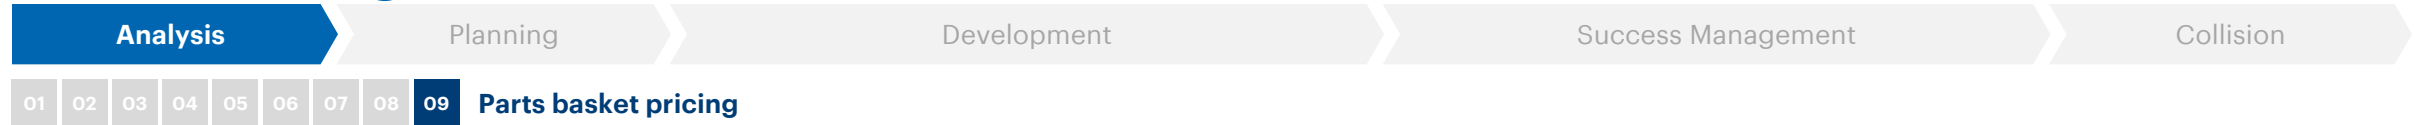

Evaluation of four logistics options with a recommended shift toward logistics cooperation and the consignment model

A Own logistics via dealer vehicles	B Courier service	C Logistics cooperation with other OES suppliers	+ D Consignment model
• Dealer operates own delivery vehicles • Orders placed via ATLAS • 1–3 deliveries per day, depending on agreement and volume ✓ High flexibility in scheduling and routing ✓ Low variable cost per delivery ✗ Higher operational effort (fleet, drivers, planning) ✗ Fixed costs regardless of volume	• No own vehicles; full outsourcing to a courier • Suitable for ad-hoc or emergency deliveries ✓ Minimal internal workload (fully outsourced) ✓ Fast implementation, no upfront investments ✗ High cost per shipment, esp. for low-value items ✗ Limited cost efficiency for recurring or high-volume deliveries	• OES parts are transported using existing OEM dealer routes • Service is invoiced cross-OEM ✓ Lowest overall logistics cost due to shared routes ✓ No additional fleet or planning effort required ✗ Dependency on OES dealer route frequency and timing	• High-frequency, low-value parts (e.g., maintenance & wear items) are stocked at the service location • Inventory owned by OEM dealer until consumed ✓ Higher parts availability increased sales ✓ Significant logistics cost reduction, Ideal for large IRs (~60–70% of volume) ✗ Requires initial stock setup and continuous inventory monitoring ✗ Not suitable for high-value, slow-moving parts
Recommended			

Consignment model approach

A data-driven parts model translates market signals into actionable pricing and steering

Enable basket intelligence

Input

- Sell-out data (competitive intensity)
- Car models
- Market price potentials (based PCIs)
- Insights from OEM benchmark & online benchmarks
- IAM Index
- Potential analysis

Selection engine

- Identify best-fitting parts according to rule-set

Output

- Price definition:
 - Dealers' parts basket **sales support recommendation**
- Strategic basket definitions:
 - Competitive baskets
 - Core maintenance baskets
 - High-margin specialist baskets
 - Thematic / campaign baskets

Turn basket types into pricing rules

Illustrative

	Maintenance	Wear	Repair	Body & Accident	Electric
Part type	Captive	Competitive			
Net contribution	<10%	10–20%	>20%		
Cannibalization risk	Low				High
Competitive index	< 1.10	1.10 – 1.25	> 1.25		
Age segment	II	III	IV		

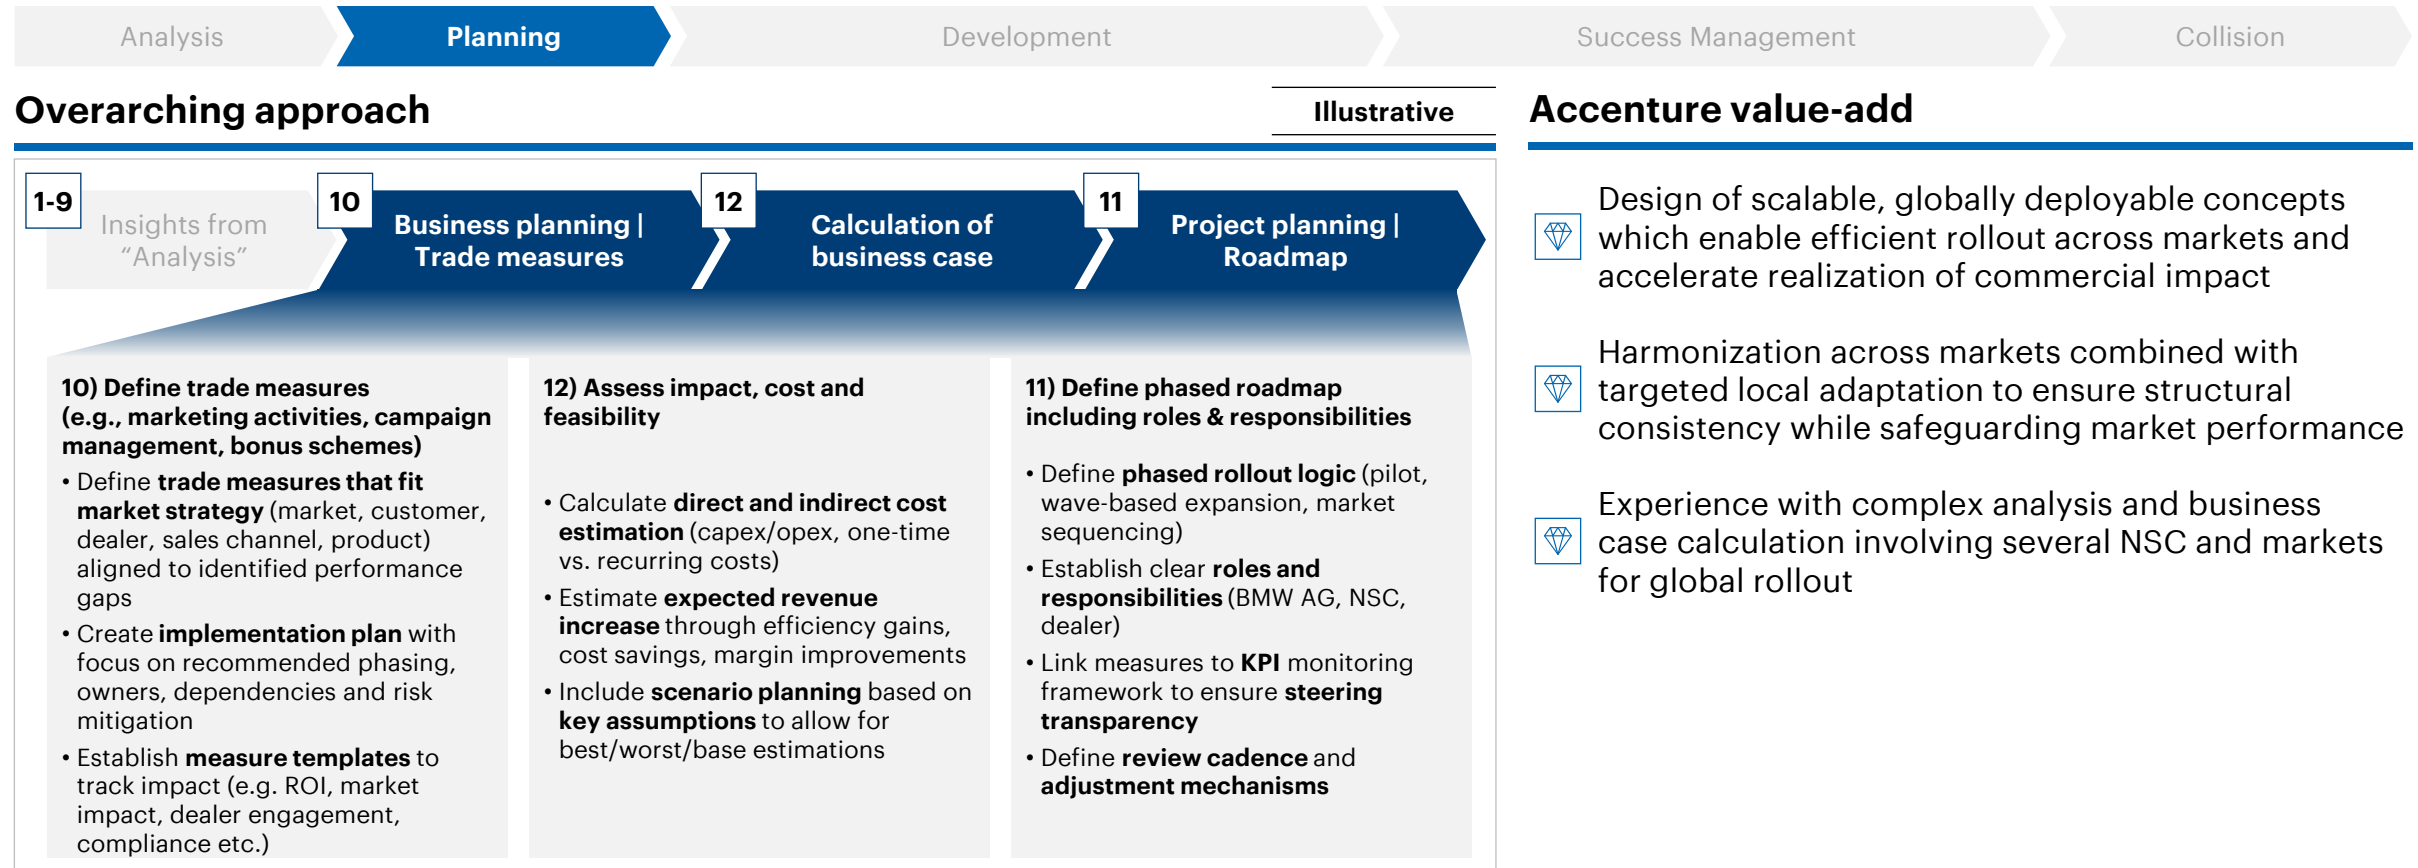

3.2

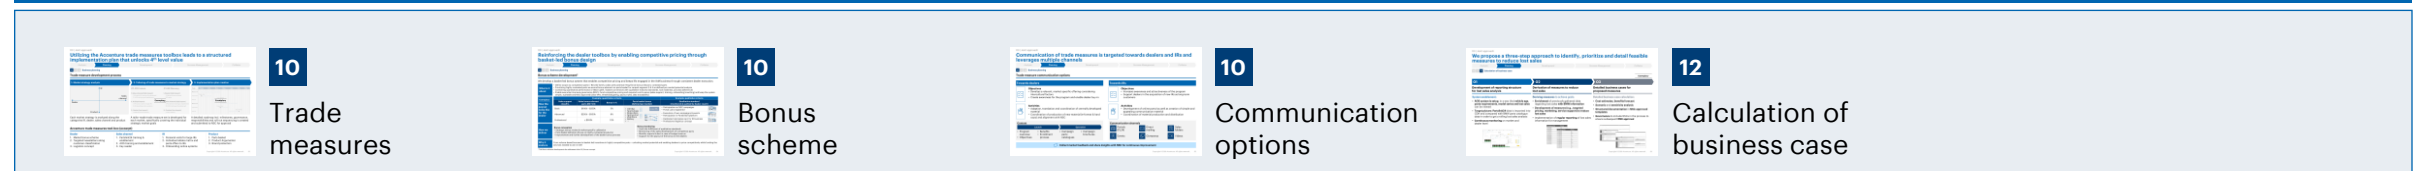

Joint approach

Planning

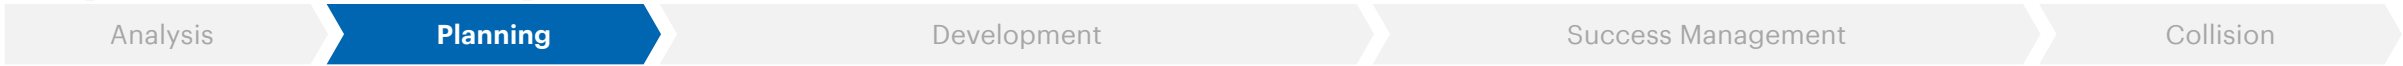

Translating IAM insights into a structured, economically sound action plan

Detailed insights on the following slides

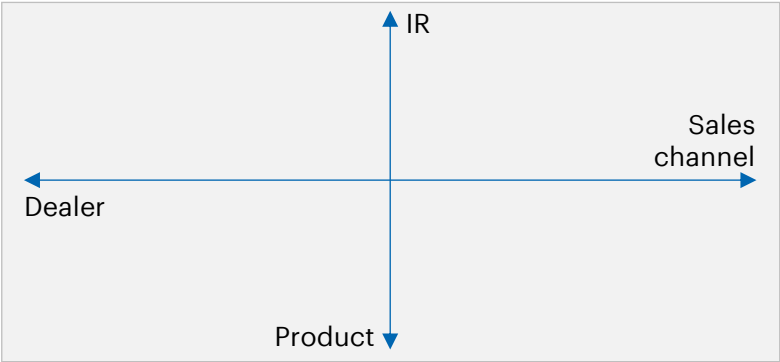

Utilizing the Accenture trade measures toolbox leads to a structured implementation plan that unlocks 4th level value

10 11 12 Business planning

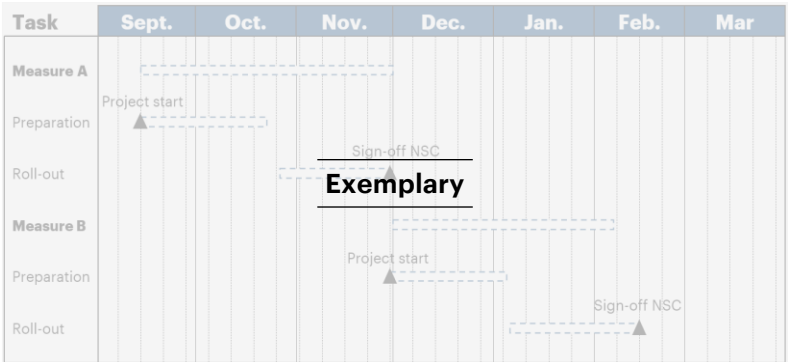

Trade measure development process

Each market strategy is analyzed along the categories IR, dealer, sales channel and product

C1-FR France	C1-NE Norway
1. Sales channel (high impact) 1) Partslink24 training & enablement 2) AOS training and enablement	1. Dealer (high impact) 1) Market bonus scheme 2) Events
2. IR (high impact) 1) Personal visits for large IRs 2) Onboarding online systems	2. Sales channel (high impact) 1) Partslink24 training & enablement 2) AOS training and enablement
3. Dealer (low impact) 1) Market bonus scheme	3. Product (low impact) 1) Parts basket

A tailor-made trade measure set is developed for each market, specifically covering the individual strategic market goals

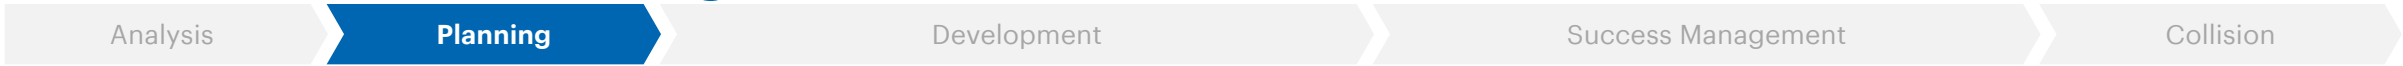

A detailed roadmap incl. milestones, governance, responsibilities and rollout sequencing is created and submitted to NSC for approval

Accenture trade measures toolbox (excerpt)

Dealer	Sales channel	IR	Product
1. Market bonus scheme 2. Targeted newsletters along customer classification 3. Logistics concept	1. Partslink24 training & enablement 2. AOS training and enablement 3. Key reader	1. Personal visits for large IRs 2. Individual rebate matrix and parts offers to IRs 3. Onboarding online systems	1. Parts basket 2. Product Argumenter 3. Brand protection

Reinforcing the dealer toolbox by enabling competitive pricing through basket-led bonus design

Bonus scheme development¹

We develop a basket-led bonus system that enables competitive pricing and keeps IRs engaged in the IAM business through consistent dealer execution.

What is it about	• Define scope via competitive parts (> BD 23)/ family codes with potential: Ring-fence bonus-relevant, contested parts • Prioritizing highly-contested parts as second bonus element via parts basket for carpark segment 3 & 4 as defined per market/potential analysis • Combining quantitative performance (> BD23 uplift / basket conversion) with qualitative maturity (standards, tool readiness, process adherence) • Enable execution & ensure governance (NSC): Fund competitive pricing and required cost-to-serve (sales support, training, onboarding/coaching) and keep the system simple, auditable and NSC-approved (clear KPIs, thresholds/gating, payout rules, data traceability)				
Exemplary How the payout looks like for the dealer	Example: quantitative criteria				Example: qualitative criteria
	Sales support classific.	Sales bonus relevant parts (BD +23)	Bonus in %	Parts basket bonus (defined per market)	Qualitative standard (monitored & audited by dealer coach)
	Basic	\$100k – \$250k	5%	• Oil filter • Spark plugs • Brake discs • Spring strut • Wishbone • Battery • ... ☒ ☒ ☒ ☒ e.g. 8%	• Participation on NSC campaigns • Portal users registered
	Advanced	\$250k – \$500k	8%		• Execution of own campaigns & events • Participation in Partslink24 platform
	Professional	≥ \$500k	10%		• Dedicated role (sales rep.) for IR business • Professional logistics concept
How we deliver	Bonus conception • Strategic bonus review & market-specific calibration • Parts basket definition (focus on highly-contested products) • Improvement and further development of the dealer bonus process			Bonus monitoring • Audit the fulfillment of qualitative standards • Monitoring of the sales development of competitive parts • Monthly reports & alert in case of budget overrun • Support for the payout of the bonus to the dealers	
	Why it matters				
From volume-based bonuses to basket-led incentives in highly competitive parts – unlocking market potential and enabling dealers to price competitively while funding the services needed to win in IAM					

¹ This Bonus scheme development also addresses ticket 19 | Bonus concept.

Communication of trade measures is targeted towards dealers and IRs and leverages multiple channels

10 11 12 **Business planning**

Trade measure communication options

Towards dealers

Objectives

- Develop a relevant, market-specific offering considering intercultural factors
- Create awareness for the program and enable dealer buy-in

Activities

- Adaption, translation and coordination of centrally developed material
- Coordination of production of new material (e-format & hard copy) and alignment with NSC

Content

Launch

- Program overview
- Objectives
- Benefits
- Enrollment process

Operation

- Campaign parts catalogues
- Campaign brochures

Towards IRs

Objectives

- Increase awareness and attractiveness of the program
- Support dealers in the acquisition of new IRs as long-term customers

Activities

- Development of online portal as well as creation of simple and appealing communication material
- Coordination of material production and distribution

Communication channels

Portals
(PL24)

Direct
mailing

Sales
folders

Events

Giveaways

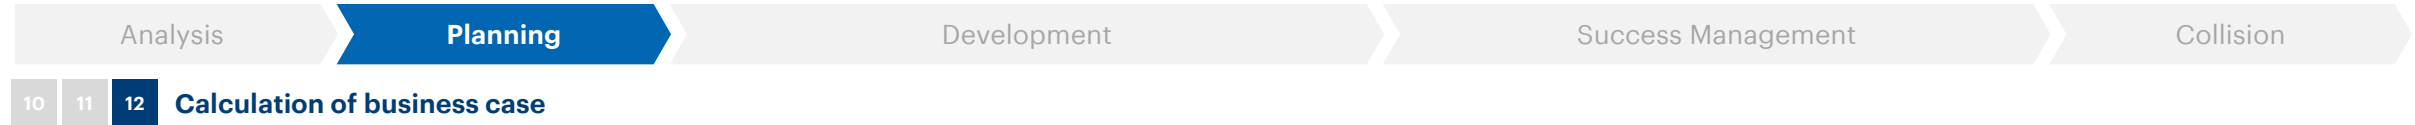

Videos

Collect market feedback and share insights with NSC for continuous improvement

We propose a three-step approach to identify, prioritize and detail feasible measures to reduce lost sales

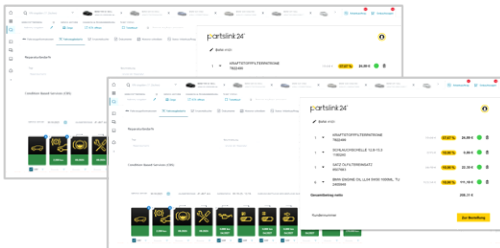

Exemplary

01

Development of reporting structure for lost sales analysis

System enablement:

- **AOS system is setup**, in a way that **vehicle age, parts requirements, model series and lost sales** can be viewed
- **Target picture: Partlink24** data is imported into CDH and compared with BMW parts catalogue data in order to get a rolling lost sales analysis
- **Continuous monitoring** on market and dealer level

02

Derivation of measures to reduce lost sales

Deriving measures to achieve goals:

- **Enrichment** of previously gathered data regarding lost sales **with BMW information**
- **Development of measures (e.g., targeted pricing, marketing, service support) to reduce lost sales**
- Implementation of **regular reporting** of lost sales information for management

Lost sales part list	Priority
Part #1586023063	Low
Part #5325325325	High
Part #1586023063	Low
Part #1586023063	High
Part #1586023063	Medium
Part #1586023063	Low
Part #1586023063	High
Part #1586023063	Medium
Part #1586023063	Low
Part #1586023063	High
Part #1586023063	Medium
Part #1586023063	Low
Part #1586023063	High
Part #1586023063	Medium
Part #1586023063	Low
Part #1586023063	High
Part #1586023063	Medium
Part #1586023063	Low

03

Detailed business cases for proposed measures

Detailed business case calculation:

- **Cost estimates, benefits forecast**
- **Scenario and sensitivity analysis**
- **Structured documentation in NSC-approved templates**
- **Governance** to include NSCs in the process to ensure subsequent **NSC approval**

3.3

Joint approach

Development

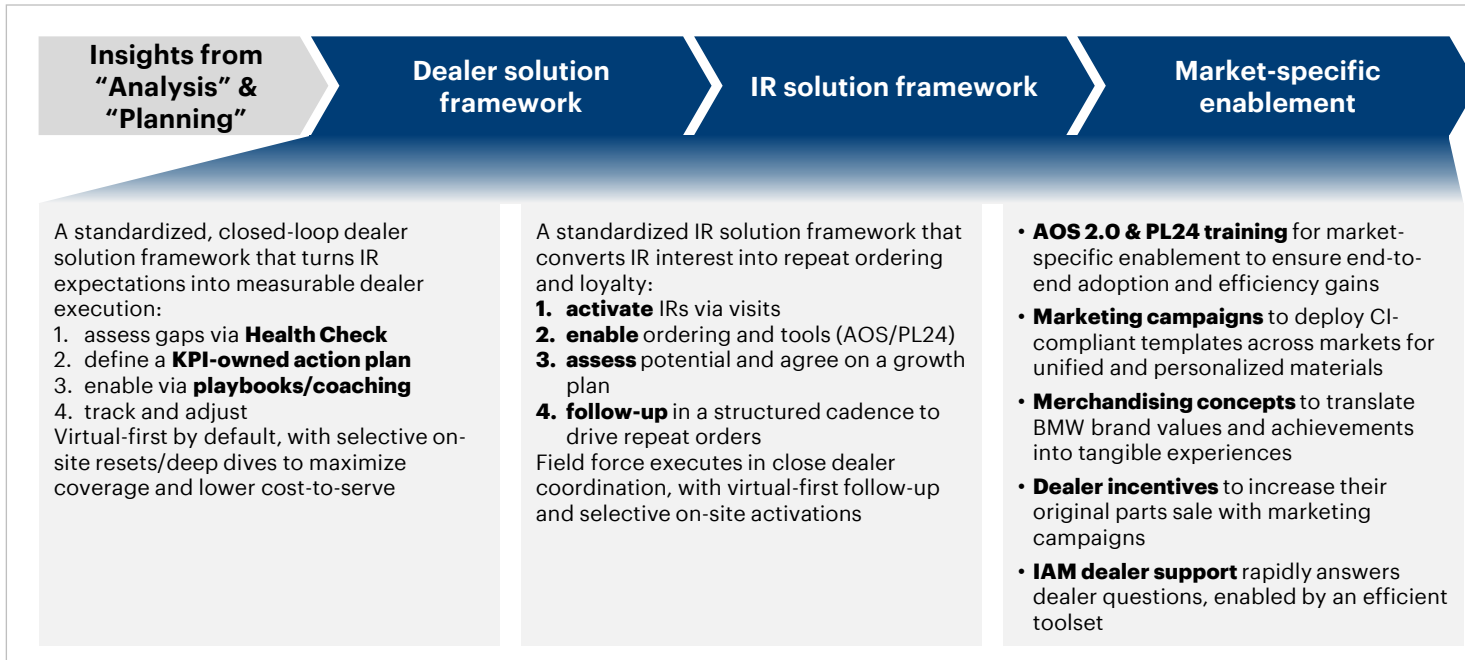

Development and implementation of targeted measures across the IAM

Overarching approach

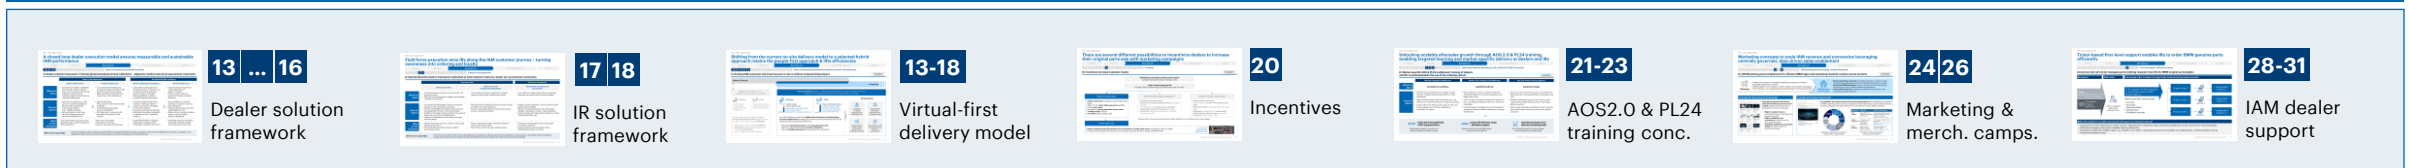

Illustrative

Accenture value-add

- ◆ Closed-loop execution model supported by practical dealer toolset to translate strategy into measurable dealer performance increase
- ◆ Hybrid delivery design increasing touchpoints while structurally lowering cost-to-serve
- ◆ Standardized IR conversion playbook aligned with dealer pricing logic to increase conversion and safeguard margin consistency
- ◆ Dedicated IAM dealer support toolset to improve operational efficiency, productivity and scalability across markets
- ◆ BMW-compliant marketing and merchandising campaigns enabling faster execution and higher conversion through consistent sales messaging

Detailed insights on the following slides

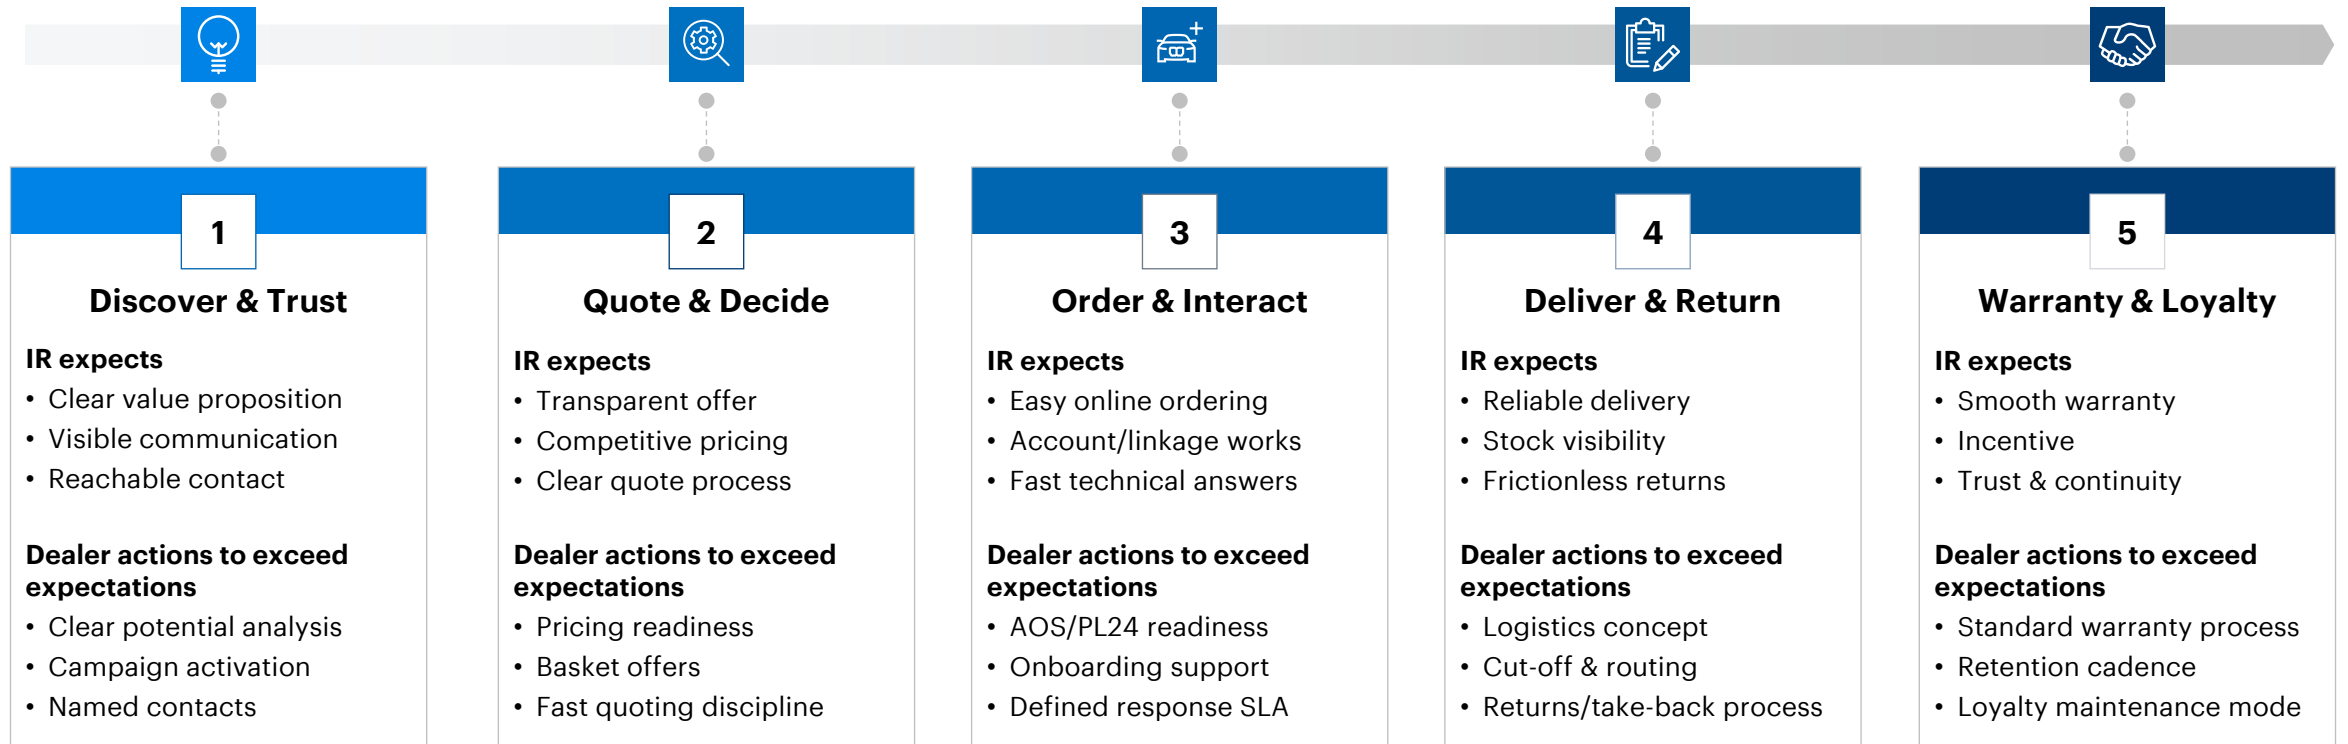

Accenture understands what matters to IRs and turns it into a dealer action blueprint for IAM

One consistent service standard for IRs across the entire customer journey

Conquest

Loyalty

Derived from 20+ years Aftersales experience

IAM execution is constrained by dealer capability and uneven IR experience — our hybrid approach, framework and enablement close the gap

Where IAM execution stands today

	Authorized dealer	IRs /garage chains
 IAM setup	• Role in 4th level: the execution engine that converts IAM strategy into a competitive offer for IRs • Key responsibilities: part sales, commercial readiness, digital enablement, service operations, customer management	• Role in 4th level: IRs choose suppliers based on speed, convenience, pricing, and reliability • What IRs expect: competitive and transparent pricing, clear value proposition & professional communication, simple onboarding & intuitive ordering, predictable service levels, consistent experience and proactive support
 Current pain points	• Limited transparency on IR customer structure and needs • Campaign activation tooling for personalized outreach is limited • Digital readiness varies (e.g., AOS/PL24 adoption) • Capability constraints (e.g., limited manpower) • Cost-to-serve pressure in logistics	• Awareness uneven (e.g., dealer outreach not consistently enabled across network) • Onboarding friction (e.g., inconsistent tool adoption) • Manual workarounds still occur (e.g., phone/ fax processes create delays) • Service experience not standardized (e.g., delivery handling can vary)

Our approach

A

Dealer solution framework
Standardized dealer framework turns IR needs into measurable dealer execution, NSC-aligned and auditable.

B

IR/Garage chain solution framework
Targeted IR measures remove friction from awareness to repeat ordering and loyalty.

C

Hybrid (physical / digital) -infused delivery model
Built on a digital backbone, our hybrid approach shifts training and follow-ups to remote — retaining touchpoints while reducing dependency on on-site visits and lowering cost-to-serve.

D

Market-specific enablement
Targeted training for end-to-end adoption and AI-driven support to drive efficiency.

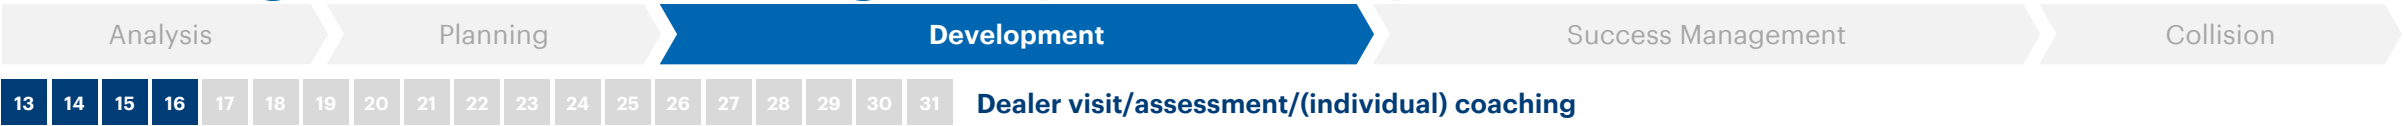

A closed-loop dealer execution model ensures measurable and sustainable IAM performance

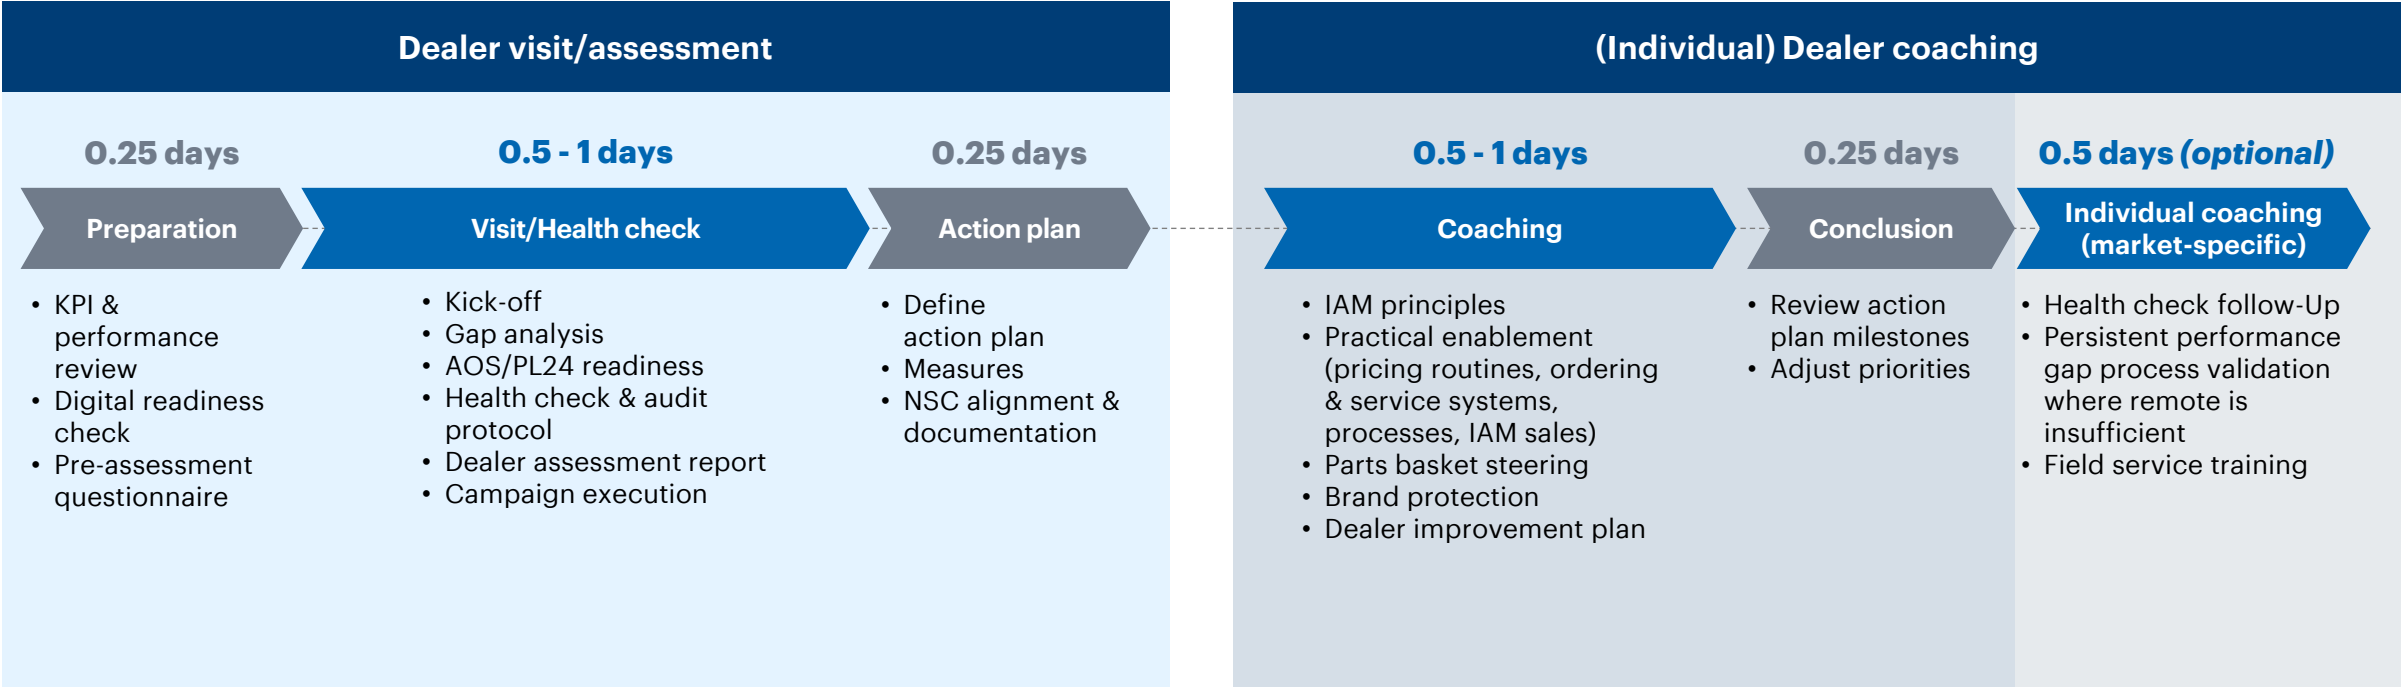

A: Dealer solution framework | It blends global standards & local calibration – aligned to market maturity & operational constraints

	Dealer visit/assessment		(Individual) Dealer coaching	
	Dealer health check	Targeted action plan	Dealer enablement & coaching	Review & follow-up
What it is about	- Assessment of dealer capabilities along the IR customer journey (e.g., communication and pricing) - Establish a quantitative & qualitative baseline (performance + process adherence)	- Turn assessment findings into prioritized measures linked to IAM growth levers & journey steps - Make execution measurable and owned (e.g., KPIs, milestones)	- Close skill/ process gaps and embed execution routines across key levers (pricing, ordering, service systems, IAM sales) - Build capabilities to deliver consistent performance uplift	- Ensure execution becomes a closed-loop (track → adjust → sustain) - Protect loyalty/ retention discipline through consistent follow-up
How we deliver	- Performance review (e.g., IAM turnover, portfolio assessment (family codes/categories)) - Training gap analysis (e.g., digital readiness) - Service maturity check (e.g., returns) & dealer report incl. sources uploaded to NSC	- Define milestones, KPIs, success criteria (measurable roadmap) - Co-developed with dealer (buy-in & feasibility) - NSC alignment + approval with traceable assumptions/ data sources	- Practical enablement (pricing routines, ordering & service systems, processes, IAM sales) - On-the-job coaching - Key topic workshops & trainings - Playbooks/ templates/ checklists to embed routines + capability build-up	- Accountability via monthly tracking vs. targets and action plan milestones - Evidence-based reporting, NSC upload/approval trail - Adjust actions, remove blockers, sustain routines (loyalty/ retention discipline)
What are the outcomes	Fact-based dealer maturity picture (baseline, gaps, evidence) ready for NSC governance	Approved, measurable improvement roadmap (ready for steering and follow-up)	Sustainable behavior change & performance uplift (routines embedded, capability improved)	Sustained execution discipline and loyalty retention (stable routines & governance trail)
Which role is responsible	Led by the dealer coach and executed with field force support (IR level) in close coordination with authorized dealers (e.g. pricing, campaigns, tool readiness). Dealer coach prioritizes rollout based on white spot targeting and market potential.			

Remote-first dealer coaching & execution program with targeted on-site coaching increases coverage, improves adoption and reduces cost-to-serve

A: Each dealer solution framework element has a predefined duration, outcome and delivery mode (remote / on-site) Exemplary

Contents are tailored to dealer maturity needs based on the gap analysis results and delivered in a hybrid cadence

Field force execution wins IRs along the IAM customer journey – turning awareness into ordering and loyalty

B: Standardized IR solution framework calibrated to each market’s maturity, dealer set-up and local constraints

	Customer Visit		Customer Assessment
	IR Activation Visit	Ordering & Tools Enablement (AOS/PL24)	IR Potential Assessment & Growth Plan
What it is about	• Create awareness and trust in the IAM offer and service promise • Make the value proposition tangible and establish a reliable contact path	• Turn interest into active ordering and repeat usage through simple, reliable tool access	• Focus effort on high-potential IRs and translate potential into owned actions with the dealer
How we deliver	• Visit playbook (IRs/Garage Chains): structured agenda, scripts, materials, outcomes • Communicate BMW and dealer value & services (campaigns/brochures) + service standards • Explain pricing logic (discount matrix by customer type) and current parts baskets/offers • Capture IR needs/barriers and align next steps with the dealer	• Onboard IRs into AOS/PL24 account setup, linking to dealer, first order guidance • Remove onboarding frictions (process questions, access, ordering workflow)	• Assess turnover potential + priority product areas (basket opportunities) • Define an actionable growth plan with dealer (targets, campaigns, timeline, responsibilities) • Track progress and refine actions based on results (closed-loop follow-up)
What are the outcomes	• Higher awareness and trust, clearer contact path, agreed next actions • Improved offer perception leads to higher quote/request rate	• Faster onboarding, higher AOS/PL24 adoption, shorter time-to-first-order • More repeat orders through reliable support	• Transparent prioritization and a measurable conversion roadmap • Larger baskets and more repeat orders, strengthening loyalty over time
Which role is responsible	Field Force executes IR visits using a standardized visit playbook, aligned with authorized dealers on pricing logic, campaigns and tool readiness. Garage Chain visit playbooks need to be refined together with each market (e.g. NSC role coordinates activities).		

A structured IR visit cadence turns first contact into ordering routines and loyalty

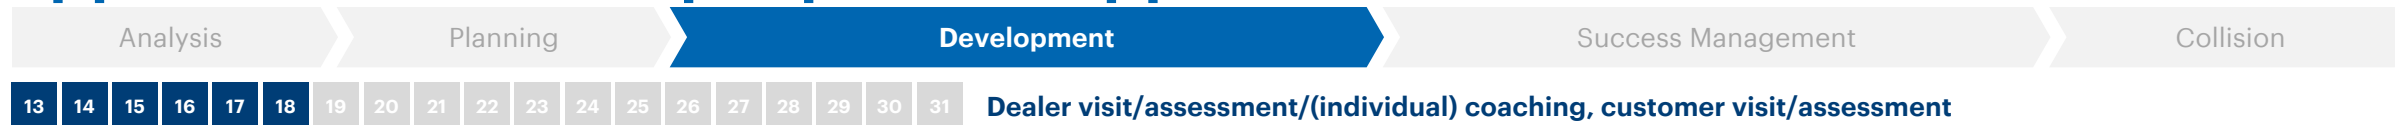

B: The frequency of visits and the scope of playbook components provided are determined by the size of IRs

Exemplary

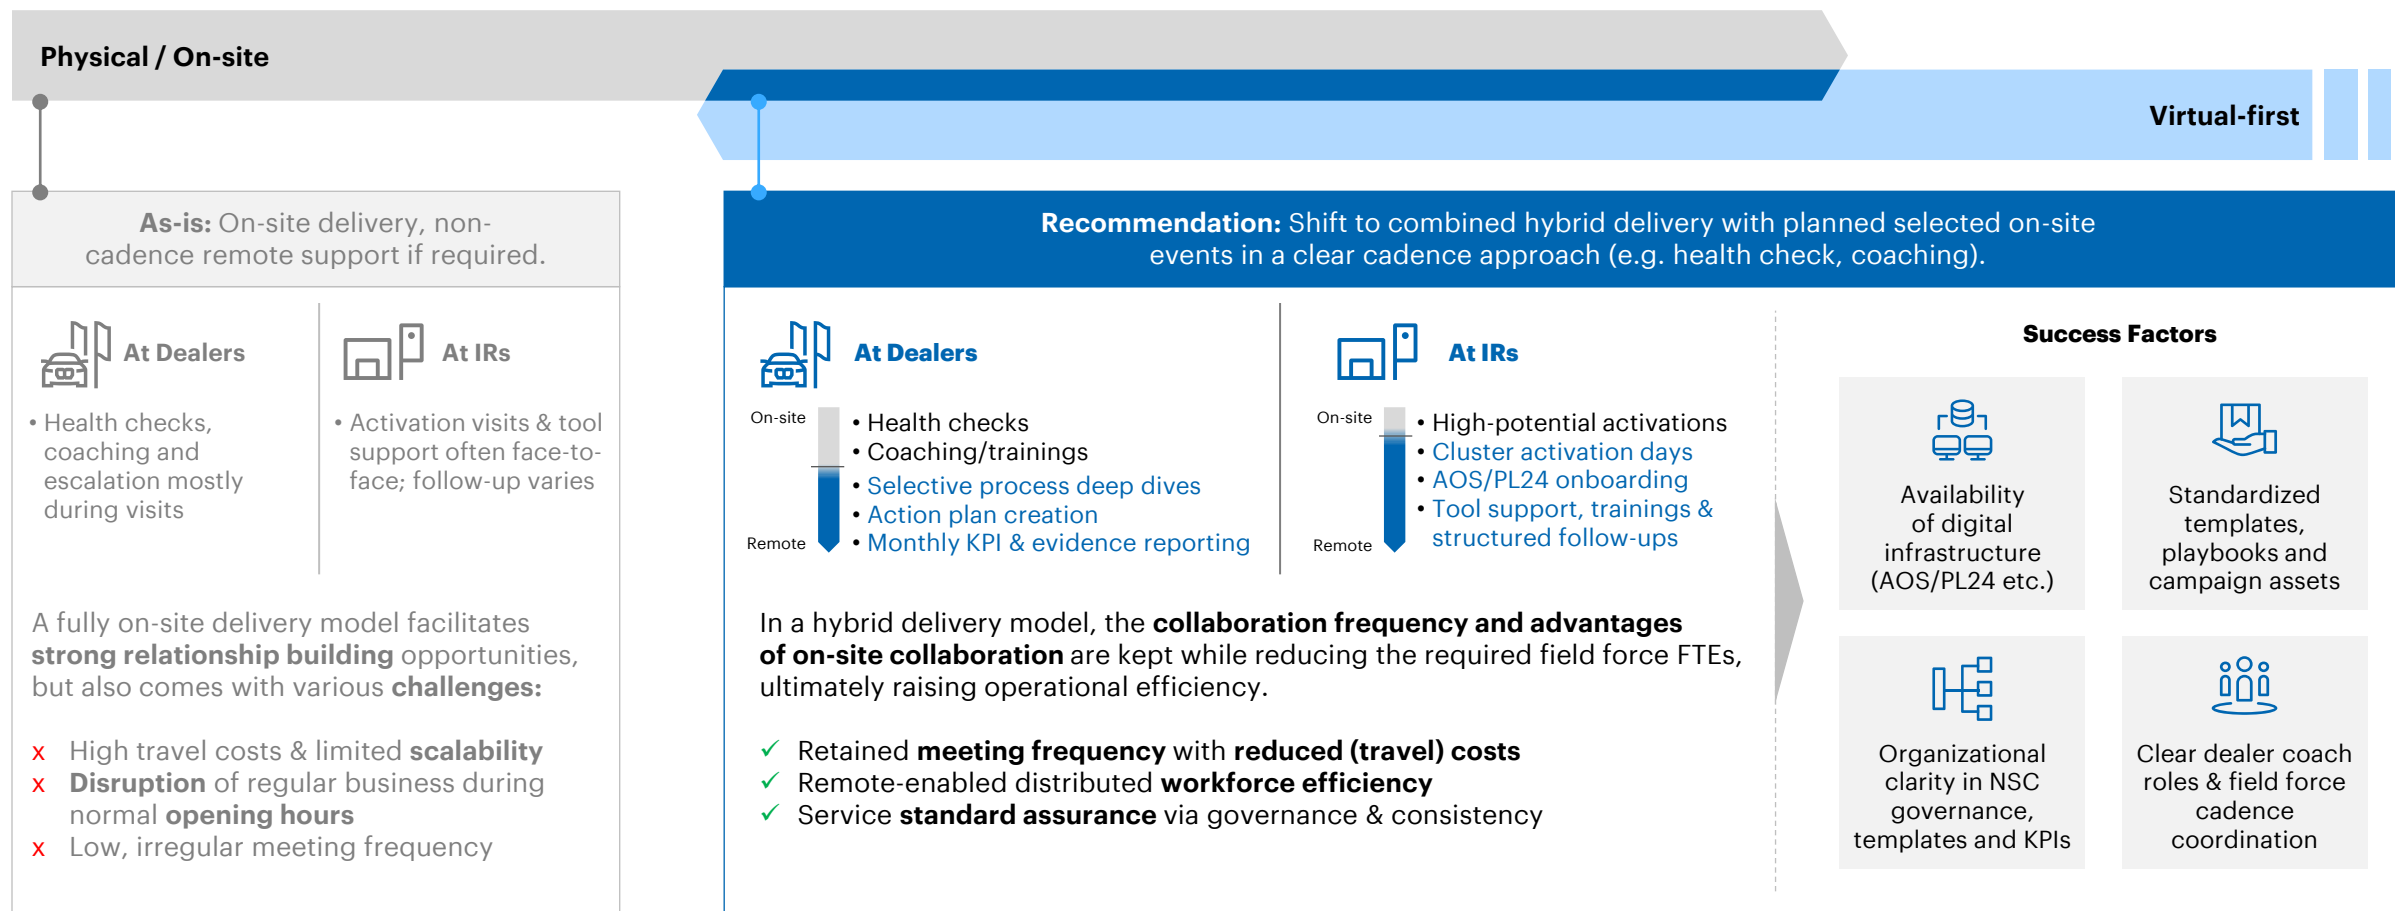

Shifting from the current on-site delivery model to a selected hybrid approach retains the people-first approach & lifts efficiencies

C: Scaling IAM execution and lowering cost-to-serve without compromising impact

Exemplary

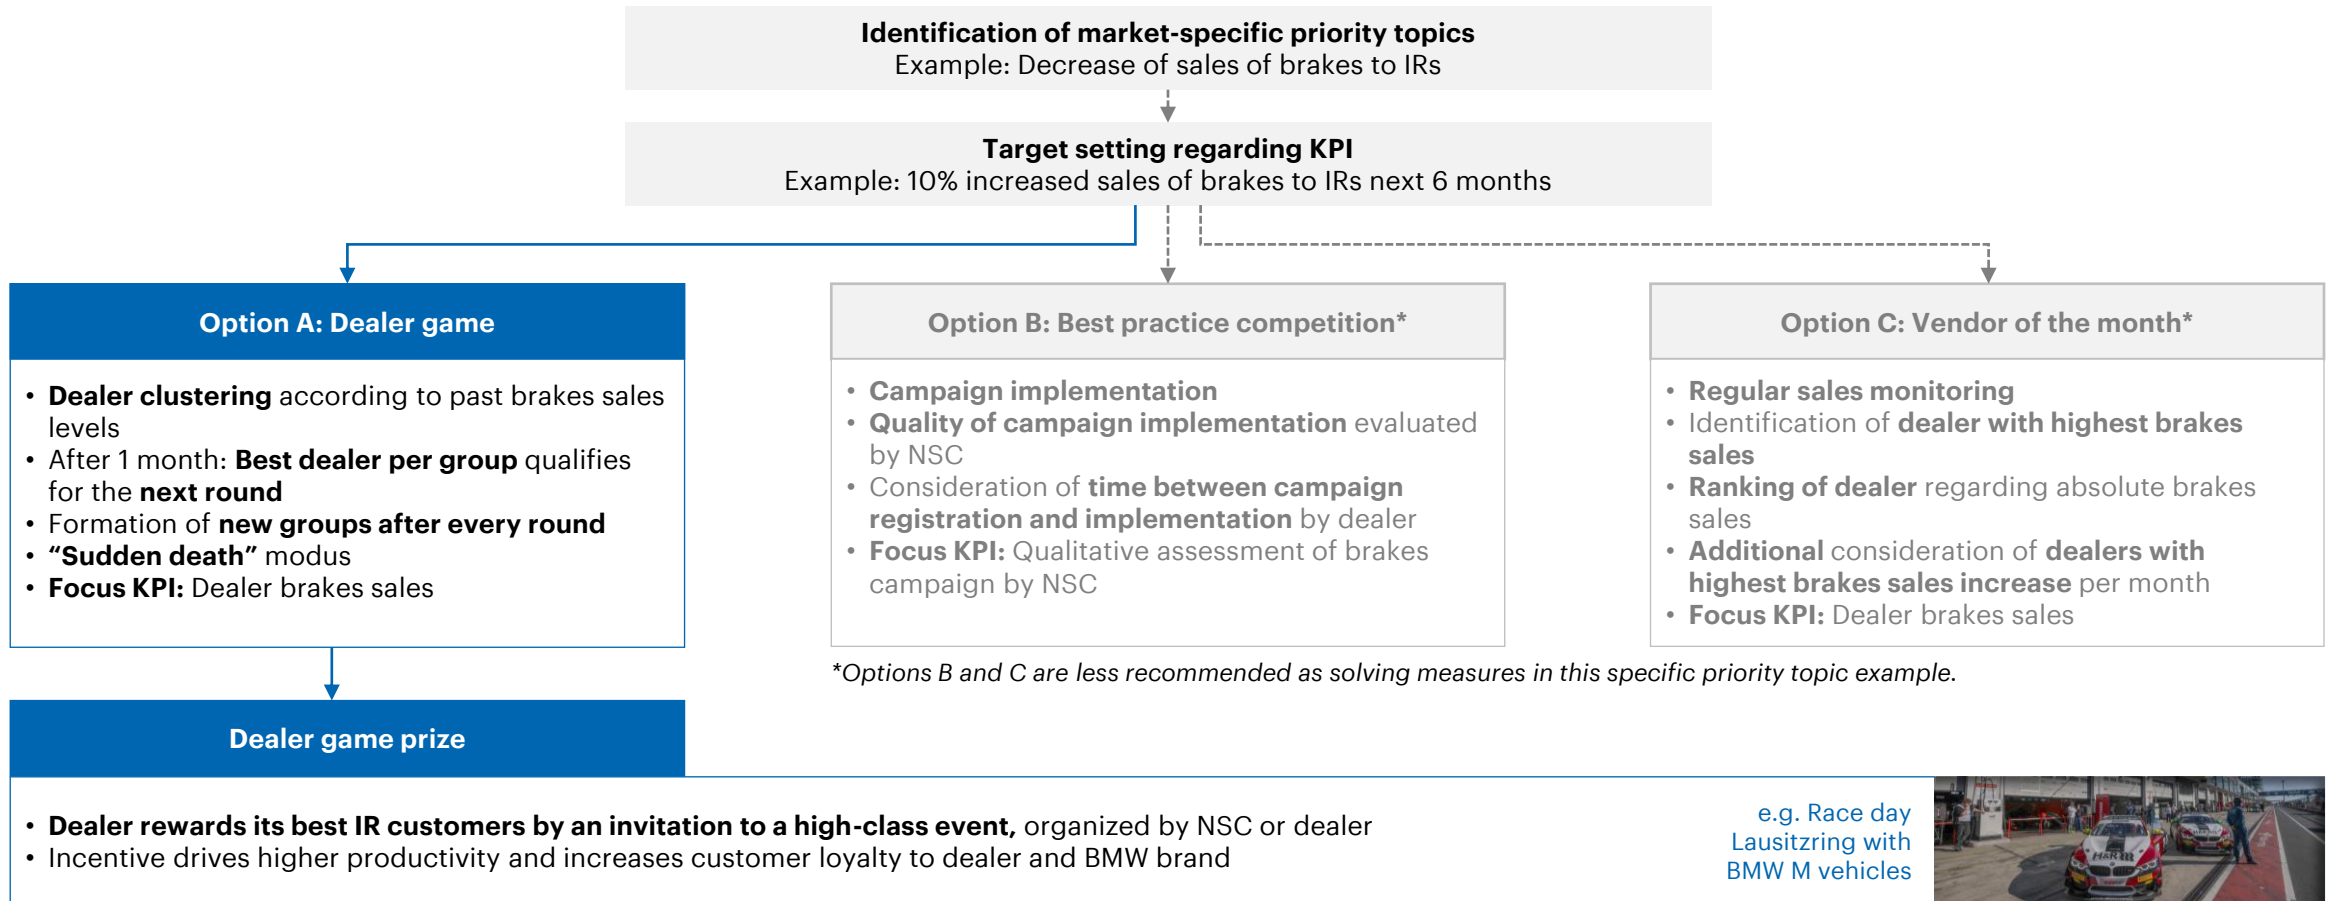

There are several different possibilities to incentivize dealers to increase their original parts sale with marketing campaigns

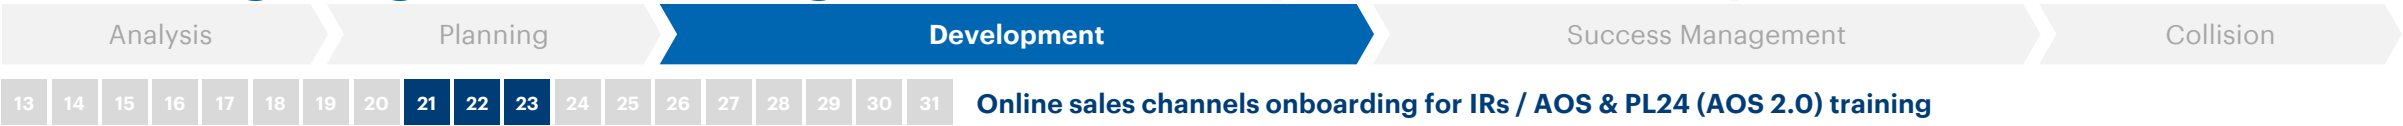

D: Incentives increase customer loyalty

Exemplary

Unlocking scalable aftersales growth through AOS 2.0 & PL24 training, enabling targeted learning and market-specific delivery at dealers and IRs

D: Market-specific AOS & PL24 enablement training of dealers and IRs to professionalize the use of the ordering system

Exemplary

	Markets Strategic enablement	Dealers Co-creation and enablement	IRs Full-service training delivery
What it is about	Foundation & readiness	Capability build-up	Adoption & usage
How we deliver	- Define training landscape and conduct market-specific training needs analysis (AOS 2.0, PL24, KeyReader) - Align training strategy with market maturity, incl. decision on market-individual vs. regional concepts - Ensure AOS 2.0 & PL24 account setup for IRs, incl. starter guides and first order readiness as foundation for rollout	- Market-specific training materials (playbooks, checklists) based on Accenture experience and BMW expert input - Train-the-trainer model for dealers and field force, incl. coaching and piloting of AOS 2.0, PL24 and KeyReader - Enable dealers as multipliers to drive IR adoption, strengthen dealer-IR-BMW collaboration through shared tools	- Hands-on, end-to-end training incl. parts platforms, aftersales info, ordering workflows, campaigns, and ISTA - Modular training formats (on-site, virtual, hybrid) supported by digital learning content and usage-based reporting - Market-wide trainings via certified trainers, centrally governed through training locations and trade-fair activation

21.5% order share through PL24 (~50% top performer)

Digital parts ordering is proven in a mature market and ready to scale

~3min saved with PL24 per order – efficiency impact

Digital ordering reduces BMW dealer cost-to-serve and efforts

operational usage translate into revenue growth

IR- and dealer-specific training as lever to drive adoption and sales uplift

- Limited local capacity to develop marketing and product materials alongside operational priorities
- Expertise gaps in CI-compliant content creation and product messaging
- Time-intensive, non-standardized material leading to inconsistent quality

- **Faster marketing execution** by enabling dealers to quickly create and distribute campaigns without building materials from scratch.
- **Consistent BMW branding** through centrally approved templates that ensure a uniform and professional appearance.
- **Lower effort and cost** by replacing multiple local tools with one centrally governed platform.

[illegible]

- ✓ **Higher revenue focus** by prioritizing the parts that have the highest potential
- ✓ **Better availability and conversion** through focus on high-potential parts
- ✓ **Automatic population of product details** for swift creation of localized materials

2. DAS SOLLTEN SIE WISSEN: ORIGINAL BMW BATTERIEN MIT CALCIUM-TECHNOLOGIE.

Wache Kraft bei jedem Startmoment.

Original BMW Batterien mit Calcium-Technologie sind optimiert auf die Kapazität und den Bedarf von BMW Modellen mit Effizienz-Competition Funktionen abgestimmt und daher für BMW Fahrzeuge die beste Wahl.

Leistung und Sicherheit, Vielseitigkeit und Nachhaltigkeit.

Die hervorragende Qualität der Original BMW Batterien mit Calcium-Technologie garantiert Ihren Kunden nicht nur eine hohe Leistungsfähigkeit, sondern auch Sicherheit, Vielseitigkeit und Nachhaltigkeit.

Die Vorteile im Einzelnen:

- geringe Selbstentladung, auch bei geringen Temperaturen
- lange Lebensdauer und wartungsfreies Verhalten
- lange Lebensdauer und höherer elektrischer Konsum durch höhere Energieverfügbarkeit
- Schutz vor extremen Ladezuständen durch automatische Ladezustandskontrolle
- Stabilität bei hohen und niedrigen Temperaturen
- optimale Sicherheit gegenüber Schwefelgasen
- Vermeidung von Verschleiß durch Vermeidung überhöhter Erdoberflächen in der Batterie
- sehr gute Recycling-Eigenschaften

A localization of centralized parts baskets amplifies the ability of markets to reclaim IAM aftersales potential through highly competitive parts

D: Central parts basket calibration to local, market-specific needs

Merchandising concepts designed and approved by BMW to consistently recognize dealer excellence at scale across markets

D: Merchandising products for BMW-approved distribution in the markets enabling scalable, governed dealer recognition

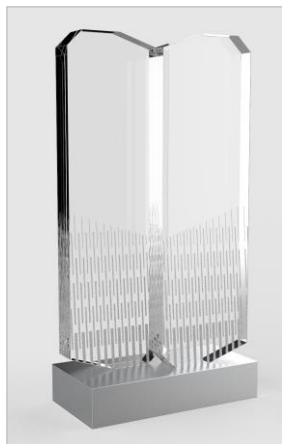

Tangible brand
excellence

BMW merchandising products are premium, CI-compliant physical awards and artifacts that translate BMW brand values and achievements into tangible experiences, developed under central BMW governance and approved at NSC level in agreed timelines.

- **Strengthen brand perception** by consistently reflecting BMW design, quality, and craftsmanship across all markets
- **Increase dealer and importer motivation** through visible, prestigious recognition of performance and milestones
- **Enable scalable rollout across markets** with clear processes, governance, and timely management approvals

Example 01: BMW Kidney Grille Trophy

Manufactured as a three-dimensional replica of the BMW kidney grille, produced in premium materials and inspired by current BMW vehicle design.

- ✓ **Acts as a high-impact centerpiece** for showroom openings and official events
- ✓ **Supports external communication** demonstrating BMW-endorsed excellence
- ✓ **Enhances dealer visibility** in the BMW network through recognizable awards

Example 02: BMW design football

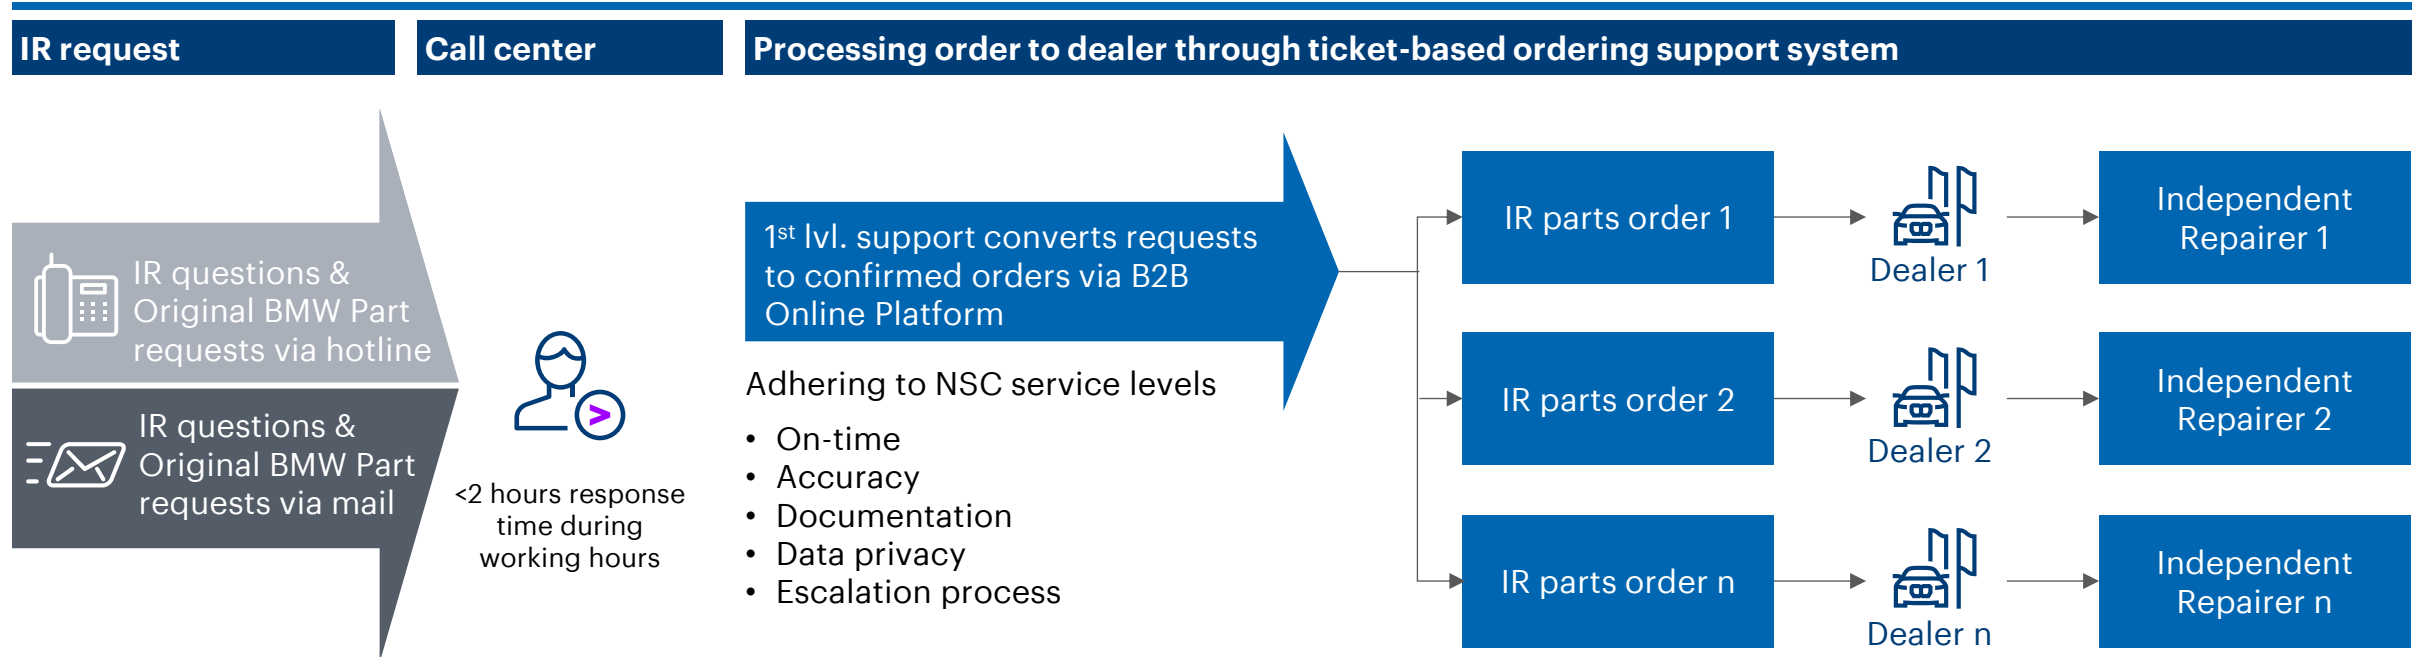

Featuring BMW CI-compliant design elements, high-quality leather panels, precision-printed BMW roundel, and customizable event or campaign branding.

- ✓ **Creates active, visible brand engagement** at events or community activations
- ✓ **Emotional connection to BMW** through interactive, team-based experiences
- ✓ **Enables campaign-specific personalization** with consistent BMW design

Ticket-based first-level support enables IRs to order BMW genuine parts efficiently

Accenture-led call center manages parts ordering requests from IRs for BMW original parts dealers

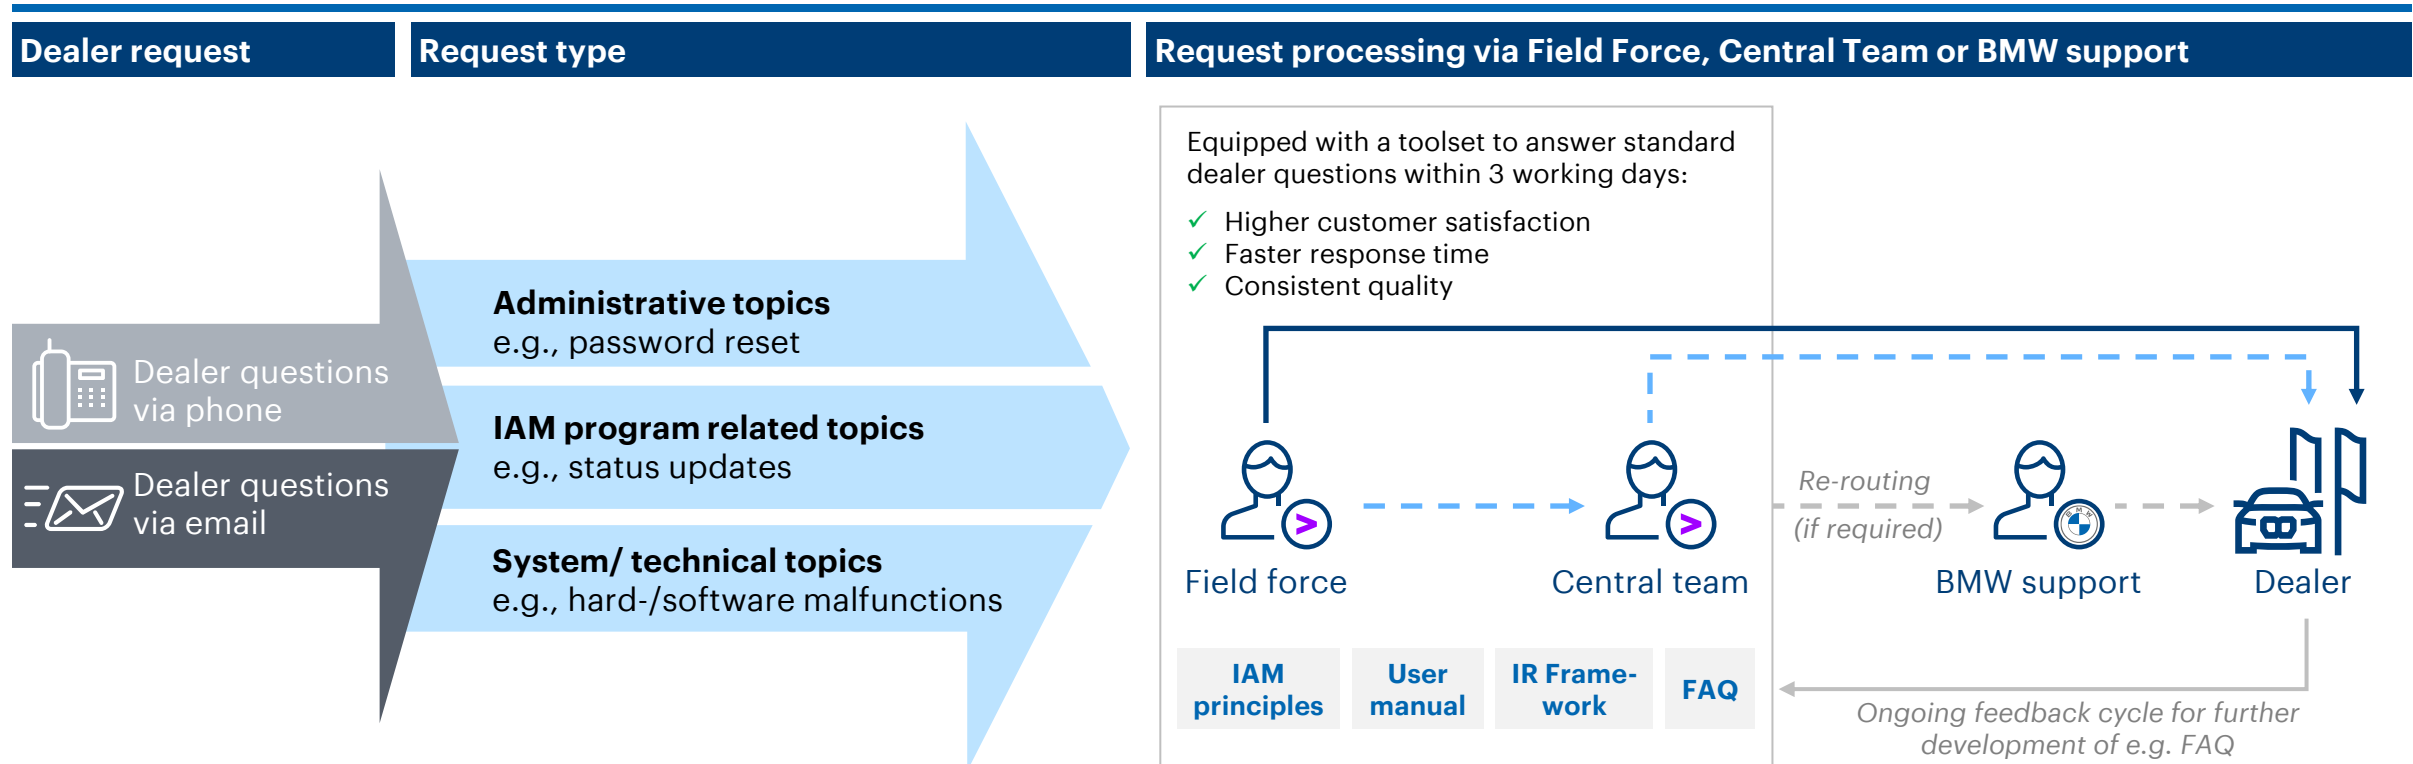

B2B online platform for IAM covering the full inquiry-to-resolution process

- Automated monthly reporting on ticket volume, response time, resolution rates, customer satisfaction scores, summary of recurring issues
- Defined processes and scripts to handle ordering efficiently
- Escalation to NSC for complex cases, e.g., dealer is not nearby, requested parts are not available at a single dealer, individual dealer pricing
- Integrated feedback loops

Transforming IAM dealer support through a toolset to improve efficiency and productivity

A dedicated field force acts as the first-level support interface for authorized BMW dealers efficiently with a toolset

Most initial inquiries are efficiently handled by the field force or central team using prepared toolsets, while only a small share of complex requests is routed to BMW support, resulting in optimized operations. Monthly reporting can be assisted by utilizing Microsoft Copilot.

3.4

Joint approach

Success management

We are the right partner to unlock the next level of operational efficiency

Analysis

Planning

Development

Success Management

Collision

Overarching approach

Illustrative

We build on the existing process and strengthen it with local market knowledge and central expertise to drive efficiency

Improved data quality KPIs

Higher reporting reliability

Better comparability & clarity

Increase data completeness

Faster reporting cycles

Increased transparency

Accenture value-add

Proven delivery methodology applying a structured, well tested reporting approach to ensure clarity, consistency, and repeatability across markets

Deep system and process expertise combining hands-on BMW system knowledge with centralized CDH best practices to elevate the existing setup and build a scalable foundation for future enhancements

Transparent and controlled reporting flow embedding simple yet powerful Excel-based controls (e.g., alerts, quality checks) to ensure full visibility, reliability and data integrity along the process

32-37

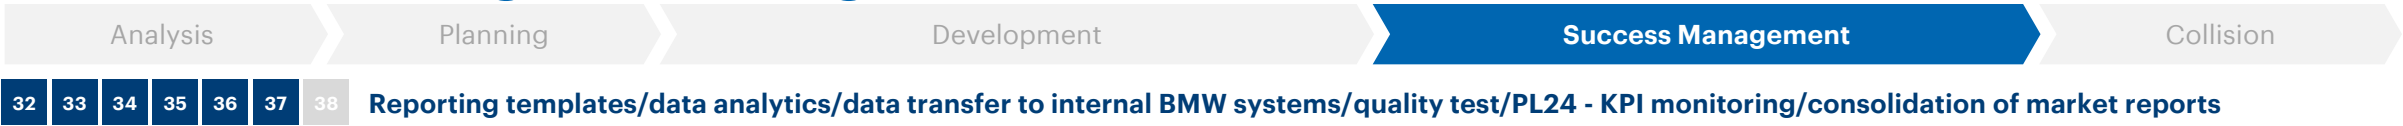

Reporting
chain

38

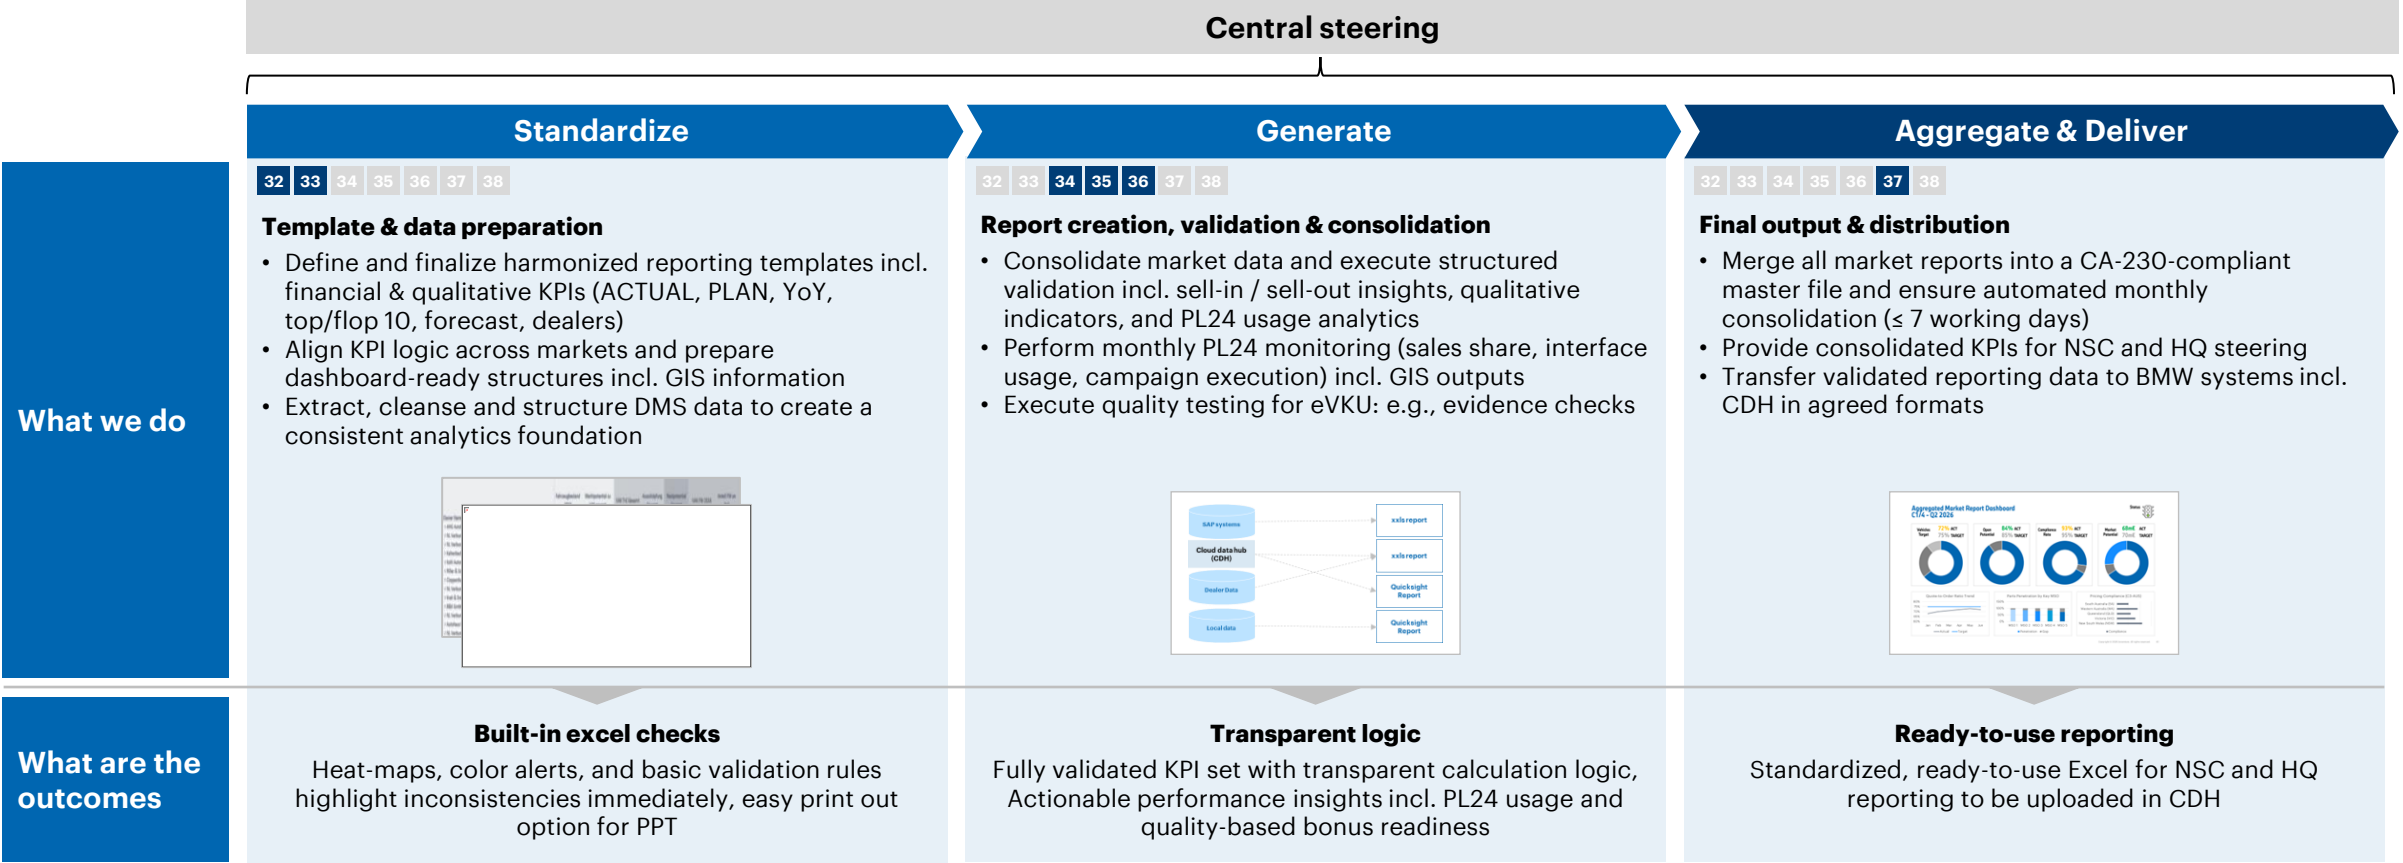

Central
steering

A standardized reporting chain drives data transparency and reliable decision-making across regions and markets

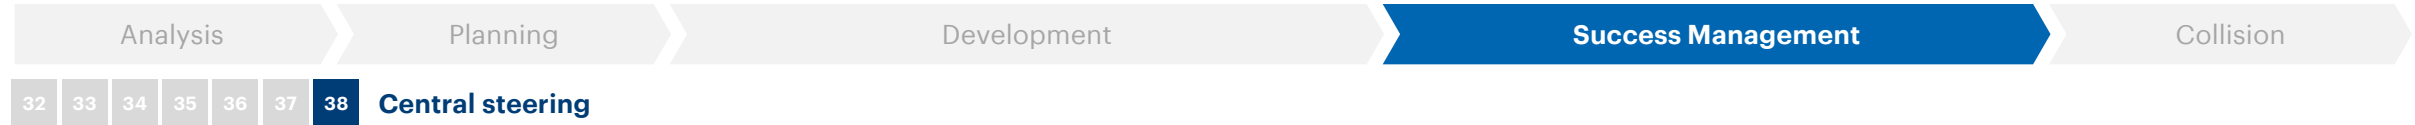

End-to-end reporting - From standardized data to harmonized data delivery

Illustrative

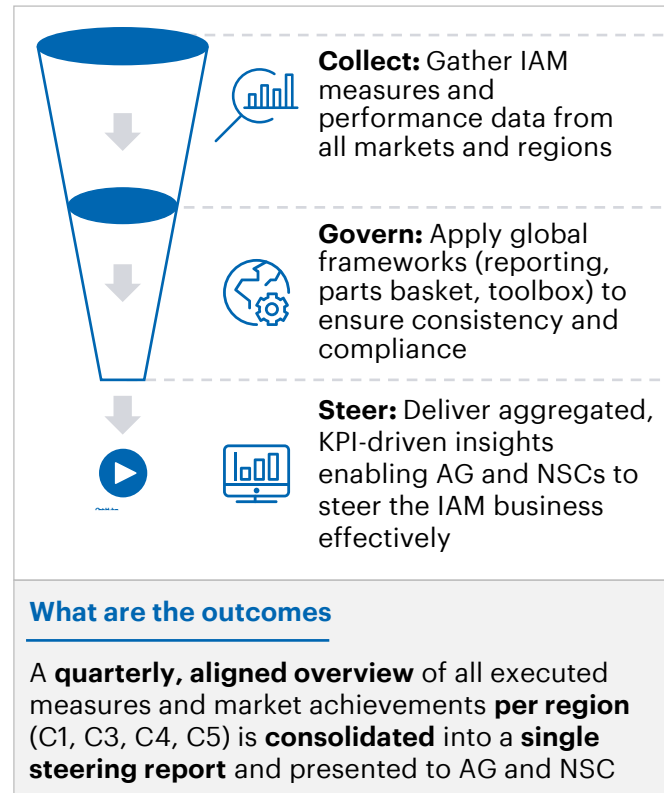

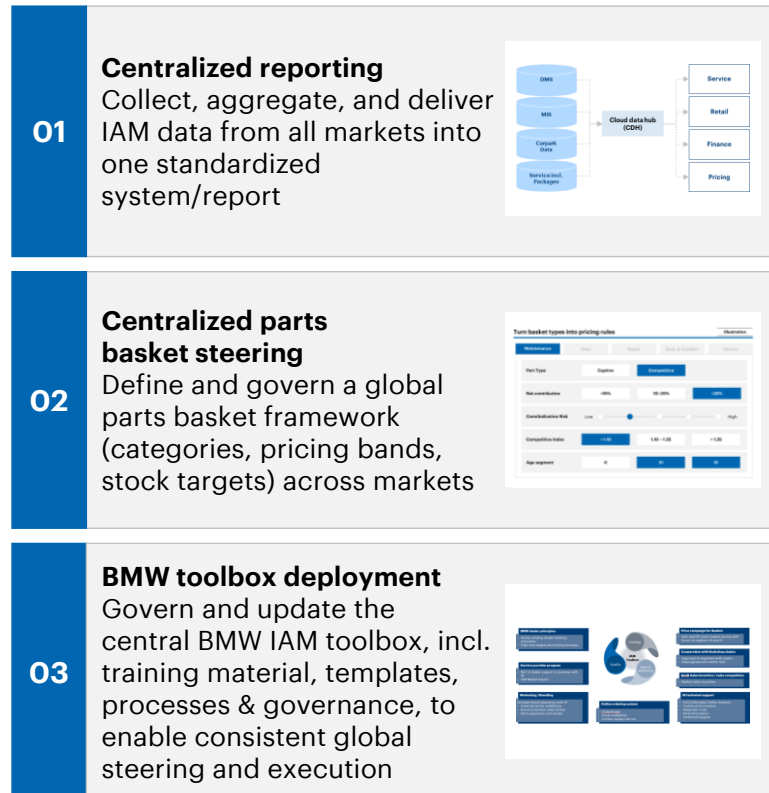

We enable smooth program success through centralized IAM steering

From global inputs to market-ready steering outputs at HQ level

Illustrative

Accenture value-add

- Day-1-readiness**
We ensure IAM success management is continuing to be fully operational from day one with clear roles and no business disruption
- Governance & quality**
We apply structured governance, validation controls, and KPI monitoring to ensure reporting accuracy and on-time delivery
- Integrated insights**
We align all central stakeholders through clear reporting, shared dashboards, and transparent collaboration
- Adaptive support**
We scale success management activities up or down based on evolving central needs and market inputs
- Market collaboration**
We work closely with markets, leveraging our local market insights from business and technical perspective to ensure reporting standardization

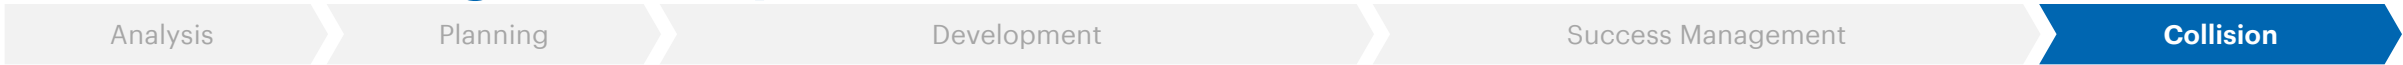

3.5

Joint approach

Collision

We work with a strongly data-driven approach to build an integrated collision management system in Australia

Overarching approach

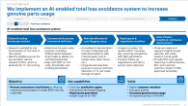

Collision estimate data	Parts sales conquest	Proactive total loss avoidance	National account compliance	Program analysis	Bodyshop & Paint program
- Identify all relevant estimating platforms, assess market share, and confirm API integration pathways - Create a standardized onboarding workflow for IRs to register and authorize automated data sharing - Implement ingestion pipelines, cleansing rules, and secure storage with consistent output formats for NSC	- Compile competitive part numbers, pricing intelligence, and cross-reference logic - Automatically detect competitive parts within incoming estimates and trigger conquest workflows - Provide targeted offers, follow-up with IRs, negotiate where needed, and record lost-sales reasons	- Align with NSC on thresholds (repair cost %, model value, labor hours) and implement automated flagging - Ensure 1-day turnaround for TL-avoidance quotes within NSC parameters - Engage IRs, negotiate where needed, and document outcomes and insights for NSC	- Map key MSOs, evaluate current genuine parts share, and identify leakage - Align NSC, dealers, and MSOs on pricing levels and commercial terms - Track quote-to-order ratios, adherence to pricing, and lost-sales reasons	- Build dashboards covering sales, lost sales, TL avoidance, MSO compliance, rebates, and ROI - Ensure consistent definitions, KPIs, and reporting formats across markets - Conduct periodic program reviews with actionable insights and improvement recommendations	- Evaluate current bodyshop performance, standards compliance, and capability gaps - Deliver training programs, conduct Global Standards audits, and manage accreditation cycles - Support new bodyshops, monitor performance, and implement improvement plans

Illustrative

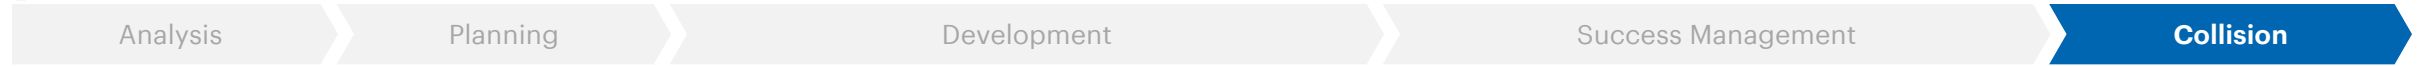

Accenture value-add

-  Strongly data-driven approach unlocking lost parts sales and enabling targeted conquest strategies
-  Integration across all collision touchpoints to maximize parts adoption and drive incremental sales through proactive avoidance insights
-  Configuration in local manner with global scalability to deliver tailored market impact while ensuring consistent growth and pricing discipline
-  Building on automation and analytics with transparent monitoring to strengthen MSO loyalty and enforce BMW pricing agreements

Detailed insights on the following slides

E2E collision estimate analytics and competitive parts conquest framework

Illustrative

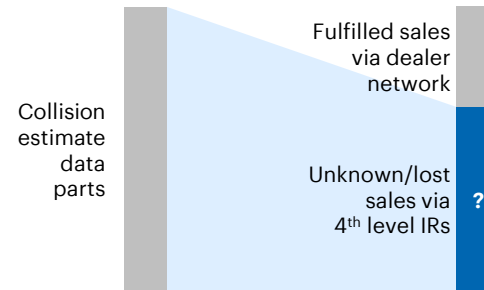

01 Estimate acquisition & data parsing

Collision estimate data received from registered 4th level IRs via integrated data sources/API.

02 Collision parts identification

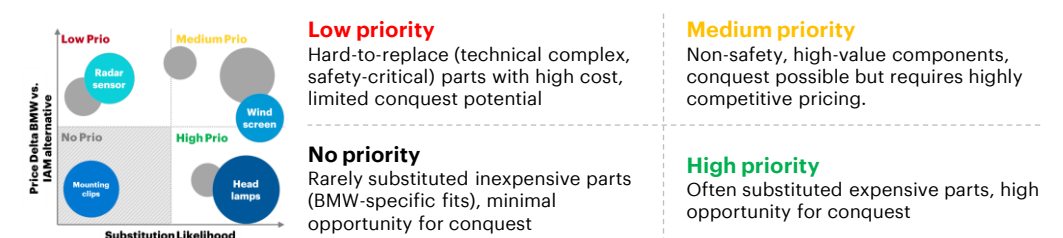

Delta of received collision estimate data and known sales to determine opportunity parts line items.

03 Contestability classification

Opportunity parts are allocated within 2x2 matrix based on substitution likelihood and price delta to prioritize strategic sales conquests of high conversion potential parts via BMW funds.

Allocation of parts via 2x2 prioritization matrix

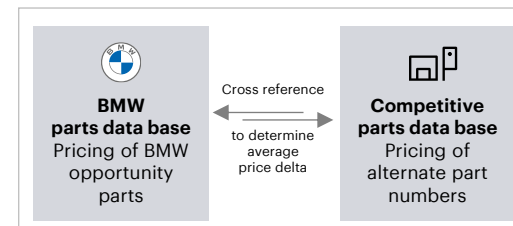

04 Competitive intelligence matching

Identified parts are evaluated based on substitution likelihood (technical complexity, safety criticality, aftermarket availability etc.) and cross referenced to detect known alternative part numbers and market pricing benchmarks.

Classification of lost sales opportunities

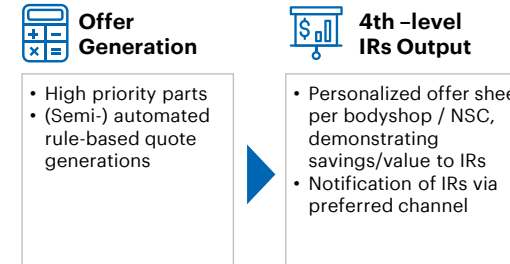

Part	Substitution Likelihood	Rationale
Bumper cover	High	Easily replicated, price sensitive
Headlamp	Medium	Some alternatives exist
Radar sensor	Low	Calibration/liability constraints
Hood	Medium-High	Often available aftermarket
Windscreen	Medium	IAM supply exists

Quantification of price delta

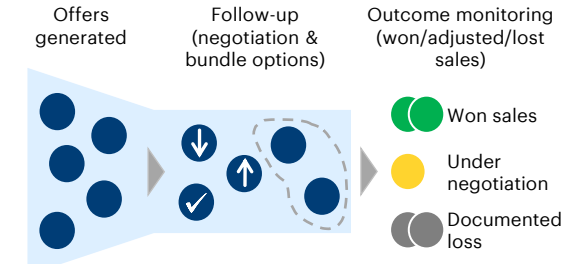

05 Targeted offer generation

High opportunity parts are matched against competitive market intelligence to negate NSC-approved targeted offers.

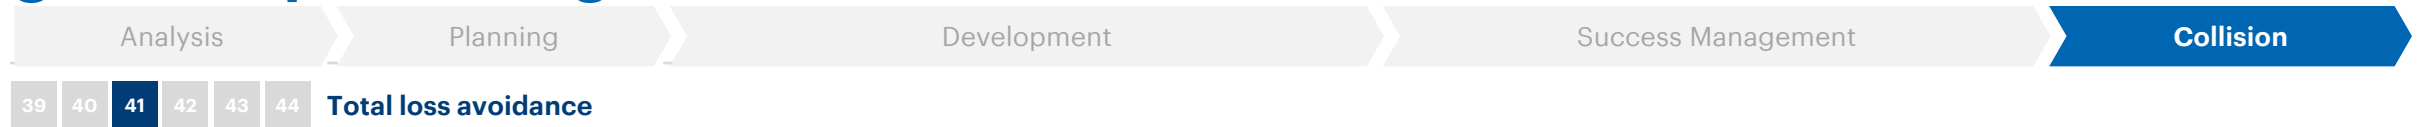

06 Negotiation & tracking

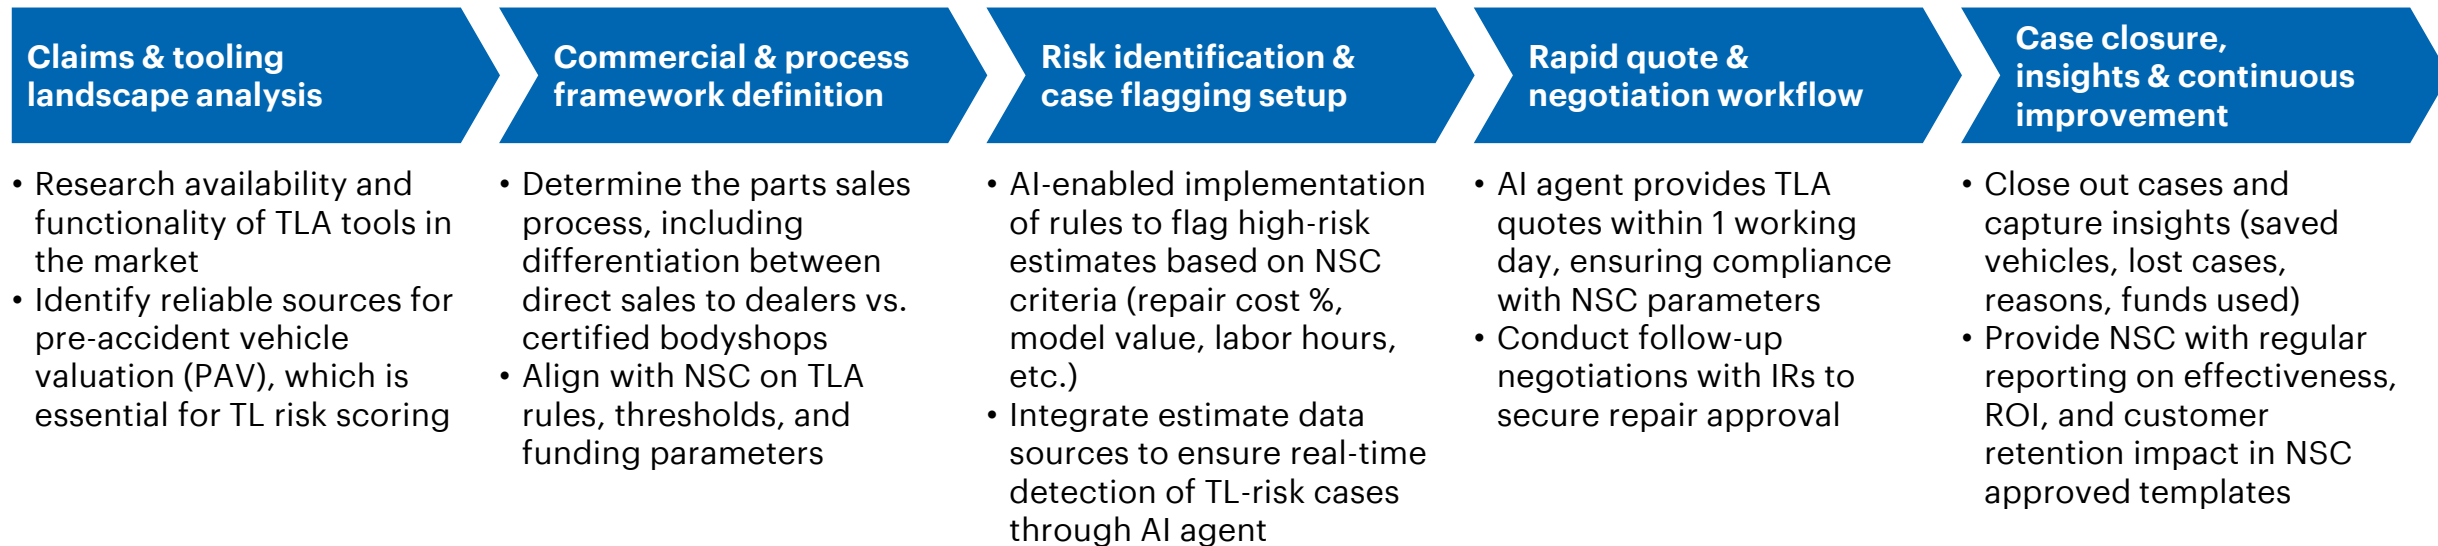

High opportunity parts are matched against competitive market intelligence to negate targeted offers.

We implement an AI-enabled total loss avoidance system to increase genuine parts usage

AI-enabled total loss avoidance system

Objective

- **Prevent unnecessary total losses** by offering targeted pricing support to keep BMW vehicles repairable

Key capabilities

- Total loss **prediction engine**
- Automated rule-based flagging
- **Rapid quote generation**
- Insight capture for NSC

Value

- Higher **customer retention**
- Less grey market
- **Increased genuine parts usage**
- Increased business in DO/IAM

Strengthening MSO* loyalty and genuine BMW parts adoption through transparent, consistent national account compliance

44

National account compliance

From market identification to compliance monitoring and continuous improvement

Challenges

- MSOs increasingly drive collision repair volume
- Inconsistent pricing across dealers weakens BMW's competitiveness
- Transparency gaps cause sales leakage to independent suppliers.

Objective

A structured compliance program (pricing agreements) supports dealer performances, stabilizes parts demand and builds loyalty.

- Unified national pricing agreements between NSC, dealers, and MSOs
- Transparent monitoring of MSO adherence to BMW terms
- Increased genuine BMW parts share across MSO networks
- Clear visibility into quote-to-order ratios and lost-sales reasons

1. MSO identification & baseline assessment

- Identify **key MSOs** based on repair volume, geographic reach & strategic relevance
- **Map relationships** across NSC, dealers, and MSOs
- Establish **current loyalty level** to genuine BMW parts and identify **leakage patterns** and **commercial gaps**

2. Pricing agreement design & implementation

Competitive pricing alignment

Value proposition enhancement

- **Structured pricing frameworks** (pricing levels and commercial terms) aligned **with NSC parameters** to support national account agreements with MSOs
- **Standardized discount structures**, supported by **compliance monitoring** ensure transparency across stakeholders and enable consistent terms agreement

BMW brand advantage

- Genuine BMW parts purchase provides **OEM-specific benefits**
 - Tech support hotlines (remote repair know-how)
 - Aftersales system compatibility assurance

Hidden costs avoidance

- Minimize rework and reordering
 - Insufficient alternate parts data cause **incorrect parts ordering**
 - Failure potential of alternate parts cause **non-recoverable labor and operational losses**

3. Compliance monitoring & performance management

- Track adherence to agreed pricing structures across MSOs & dealers
- Monitor commercial effectiveness (quote-to-order conversion and parts penetration levels)
- Analyze lost sales drivers to identify leakage & improvement opportunities
- Provide transparent, timely reporting to NSC and dealers to enable proactive steering

Monitoring dashboard (exemplary)

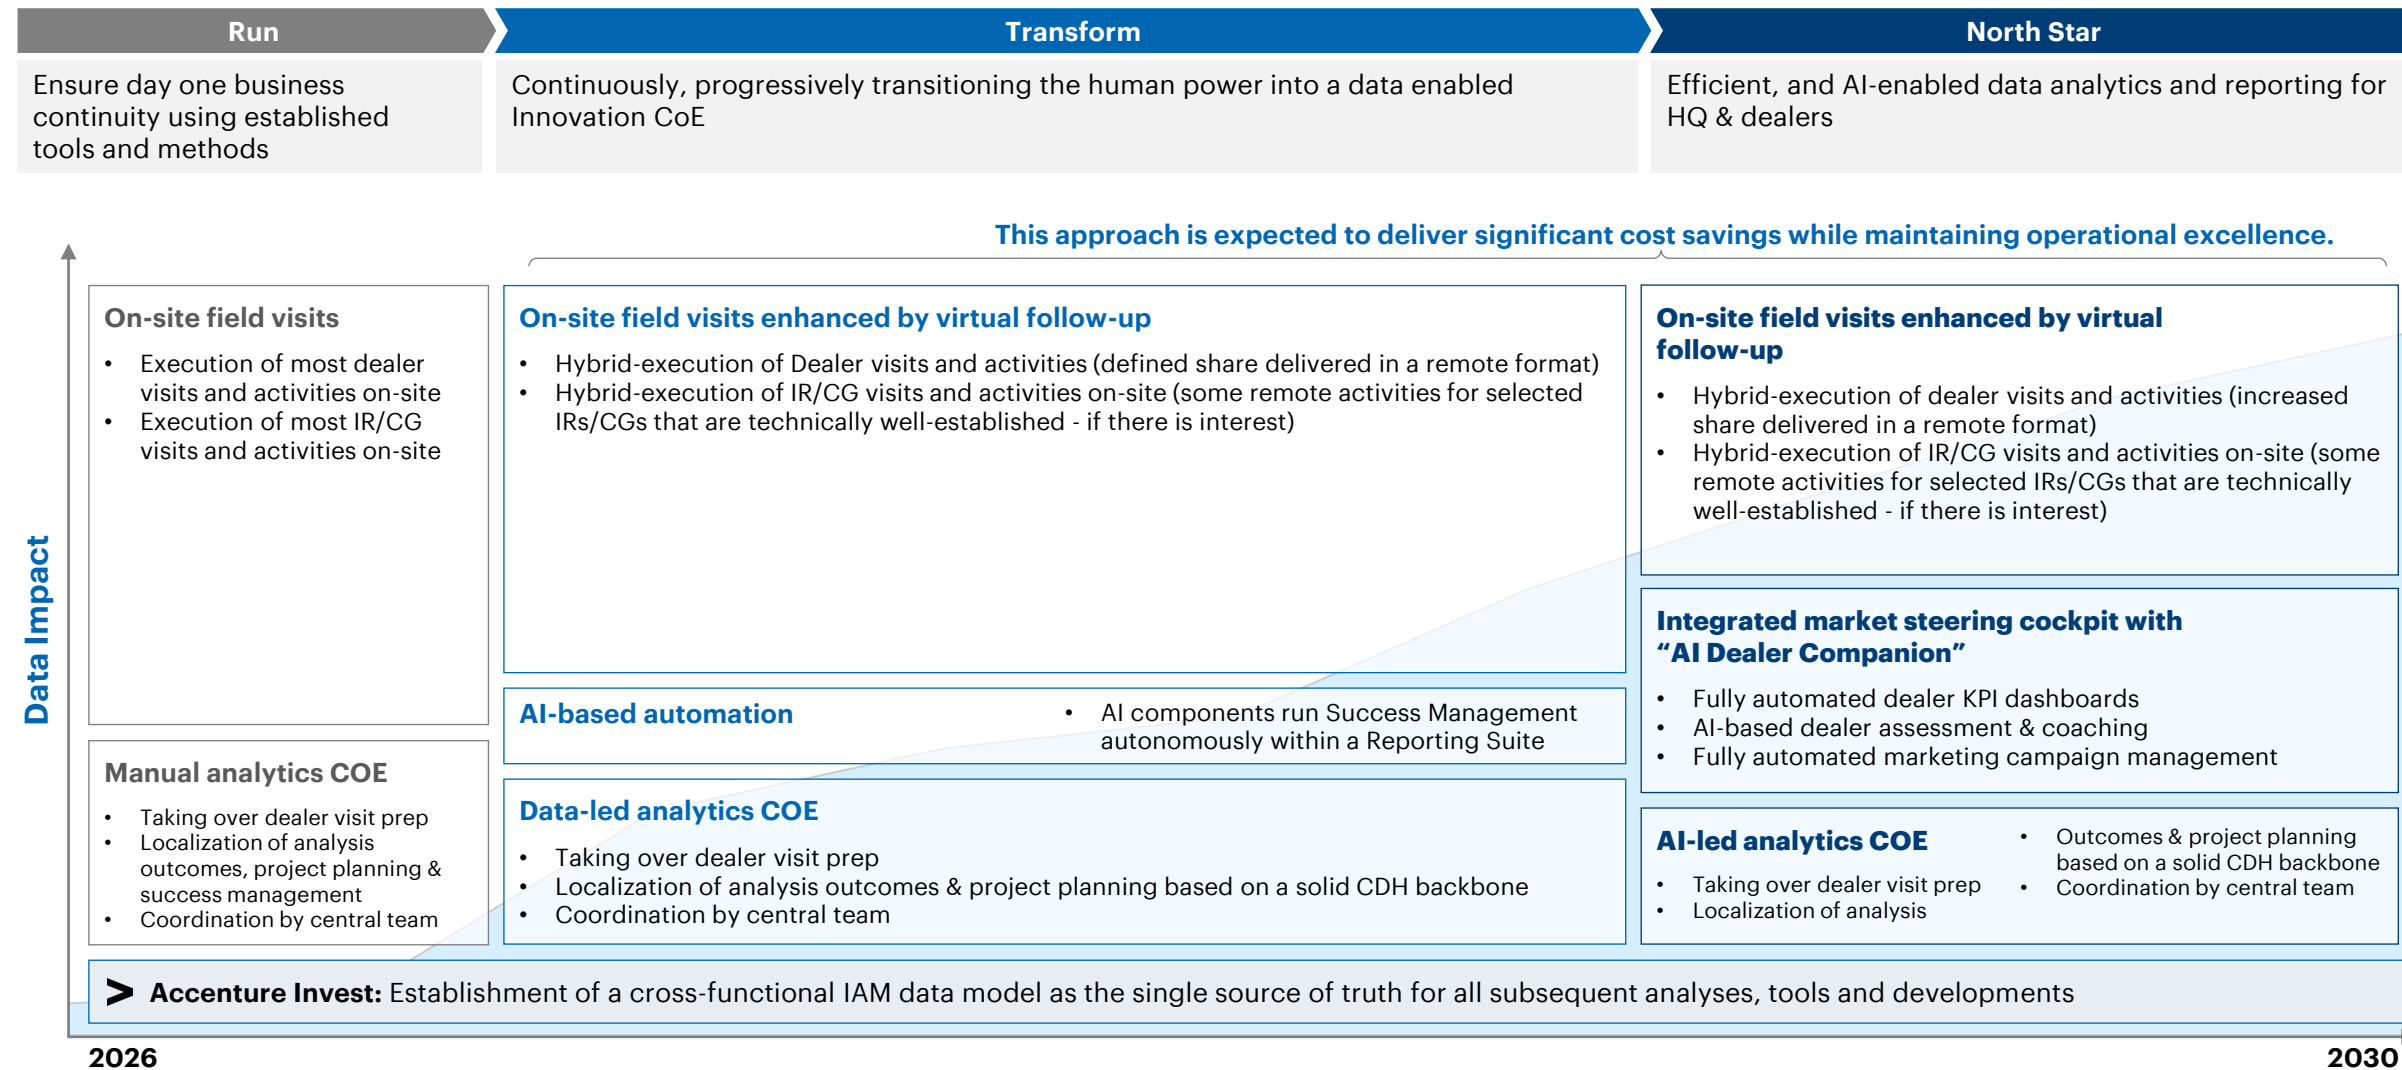

04

Continuous program improvement*

Building a future-proof IAM: A data-driven automation journey to maximize value and efficiency in 4th level business

...by building up on existing foundations to rapidly identify quick wins through heatmap-driven insights ...

Quick wins (exemplary)

1. Regions C1

Selected due to strong data availability, existing team expertise, and proven blueprints from comparable markets; enabling fast, low-risk implementation.

2. Analysis area

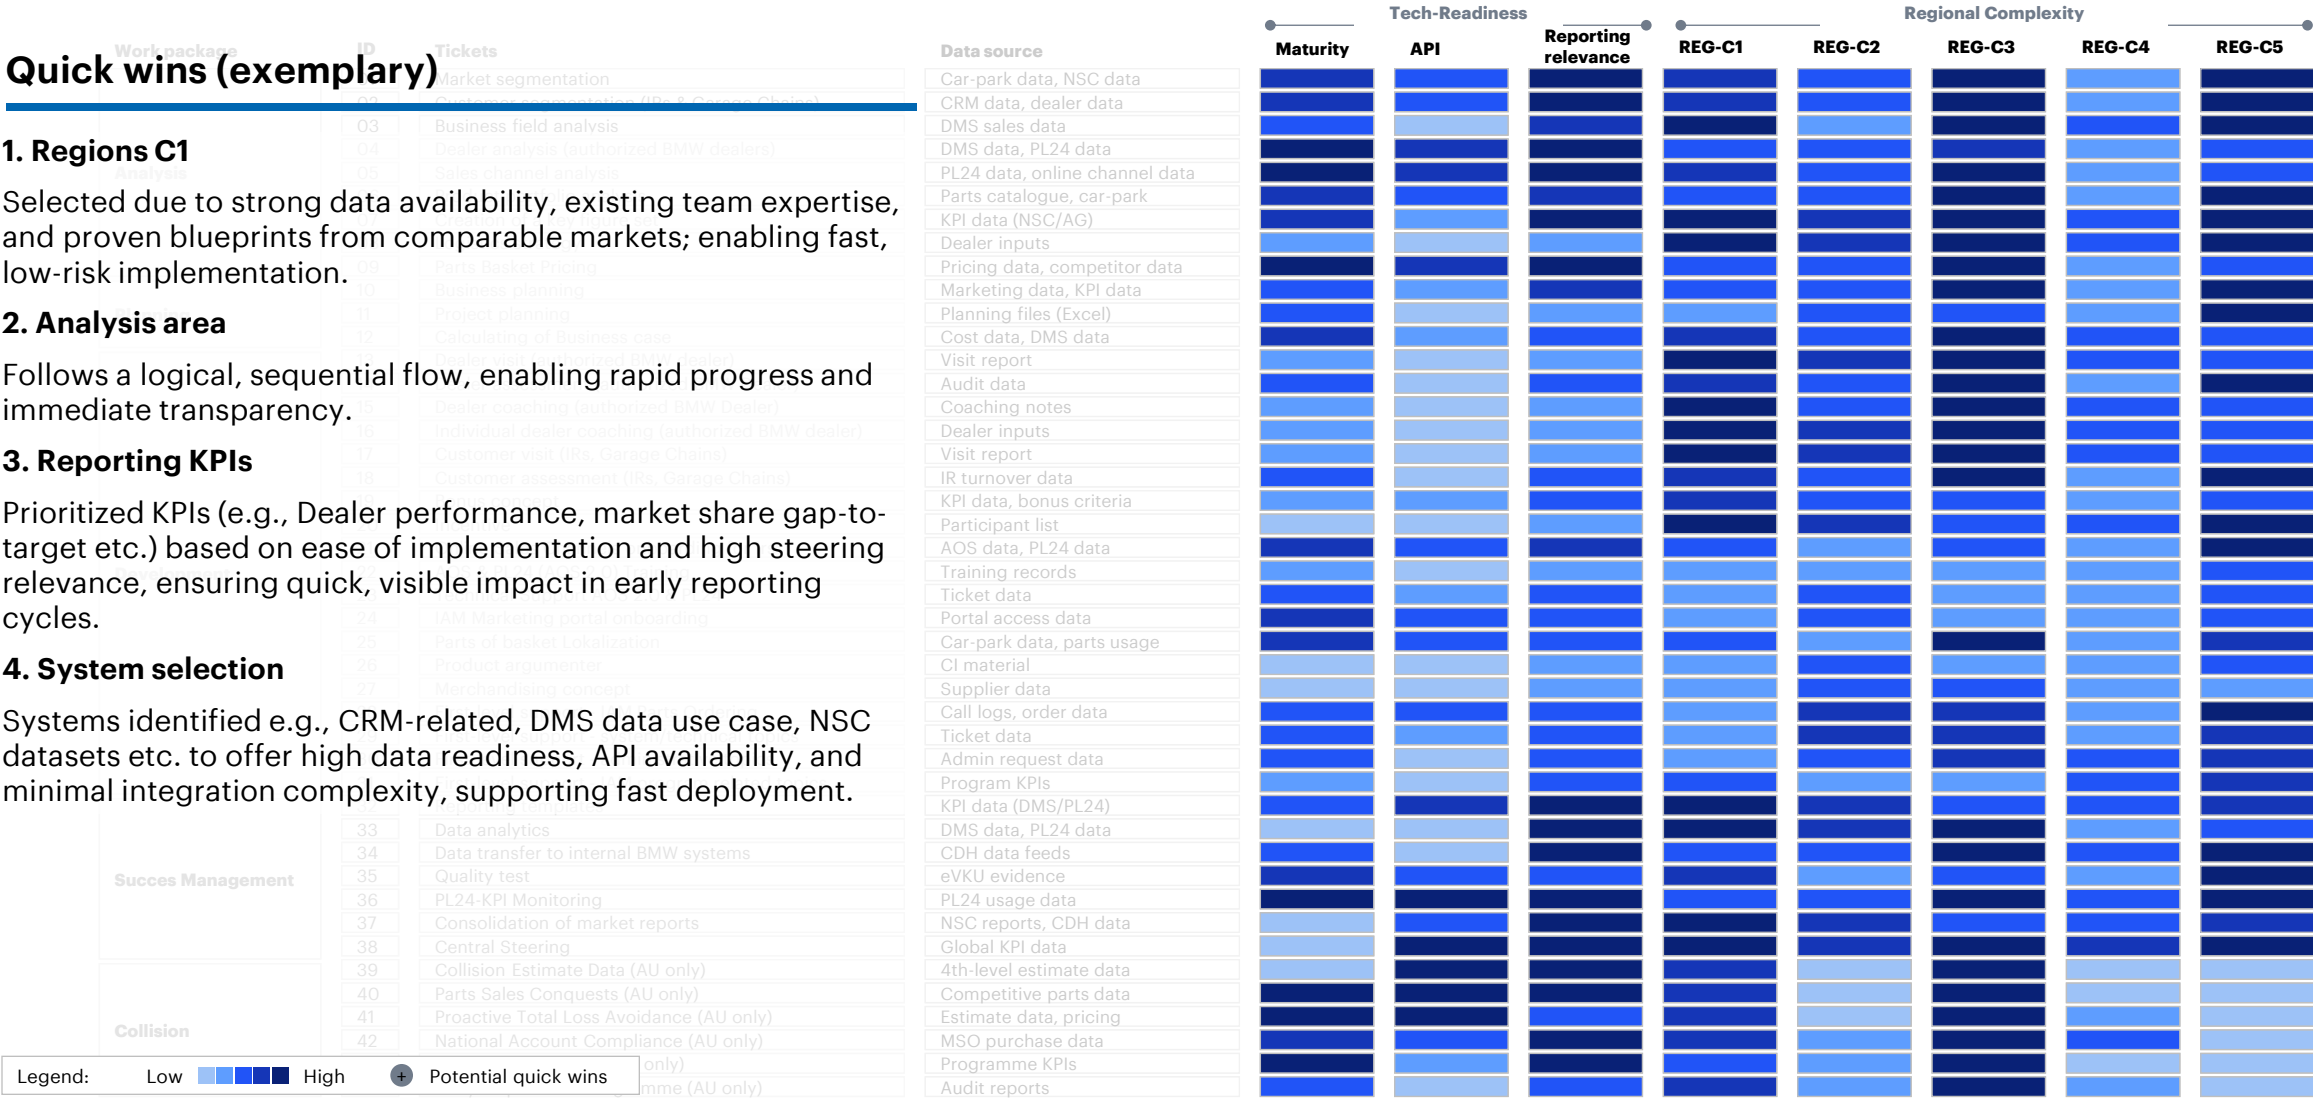

Follows a logical, sequential flow, enabling rapid progress and immediate transparency.

3. Reporting KPIs

Prioritized KPIs (e.g., Dealer performance, market share gap-to-target etc.) based on ease of implementation and high steering relevance, ensuring quick, visible impact in early reporting cycles.

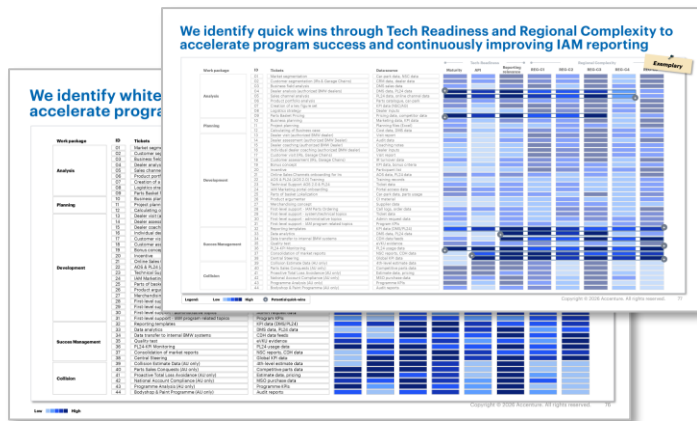

4. System selection

Systems identified e.g., CRM-related, DMS data use case, NSC datasets etc. to offer high data readiness, API availability, and minimal integration complexity, supporting fast deployment.

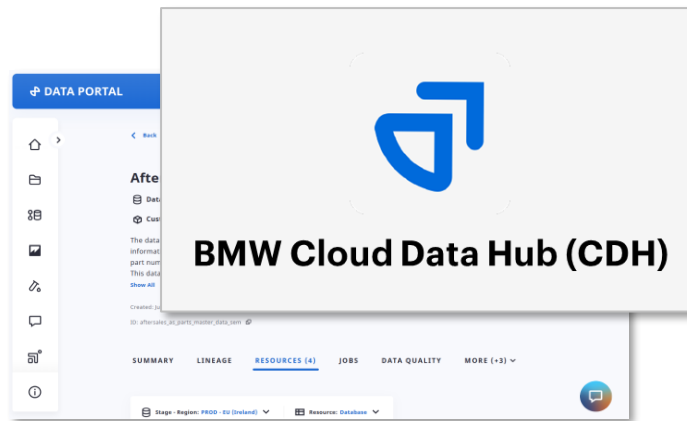

... and, by linking these insights with the CDH, to move from insight to impact at scale

Priority levers for rapid activation

We prioritize early-impact opportunities by overlaying **Tech-Readiness** with **Regional Complexity** to identify the most actionable value levers. Our quick wins cluster in **high-readiness, high-impact reporting and data-integration tickets** such as CDH onboarding, Reporting Templates, Consolidated Market Reporting, and automated DMS/PL24 feeds. Together, these elements enable immediate transparency, accelerate market activation, and **create the foundation for continuous improvement.**

Central consolidation

CDH serves as the monthly **data backbone (M+7)**, enabling a seamless launch and accelerating early performance gains. It integrates key **Digital & Data Enablement levers (DR/APIs/REP)** into actionable operational feeds, creates rapid transparency on whitespots (e.g., market, dealer, or channel gaps), and underpins a **continuous improvement program** with robust, cross-regional KPIs.

Enabling success management through a unified IAM reporting backbone

Single source of truth

central, unified IAM fact base; automated monthly and consolidated in the CDH; ensuring consistent, decision-grade reporting across all regions

Insights to intervention

automated detection engine that highlights white spots, deviations, and opportunities and translates them into targeted actions through a systematic diagnose/prioritize/act workflow

Continuous improvement loop

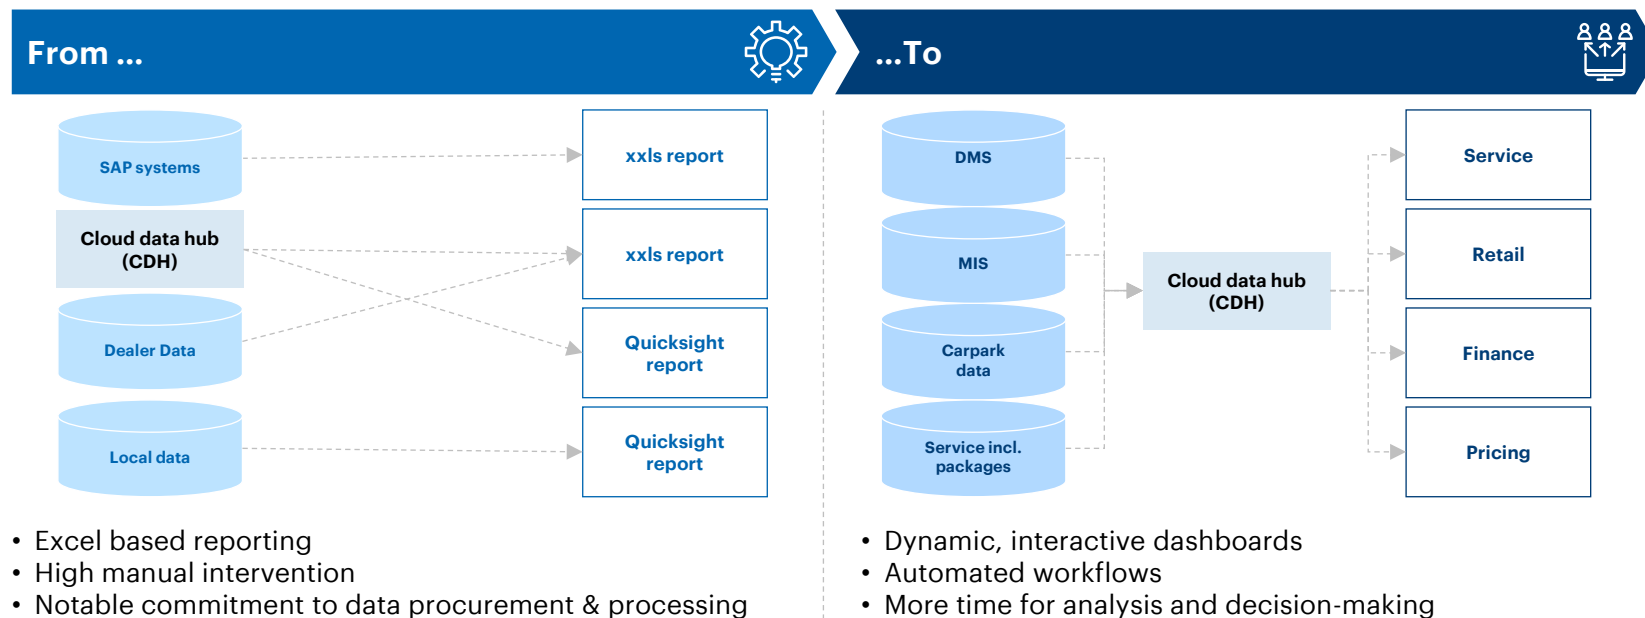

repeatable performance cycle that links data, insights, interventions, and tracking, with the monthly CDH backbone powering continuous productivity gains

In the target state, the CDH is envisioned as the central data source, with a unified reporting layer being built up step by step

Data backbone (transform)

Illustrative

Mobile-enabled dashboards empower real-time visibility into dealer-level performance - at the appropriate level of granularity - strengthening HQ decision-making, market steering, and campaign execution

Premises

- Data harmonization (unified model / stable interfaces / automated ingestion)
- Data availability (SLA delivery / daily freshness / DQ checks)
- Data ownership (BMW owner / role-based access / audit trail)
- Legal & security (lawful use / competition-safe views / encryption & logs)

Accenture value-add

High automation (near-zero manual effort)

Automated pipelines replace spreadsheets and enable daily, error-free updates

Fast, high-performance front-end

Real-time drilldowns and instant insights instead of static reporting

Seamless multi-source integration

PL24, DMS, CRM, market data — unified into one analytics layer

Granular access control

Role- and market-based permissions ensure secure, targeted usage

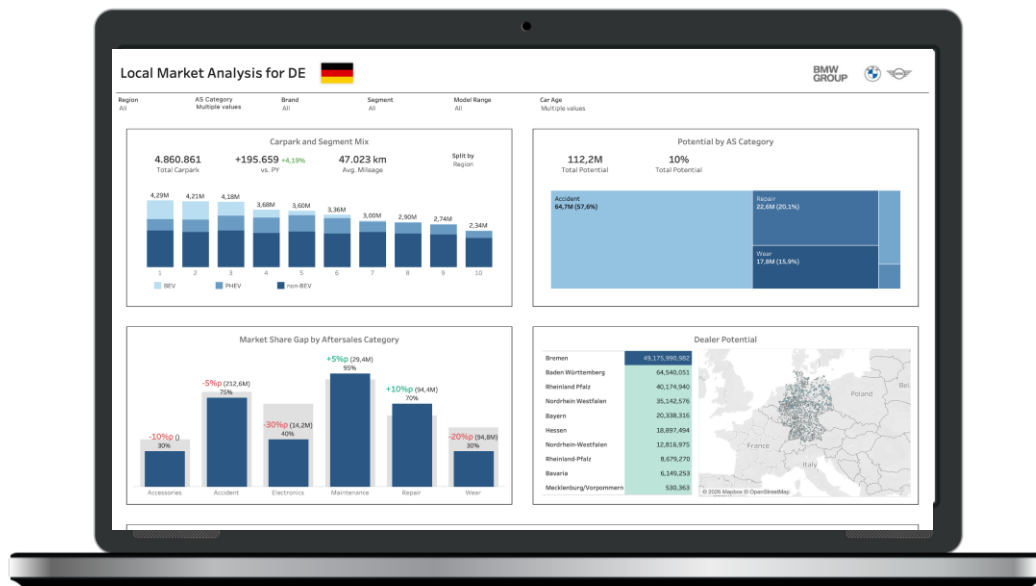

Executive-grade visualization

Interactive dashboards deliver clear narratives, not static slides

The Center for you is the central IAM reporting suite as the core steering cockpit that aligns regions, tracks progress, and drives accountability

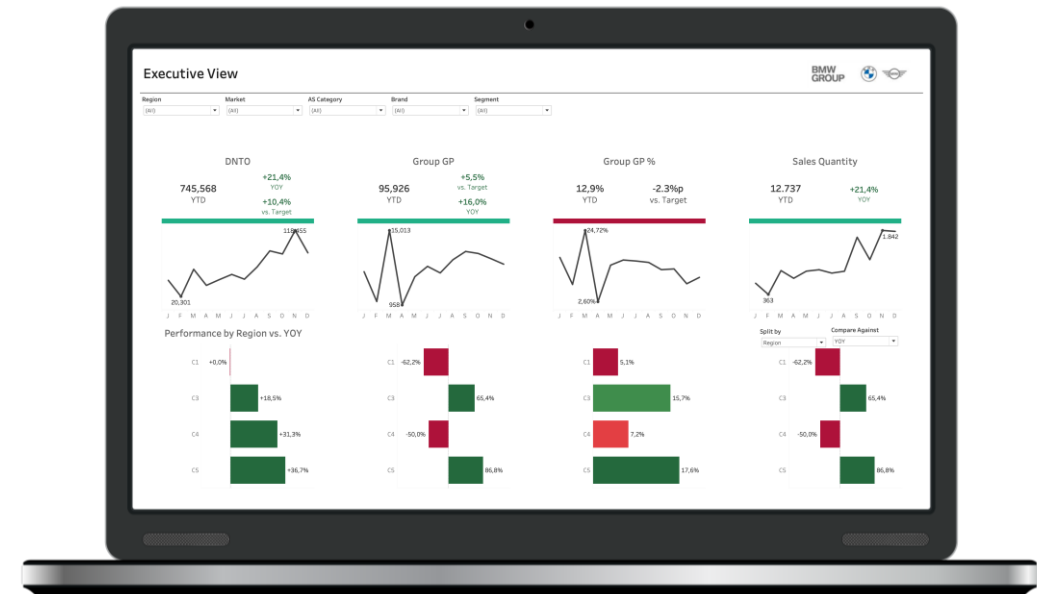

Reporting suite (transform)

Illustrative

View 1 – Local/International market analysis (operational)

The operational view provides a granular market analysis including a segmented car-park overview (e.g., brand, segment, series, engine type), core KPIs with year-over-year changes, and current vs. target market-share performance per AS category, including a quantified gap-to-target.

View 2 – Executive view (strategic)

The executive view offers an aggregated performance snapshot of key KPIs with traffic-light target assessment and trend evolution, complemented by drill-downs to identify root-cause drivers across markets, regions, or models.

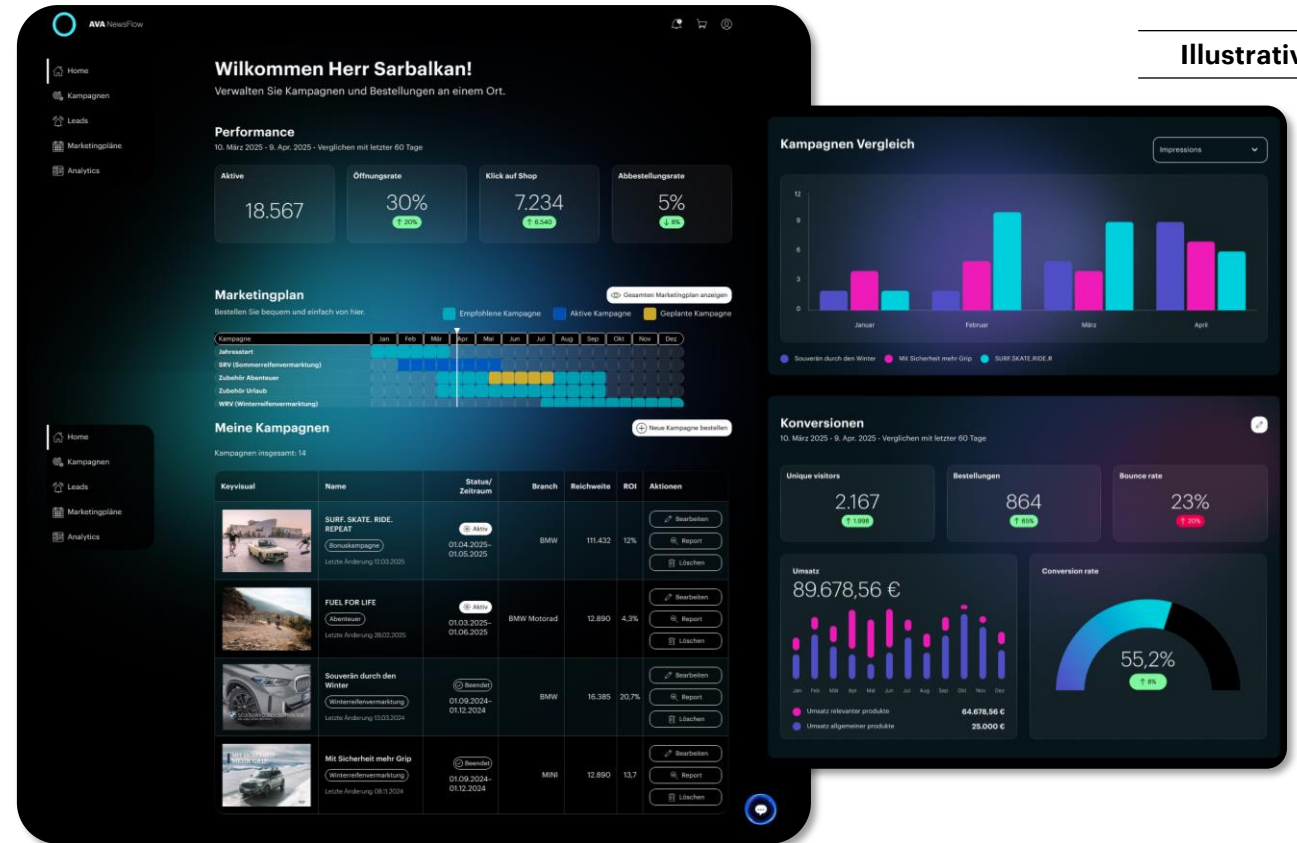

...and will be evolving toward a unified dealer and IR portal as the digital front door of IAM

IAM portal (North Star)

A centralized authorized dealer / IR / CG (self-service) portal creates a single digital touchpoint for communication, tools, insights and enablement. It increases transparency, reduces manual coordination effort and enables scalable IAM growth across markets.

Why this matters:

- Single access point for dealers, IRs and CGs to tools, campaigns, analytics and materials
- Reduced complexity and administrative effort for NSCs and field force
- Data-based steering through usage tracking and performance insights

05

Our team & timeline

The proposed solution and team size are based on a capacity model derived from high-level estimations conducted by Accenture. These estimations build on our experience from working with BMW Germany, complemented by additional high-level input from IAM subject matter experts. Based on this foundation, the proposed capacity has been right-sized accordingly. During the Discovery phase, the detailed requirements will be jointly refined and finalized to ensure full alignment. As an initial planning baseline, Accenture has assumed approximately 0.4 days per Dealer visit and 0.2 days per IR visit. These assumptions have been applied consistently across markets and are subject to validation. As we progress toward finalizing the solution, we will closely align with BMW on expected volumes and effort to ensure transparency, accuracy, and a shared understanding of the required scope.

How we organize for success: clear roles, responsibilities, and governance

Project Location: In addition to providing services at the contractor’s and client’s locations, contractor personnel may perform services or parts of services remotely from a home office, provided that this (i) does not negatively affect the contractor’s ability to fulfill its obligations under the underlying Service Agreement or Data Processing Agreement, and (ii) does not require increased compensation. Remote work in the home office is subject to technical and organizational measures. Any contractual requirements for physical or system-environment security controls at Accenture premises (e.g., secure storage, security personnel, video surveillance) do not apply to home office workplaces. Contractor personnel must ensure compliance with GDPR and any applicable legal and internal information security regulations during home office work. All internal information of the parties, as well as work equipment provided by the contractor to its personnel, must be secured to prevent access by third parties, including family members. Available home office security mechanisms must be used, and passwords or procedures for networks, email systems, and computers must not be shared or easily accessible.

Obligations to Cooperate: BMW will inform the contractor of changes to the AVB, BVB, policies, instructions, and standards referenced in the individual contract. BMW bears the financial and legal responsibility for equipment, system software, applications, other operating resources, and third-party services provided or used by BMW under a contract (including licenses, approvals, or consents), unless the contract explicitly states otherwise. BMW remains responsible for the content and schedule management of its own organizational units and third parties involved in the project, provided they are not subcontractors of the contractor. If BMW fails to fulfill its obligations to cooperate or does so improperly, BMW is responsible for any impact on the quality of deliverables and agreed deadlines. Delivery deadlines will be adjusted accordingly, and any additional costs arising from lack of cooperation will be invoiced according to the agreed rates.

Commercial offer

Accenture's solution is based on scope, tickets/ volumes as provided in the RFP documents and Q&A session with BMW. The actual scope, effort, volumes, seasonality, overtime, performance measures etc. will be validated during due diligence to finalise solution.

The contractor's scope of services does not include legal or tax advisory services, which are reserved by law for the relevant professional groups. BMW is responsible for complying with all applicable legal and regulatory requirements relevant to BMW, the services, and deliverables. BMW will inform the contractor in writing of any requirements arising from these obligations if relevant for service delivery. The same applies to any changes to applicable legal and regulatory requirements affecting BMW services and deliverables during the term of each individual contract. If such changes impact the contractor's service delivery, they shall be agreed upon via the Change Request process. The contractor may rely on the completeness and accuracy of information and documents provided by BMW but must notify BMW of any identified deficiencies.

Commercial offer - Workpackage analysis (1/2)

WP Analysis				
Ticket No.	Ticket Reference	Accenture activities	Expected results	BMW commitments and cooperation
1	Market segmentation	- Collect and harmonize market data - Build market segmentation (e.g., vehicle age, service profiles) - Compute BMW and MINI share by segment and parts category - Recommend focus segments - Deliver NSC-format report and deck for approval	- IAM Potential Analysis for Third-Party Workshop Business (PowerPoint, max. 10 slides) - Calculation in xls - IAM Potential Analysis for Third-Party Workshop Business (PowerPoint, max. 10 slides, xls calculation)	- Provide NSC templates, data standards, and approval timelines - Grant access to local market and car-park data (where available) - Nominate named NSC reviewers for content review and approval - Provide IL and required tool access
2	Customer segmentation (IRs and Garage Chains)	- Conduct ABC-cluster and rank IRs/chains - Produce market/county-level outputs - provide an NSC-approved report and an exportable dataset in Excel	- DB estate (Nachlassanalyse) xls template on dealer level - Customer Analysis for IRs and Garage Chains (xls template done by field force on dealer level with dealer data - 4 hours if dealer input well prepared) - Zufriedenheitsabfrage xls template done by fieldforce while IRs visit or via mail - value calculator (Vorteilsrechner) fill out xls. template	- Provide customer master attributes and IDs - Provide template and approval window - Grant NSC sign-off
3	Business field analysis	- Analyze workshops, parts sales, IRs (sales, VAK, CM, bonus, VKU) over a 3-year look-back - Finalize analysis report	- Business Performance Analysis (PowerPoint, max. 10 slides) - xls. template filled with BMW data	- Provide access to historical KPIs and data sources - Define reporting scope - Grant approval
4	Dealer analysis (authorized BMW Dealers)	- Benchmark each dealer - Conduct car-park comparison - Execute gap analysis by part family/code with quantified leakage - deliver dashboards, executive summary, and data lineage notes	BMW Authorized Dealer Business Analysis incl. 4th Level (IRs), (PowerPoint, max. 10 slides)	- Provide standard dealer and car-park datasets - Provide KPI definitions - Define NSC approval window - Grant systems access
5	Sales channel analysis	- Analyze online vs. offline sales channel (e.g., Partslink24 and other marketplaces) - Define methodology/KPIs/specification, risks/opportunities, and management summary for NSC approval.	- Online Sales Channel Analysis & Potential Assessment for Authorized BMW Dealers and customer-level (IRs and Garage Chains), (PowerPoint, max. 15 slides) - Individual Analysis of pilot sales channels, mostly done by using .xls templates. After pilot .ppt deck max 10-15 slides	- Provide access to dealer, channel, and campaign data - Ensure stakeholder alignment for sign-off - Agree format and timing
6	Product portfolio analysis	- Map portfolio (family codes/part numbers/categories/models) to local car-park - Identify gaps/optimizations - Deliver Excel dashboards for NSC approval	Product Portfolio Analysis by Family Code, Category and Car Model (PowerPoint, max. 10 slides)	- Provide analysis XLS templates and data directly from BMW systems - Provide mapping tables (model/family codes) - Provide CI guidelines - Grant NSC sign-off
7	Creation of a key figure set	- Build financial & qualitative KPI system with role-based views (e.g., C1-DE, MKS, HO/SO/NL) - integrate into C1-DE advanced analytics tool/dashboard	Business Area KPI Framework incl. Financial and Qualitative Key Figures and CI Revision (PowerPoint, max. 10 slides)	- Provide KPI catalogue and rights - Grant CI approval - Grant tool access and technical interfaces

Commercial offer - Workpackage analysis (2/2)

WP Analysis				
Ticket No.	Ticket Reference	Accenture activities	Expected results	BMW commitments and cooperation
8	Logistics strategy	• Develop regional logistics concept • Create one-off business-case template • Deliver dealer-level logistics consulting and potential cooperation scouting/tendering	• Regional Logistics Concept for Authorized BMW Dealers incl. Business Case Template for Independent Workshop Delivery (PowerPoint, max. 10 slides) • Done on dealer level by field force or dealer coach, fill out xls. template for calculation	• Nominate HO / SO / NL contacts • Provide requirements specification • Define decision and funding gates for cooperations
9	Parts basket pricing	• Conduct OES benchmarking • Conduct pricing study & scenario analysis (incl. elasticity) • Establish governance with NSC & CA-25 and implement approved measures & monitoring	• Parts Basket Pricing Study & Implementation of Pricing Measures incl. NSC / AG Approval and CA-25 Alignment (PowerPoint, max. 25 slides)	• Provide access to price and volume data • Ensure CA-25 / CA-230 alignment • Grant final approvals • Define KPI targets

Commercial offer - Workpackage planning

WP Planning				
Ticket No.	Ticket Reference	Accenture activities	Expected results	BMW commitments and cooperation
10	Business planning (e.g. marketing activities, campaign management, bonus schemes)	• Curate toolbox of measures (events, schemes, campaigns) aligned to market strategy • Introduce implementation & measurement logic • Create NSC submission package	• Trade Measures Framework incl. Selection of Strategic Measures (e.g. BMW Toolbox, Events, Conferences, Bonus Schemes), Calculation in xls., (PowerPoint, max. 30 slides)	• Provide strategy frame • Define target KPIs • Grant approvals • Define resource gates
11	Project planning	• Create master roadmap incl. Milestones • develop clear campaign/action/project plans incl. risk & resourcing information • Develop focus-parts campaign concept including lost-sales analysis & KPIs	• Integrated Roadmap, Timeline and Milestone Plan for Campaign and Project Execution (PowerPoint, max. 10 slides) realistic	• Provide NSC calendar • Define priorities and owners • Confirm templates and tool usage • Provide your feedback on BizChat
12	Calculation of Business case	• Cost/benefit model • Conduct sensitivity analysis • Write executive summary • Consolidate information in a NSC package • Create lost-sales reporting concept for PL24/AOS	• Business Case for Implementation Measures incl. - Cost Calculation and Budget Impact in .xls, (PowerPoint, max. 10 slides) Could be very time consuming if BC includes dealer perspective, calculation in .xls needed	• Provide templates • Provide data sources • Grant approval • Define target corridors

Commercial offer - Workpackage development (1/5)

WP Development				
Ticket No.	Ticket Reference	Accenture activities	Expected results	BMW commitments and cooperation
13	Dealer visit (authorized BMW dealer)	- Perform dealer on-site visits, write dealer performance review, conduct portfolio assessment, and do training-needs check - Establish standardized dealer report and NSC upload (incl. C1-DE expert circles)	Finalized and uploaded visit report (BMW System)	- Provide visit plan and dealer list - Provide report template - Grant portal access - Define approval timeline
14	Dealer assessment (authorized BMW Dealer)	- Perform dealer on-site health check and audit vs. IAM principles - Formulate improvement plan per-dealer - Enable local system upload & NSC review	Finalized BMW Dealer Network Health Check and Action Plan (uploaded in BMW System)	- Provide principles and audit criteria - Grant NSC system access - Nominate reviewers
15	Dealer coaching (authorized BMW Dealer)	- Perform on-site coaching for new dealers/ failed audits /principles coaching - Create action plan with concrete timelines and submit to NSC	Performed On-site Dealer Coaching incl. Documented Action Plan (incl. Timeline) (PowerPoint, max. 10 slides)	- Define target agreements - Select dealers - Provide coaching guides and CI
16	Individual dealer coaching (authorized BMW dealer)	- Formulate development plan per-dealer (customer structure, pricing, ordering channels, comms, field service) - Report monthly target-tracking to NSC	Individual Dealer Development Plan for Selected Authorized BMW Dealers reported to the NSC (PowerPoint, max. 15 slides)	- Select focus partners - Provide target-agreement framework - Grant online-system access for demos where needed
17	Customer visit (IRs, Garage Chains).	- Conduct on-site visits - Provide systems support & training (AOS / PL24 / online ordering) - Create visit reports - Upload data - Define action plans - Track KPIs	Finalized and uploaded customer visit report (BMW System)	- Provide target and visit lists - Provide reporting templates - Grant system access - Grant NSC approvals
18	Customer assessment (IRs, Garage Chains)	- Assess turnover-potential and define improvement plan per customer - Submit to NSC and upload data in local format	Finalized Customer Health Check (IRs / Garage Chains) incl. On-site Assessment and Action Plan (uploaded in BMW System)	- Provide assessment framework and KPIs - Grant access to IDs and data - Define approval window
19	Bonus concept	- Define bonus framework (qualitative & quantitative streams) - Define KPI catalogue & targets - Define payout logic - Define governance - Submit to NSC	IAM Bonus Concept for BMW Dealer Incentivization and Growth incl. Management Summary for NSC Approval (PowerPoint, max. 10 slides)	- Conduct Finance and Compliance reviews - Define target levels - Grant approvals
20	Incentive	- Design concept and organization of six event weekends - Steer participants - Monitor goals - Prepare LUKS tax lists - Provide on-site support	Finalized Loyalty Incentive incl. Concept, Implementation and System Documentation (BMW System) (PowerPoint, max 10 slides)	- Define goals and selection criteria - Grant budget approval - Provide CI and tax guidance
21	Online Sales Channels onboarding for IRs (e.g.: AOS/Partslink 24 or other local online ordering systems)	- Create IR accounts - Link to authorized dealer - Connect AOS ↔ PL24 - Trigger first order - Report adoption - Ensure dealer readiness checks	AOS / PartsLink24 Customer Account Creation and Connection to at Least One Authorized BMW Dealer	- Grant system access - Grant NSC approvals - Provide target lists - Ensure dealer settings (discount matrix, stock availability flag)

Commercial offer - Workpackage development (2/5)

WP Development				
Ticket No.	Ticket Reference	Accenture activities	Expected results	BMW commitments and cooperation
22	AOS & PL24 (AOS 2.0) Training	- Define annual concept. - Deliver 15 courses p.a. (example DE) - Schedule venue (e.g., TAK) - Exhibit at 1 tradeshow. - Create photo protocol. Stage 1 – Markets & Dealers: Strategic enablement - Define the training landscape for AOS 2.0 & PL24 and conduct market-specific training needs analyses across AOS, PL24, and related tools (e.g. KeyReader). - Align training approach and rollout logic with market maturity, incl. differentiation between market-individual and regional training concepts. - Support rollout readiness by coordinating activities related to AOS & PL24 account setup, dealer linking, and first-order readiness in collaboration with BMW. Stage 2 – Dealers: Co-creation and enablement - Develop market-specific training materials such as playbooks and checklists, leveraging Accenture experience and BMW expert input. - Design and execute a train-the-trainer approach for dealers and field force, incl. coaching and piloting of AOS 2.0 features and KeyReader usage. - Enable dealers to act as multipliers for IR adoption, strengthening dealer-IR-BMW collaboration through shared tools and aligned processes. Stage 3 – Dealers & IR: Full-service training delivery - Deliver hands-on, end-to-end trainings covering parts platforms, aftersales information, ordering workflows, campaigns, and ISTA. - Provide modular training formats (on-site, virtual, hybrid), supported by digital learning content and usage-based reporting. - Support market-wide training delivery via certified trainers, incl. coordination with centrally governed training locations and trade-fair activations.	- Performed Germany-Wide AOS Dealer Training (Photo Protocol) Support of the training sessions, coordination with the market and the training academy, alignment of content with the trainer, and, if required, support with the PowerPoint presentation .ppt (max 15 slides) - Market-specific training needs analysis and defined training landscape for AOS 2.0 & PL24. - Aligned training strategy and rollout approach reflecting market maturity and readiness levels. - CI-aligned training materials (playbooks, checklists, supporting content) tailored to market and audience. - Train-the-trainer enablement package, incl. coaching approach and piloting support. - Executed hands-on trainings for dealers and IRs covering end-to-end AOS & PL24 usage. - Modular training delivery setup, incl. digital learning assets and usage-based reporting inputs. - Documentation of training execution and adoption support, incl. coordination with certified trainers and central training formats.	- Provide strategic objectives, rollout priorities, and context for AOS 2.0 & PL24. market. - Provide access to AOS, PL24, and related systems and ensure availability of required setup information (accounts, dealer linking, readiness status). - Provide BMW expert input and content for training materials, incl. product, process, and tool knowledge. - Nominate and enable BMW trainers, field force, and dealer participants for training and train-the-trainer activities. - Provide CI guidelines, training standards, and quality requirements applicable to all training formats. - Ensure timely reviews and approvals of training concepts, materials, and rollout approaches. - Support coordination with central training locations and trade-fair activities, incl. access and scheduling.
23	Technical Support AOS 2.0 & PL24	- Pilot new AOS apps (incl. KeyReader) - Evaluate and derive measures with BMW functions - Prep rollout - Integrate into T22 training	AOS Application Pilot incl. KeyReader Integration and Evaluation Documentation (Excel .xls and PowerPoint .ppt max 10 slides)	- Provide access to C1-DE / CA-X specialists - Grant pilot approvals - Coordinate into training cal

Commercial offer - Workpackage development (3/5)

WP Development				
Ticket No.	Ticket Reference	Accenture activities	Expected results	BMW commitments and cooperation
24	IAM Marketing portal onboarding	• Create accounts • Provide quick-start guides • Coach users to leverage portal features	• Local IAM Marketing Portal Account Creation and Access Enablement.	• Grant portal access • Define roles and permissions • Provide CI and content policies
25	Parts basket Localization	• Analyze national car-park. • Recommend national Parts Basket. • Maintain at least 2x/year (supersessions, non-performers) • Obtain NSC & AG confirmation. • Design and operationalize a centrally governed, data-driven parts basket approach to identify the most relevant parts per market. • Analyze vehicle population, service demand, and sales data to prioritize high-impact parts categories. • Translate centrally defined parts baskets into market-individualized selections while maintaining BMW governance. • Prepare BMW-approved marketing templates enabling dealers to activate parts basket campaigns locally. • Integrate parts basket logic into the marketing hub, enabling access, personalization, and distribution by dealers.	• Localized Parts Basket aligned with Central IAM Strategy incl. Market Validation and NSC / AG Approval. (Powerpoint, max 5 slides; Excel .xls) • Market-specific parts basket definitions, derived from centrally governed data logic. • BMW-approved campaign templates supporting promotion of prioritized parts baskets. • Dealer-ready marketing assets available via the marketing hub for local personalization and execution. • Documentation of parts basket logic and selection rationale for transparency and governance.	• Provide access to relevant data, including vehicle population, service demand, parts sales, and failure-rate insights where applicable. • Provide BMW brand, CI, and content guidelines, incl. approval requirements for marketing and sales materials. • Provide product and technical expertise to validate parts selection logic and product argumentation content. • Define and approve governance rules for central vs. local adaptation within the marketing hub. • Ensure timely reviews and approvals of parts baskets, templates, and argumentation content at NSC level within agreed timelines. • Enable access to and coordination with BMW systems and platforms required for marketing hub integration.
26	Product Argumenter	• Develop CI-compliant, fact-based product argumentation content for BMW original and reman parts. • Structure product argumentation to clearly highlight BMW original parts benefits vs. aftermarket alternatives. • Align argumentation content with dealer and IR sales use cases, ensuring applicability in customer interactions. • Integrate product argumentation assets into the centrally governed marketing hub for consistent reuse across markets.	• Finalized Product Argumenter (Digital Version, Not Printed - max 5 pages per ticket) • CI-compliant product argumentation content highlighting BMW original and reman parts benefits. • Standardized sales argument modules enabling clear, consistent dealer and IR communication. • Marketing-hub-ready content assets for scalable distribution and reuse across markets.	• Provide access to relevant data inputs, including vehicle population, service demand, parts sales, and failure-rate insights where applicable. • Provide BMW brand, CI, and content guidelines, incl. approval requirements for marketing and sales materials. • Provide product and technical expertise to validate parts selection logic and product argumentation content. • Define and approve governance rules for central vs. local adaptation within the marketing hub. • Ensure timely reviews and approvals of parts baskets, templates, and argumentation content at NSC level within agreed timelines. • Enable access to and coordination with BMW systems and platforms required for marketing hub integration.

Commercial offer - Workpackage development (4/5)

WP Development				
Ticket No.	Ticket Reference	Accenture activities	Expected results	BMW commitments and cooperation
27	Merchandising products	- Consult HO/SO to identify suitable advertising and merchandising materials and align with the business department - Develop up to max. three product ideas aligned with BMW brand identity and target audience per request - Define materials, quality levels, and specifications in compliance with BMW CI and licensed artwork requirements - Identify, select, and coordinate with suitable manufacturers and suppliers - Prepare and issue RFQs; collect, compare, and consolidate supplier quotations - Present proposed merchandising assortment and supplier quotations to the NSC and support approval - Prepare the purchasing process in accordance with BMW specifications - Steer and monitor production, including layout, design alignment, and delivery timelines - Steer and monitor production, storage, and outflow of merchandising products, including regular performance evaluation	- Up to three CI-compliant design concepts/product proposals per request are created and handed over to BMW (ppt, max 10 slides) incl. up to two feedback loops - Consolidated supplier overview incl. comparison, and recommendation is prepared, handed-over and documented (Confluence, 1 page) - BMW-specific purchasing process is steered and all required inputs and documentation provided in time - Merchandising production is steered and status report, handed over to BMW, documenting production status, storage and outflow overview, milestones, risks, and performance indicators (Confluence, 1 page) - Merchandising products are handed over to BMW, including final specs, artwork files, and supplier details	- BMW provides a list of BMW-approved and/or preferred merchandising manufacturers and suppliers to be considered during supplier selection (for all countries where available) - BMW acts as the contractual partner towards selected manufacturers and suppliers, including supplier contracting, purchase order issuance, invoicing, and direct payment handling - BMW informs Accenture of relevant merchandising requirements/tickets, and associated timelines at least three months in advance - BMW provides timely decisions, feedback, and approvals, including: – feedback on concept/product proposals – selection decisions on supplier quotations – approvals at NSC level within agreed timelines - BMW provides all relevant brand, content, and business inputs, including but not limited to: – CI guidelines and updates – licensed BMW artwork and assets – brand messaging, copies, and texts – target audience and usage context - BMW ensures availability of HO/SO and business stakeholders for required alignments and consultations within agreed response times - BMW prepares and executes all procurement-related steps in accordance with BMW internal processes and specifications, including order placement and supplier onboarding - BMW remains responsible for operational execution, including manufacturing, logistics, storage, and physical distribution of merchandising products, either directly or via contracted suppliers - BMW provides access to relevant information and systems required for coordination and documentation (e.g. specifications, approvals, supplier information)

Commercial offer - Workpackage development (5/5)

WP Development				
Ticket No.	Ticket Reference	Accenture activities	Expected results	BMW commitments and cooperation
28	First-level support -IAM Parts Ordering	• Operate phone/email desk • Ensure SLA reply $\leq$ 2 working hours during business hours • Apply standardized scripts/processes • Report monthly (volume, conversion, TTR, CSAT)	• IR Parts Ordering Support via Call and Email (BMW Genuine Parts)	• Confirm SLA • Provide dealer contacts • Provide reporting templates and NSC upload destination • Grant access to documents, systems, and trainings • Define responsibilities and escalation paths
29	First-level support - system/technical topics	• Perform frontline troubleshooting (AOS, PL24, marketing portal) • Resolve / forward within $\leq$ 3 working days • Analyze topics monthly	• Dealer Support for IAM Systems (AOS, PartsLink24, Local Marketing Portal) via Call and Email	• Define escalation paths and internal contacts • Grant access rights • Define SLA targets • Grant access to documents, systems, and trainings • Define responsibilities and escalation processes
30	First-level support - administrative topics	• User/permission admin; procedural help; route technical issues within $\leq$ 3 working days; monthly report	• Dealer Marketing Support via Call and Email (e.g. Marketing Toolbox, Campaigns)	• Provide governance and procedure guides • Define access policies • Grant approvals • Grant access to documents, systems, and trainings • Define responsibilities and escalation processes
31	First-level support - IAM program related topics	• Administer users and permissions • Provide procedural help • Route technical issues within $\leq$ 3 working days • Report monthly	• Dealer Support for IAM Program Topics (e.g. KPIs, Bonus) via Call and Email	• Provide program documentation • Provide KPI and bonus definitions • Define escalation paths • Grant access to documents, systems, and trainings • Define responsibilities and escalation processes

Commercial offer - Workpackage success management

WP Success Management				
Ticket No.	Ticket Reference	Accenture activities	Expected results	BMW commitments and cooperation
32	Reporting templates	- Design financial & qualitative dashboards/reports (ACTUAL / PER / ΔPY, Top / Flop, Forecast; training status, PL24 usage, audits, campaigns) - Design GIS maps if required	KPI Reporting and Dashboard Template in Excel aligned with NSC Requirements	- Share and finalize per-NSC KPI set - Provide CI and tool requirements (FW dashboard) - Grant approval - Ensure data provisioning - Define Einheitliche Datenbegriffe and reporting standards - Clarify / define NSC Änderungsübersicht
33	Data analytics	- Access DMS data; ETL; cleansing; modeling - Monitor KPIs (sell-in/sell-out, marketing, dealer) - Conduct bonus assessments (Cobis) - Run weekly cadence	Consolidated DMS Data Collection and KPI Reporting for Sales and Performance Monitoring in Excel	- Grant DMS and Cobis access - Provide DMS field-mapping table per market - Define KPI targets and definitions - Define acceptance windows - Align KPI nomenclature and logic - Clarify bonus logic (technical requirements) - Ensure data quality - Ensure complete and consistent DMS data
34	Data transfer to internal BMW systems	Deliver monitored data to local BMW systems in the agreed format/cadence	Transfer of Reporting Data into Internal BMW Systems	- Grant access to internal BMW systems - Define target systems and formats - Provide technical interfaces - Confirm receipt confirmation process - Define Zielformat - Clarify compliance
35	Quality test	- Perform random checks of dealer evidence (~2,900–3,500 uploads) - Tag as fulfilled / fulfilled with improvement potential / not fulfilled - Prepare monthly results and bonus leveling prep	Dealer Certificate Validation and Quality Control for Bonus Payments in eVKU (Sgate)	- Grant eVKU and Sgate access - Define criteria - Grant NSC approval
36	PL24 - KPI monitoring	- Monthly analysis of PL24 usage (sales, share, interfaces, campaigns, availability display) - GIS map & dashboard upload	Monthly PL24 System Usage Analysis incl. GIS-Based Reporting and Dashboard Integration	- Provide data exports and access - Integrate FW dashboard where requested - Grant approvals - Assume Excel format
37	Consolidation of market reports	- Consolidate to a single CA-230-specified format - Validate data quality - Upload to CDH within 7 working days after month-end	Consolidated Market Report incl. Data Quality Validation and CDH Upload (CA-230 Format)	- Provide CA-230 formatting specification - Grant CDH access - Provide market data feeds
38	Central Steering	- Provide quarterly overview per region/market - Operate centralized reporting layer - Govern centralized Parts Basket - Support BMW Toolbox deployment - Handle ticketed work only	Quarterly Overview Report of Executed Measures and Achievements per Region and Market (C1–C5) (PowerPoint, max. 10 slides)	- Enforce “ticket-only billable” rule - Ensure NSC and Legal involvement - Provide templates and KPIs - Ensure regional consolidation

Commercial offer - Workpackage collision

WP Collision				
Ticket No.	Ticket Reference	Accenture activities	Expected results	BMW commitments and cooperation
39	Collision estimate data	- Identify data sources - Establish 4th-level registration & API ingestion - Automatically receive and store estimates to quantify opportunity & lost sales	4th Level Estimate Data Reception and Storage Capability (PowerPoint, max. 8 slides)	- Grant DVIA and privacy approvals - Define parameter settings - Grant NSC acceptance
40	Parts sales conquests	- Build/maintain competitive part-number & market pricing database - Issue targeted offers to 4th level - Follow-up/negotiation - Record lost sales - Enable NSC analytics on funds, rebates, and outcomes	Competitive Collision Parts Database and Targeted Offer Enablement for 4th Level Growth: - Campaign & Database Concept (PowerPoint, max. 10 slides) - Competitive pricing master file (Excel, 1 structured database file)	- Define conquest-fund parameters - Define dealer rebate rules and timelines - Define compliance guardrails - Grant NSC access to analyses
41	Proactive total loss avoidance	- Detect estimates breaching TL-rules. - Provide quotes to 4th level within 1 working day inside NSC parameters; - Follow-up; - Analyze effectiveness/funds usage.	Proactive Total Loss Avoidance Program incl. Estimate Review and Special Offer Management: Program & Rules Framework (PowerPoint, max. 8 slides)	- Define thresholds, rules, and review cycle - Define funding parameters - Ensure rapid NSC availability for edge-case approvals
42	National account compliance	- Identify MSOs - Assess loyalty - Administer national pricing agreements - Implement compliance processes - Monitor and report	Collision IR Group (MSO) Program Setup and Compliance Management for BMW Parts Growth: MSO Governance & Compliance Concept (PowerPoint, max. 10 slides)	- Define price and target corridors - Provide contractual frameworks - Grant approvals and define escalation lines
43	Programme analysis	Provide a report suite (ROI, dealer rebates, effectiveness) plus scheduled programme reviews in NSC-agreed format	Collision Programm Effectiveness and Portfolio Analysis (Excel or PowerPoint, max. 10 slides)	- Grant NSC read and access rights - Define review dates - Provide standard formats

General Assumptions and BMW Obligations

BMW shall provide timely support from each NSC location regarding process-specific details, tool information, and data required to conduct the analysis and planning study across all locations. BMW will also provide access to all necessary information, systems, and templates to enable efficient service delivery.

The scope of Services does not include regulated services or functions and activities, including those requiring an accounting, legal, payroll, tax, advertising, finance, telecommunications, or other professional license or registration. BMW will instruct and direct Accenture on how to comply with laws applicable to BMW and its business and will provide in-country, locally qualified professionals to review, supervise, and approve any relevant Services and work product where required. BMW will promptly inform Accenture if BMW considers that any Accenture Deliverables are false or misleading or in any way contrary to law, applicable codes of practice, or adjudication of advertising standards or regulations directly applicable to the Services.

Out of scope are the following activities: Direct inside sales, outbound activities, telesales, or Accenture directly selling in any other way to BMW's enterprise customers or distributors. Finance and accounting activities, including invoicing, operating or managing BMW bank accounts, making payments on BMW's behalf, or collecting payments on BMW's behalf. Security services, including but not limited to managed security services, cyber defense services (such as penetration testing, vulnerability assessment services, threat hunting, and incident response services), or any monitoring, scanning, testing, assessments, or remediation of security vulnerabilities in BMW environments.

As Accenture personnel may directly interact with BMW's partners, dealers, or other parties on BMW's behalf: (a) BMW will provide Accenture with clear, objective, and non-discretionary instructions for the in-scope work and will review and sign off on Accenture processes and work products prior to implementation. For example, FAQs, scripts, instructions, language, and process flows for dealer visits will be reviewed by BMW for acceptance and sign-off; (b) BMW will be responsible for ensuring that Accenture has the right to utilize the relevant tools and telephony systems to perform the Services; (c) if recording is required, BMW shall provide Accenture with the exact wording to obtain consent from third parties for discussions to be recorded.

"WFH – Work From Home" arrangements would be accepted.

The proposed transition plan assumes that the contract will be signed on or before April 20, 2026. An LOI/LOE would be facilitated in the interim to enable Accenture to mobilize resources for transition planning and execution.

Accenture will require one week of pre-process training, three weeks for knowledge transfer, and two weeks of service rehearsal. It is assumed that BMW will provide access and tool training for all Accenture resources assigned to the project prior to the commencement of the knowledge transfer phase.

Over time, Field Force productivity will be enhanced through the learning curve and improved visit timing. By optimizing visit routes, strengthening meeting preparation, sharing data in advance, and shifting part of the engagement to remote formats, we assume that time spent at dealers and workshops (customers) can be reduced by a minimum of 10% per year.

Assumptions related to Hub Model

We assume that during a typical day, a Field Force representative covers two dealers (0.4 PD each) and three to four IRs (0.2 PD each). In-country road travel estimates are based on an assumption of USD 1,800 per month per field support resource. This estimate would increase proportionately for any additional markets covered from the hub center. For large geographies (e.g., China and Australia), we assume a primary focus on urban areas, with proximity defined as within a two-hour drive or a 50 km radius. This approach ensures realistic travel effort and cost assumptions while maintaining operational efficiency.

Alexander Kluth

Legal terms (1/2)

Legal terms

Accenture offers the services described in this proposal based on the "BMW Group General Terms and Conditions for Indirect Procurement (as of November 2022, editorial revision to 27.06.2024)" ("GTC") and the "BMW Group Special Terms and Conditions for Consulting and Training Services (as of November 2018)" ("STC") with the following clarifications/additions. Where possible, we have relied on existing agreements between the companies. In case of discrepancies, the following provisions take precedence over the provisions of the GTC and STC.

1. Industrial property rights and copyrights.

Section 13.3 of the General Terms and Conditions is supplemented as follows: The unrestricted granting of rights pursuant to Section 13.3 of the General Terms and Conditions of Business does not extend to models, methods, auxiliary programmes, programme modules, programme components such as libraries, pre-existing materials or standard products used by the Contractor, or modifications or additions thereto, which are used for the performance of the contract. The Contractor grants BMW a non-exclusive right of use to these preliminary products, unlimited in terms of time, content and location, to the extent that BMW reasonably deems necessary for the use of the work results within the BMW Group. This also includes use by third parties commissioned by the BMW Group, insofar as this is necessary for use by the BMW Group or these third parties contribute to the use of the services by the BMW Group. This also includes the further development and maintenance of the work results. Independent use, independent of the work results, is excluded. The contractor shall inform BMW within the scope of the offer of the use of pre-existing materials of the contractor or third parties as part of the work results, insofar as this occurs.

2. Limitation of liability.

1. The liability of the parties shall be limited in each individual case to EUR 10 million and, in total for each contract year, to the higher of the following amounts:
 - a. The amount of remuneration that BMW AG has paid or was required to pay under an individual order in the last 15 months prior to the occurrence of the damaging event, or.
 - b. 150 % of the annual contract value.
 - c. but at least EUR 10 million.
2. Liability for loss of profit is excluded.
3. The above limitations of liability shall not apply.
 - a. in cases of intent and gross negligence,
 - b. to claims for which there is an obligation to indemnify,
 - c. to damages resulting from unjustified termination of the contract, unjustified refusal to perform or unjustified refusal by the contractor to provide termination support services.
 - d. for damages resulting from injury to life, limb or health,
 - e. in the case of product liability,
 - f. in the case of legal defects,
 - g. for damages suffered by a party resulting from the violation of a law or other legal provisions by other parties, and.
 - h. for damages resulting from the violation of confidentiality obligations by a party.

Legal terms (2/2)

4. Damages resulting from the violation of data protection obligations are covered by the liability provisions in the 'Agreement on Data Processing on Behalf' dated 21.11.2025.
5. Insofar as the terms 'ensure' or 'guarantee' are used in the contracts, these describe the regular performance obligation and are not to be understood as a representation without fault or as an independent guarantee within the meaning of Sections 444, 639 of the German Civil Code (BGB).

3. Termination

In case a termination is agreed to by the Parties, the following applies: 1. In the event of termination of the contract, the contractor's remuneration shall be governed by the statutory provisions (Sections 648, 648a (5) of the German Civil Code (BGB)). 2. Work results shall be handed over to BMW in the form existing at the time of termination of the contract against payment of the remuneration payable in this case. 3. The parties agree on a notice period of 12 weeks.

4. Conflict of interest

Regarding possible conflict of interests, the following applies: It has long been customary at Accenture to maintain or service relationships with multiple clients within industries, including those with conflicting economic interests. Accenture is committed to maintaining the confidentiality of each client's information in all such situations. Accordingly, the client acknowledges and agrees that Accenture has worked, is currently working, or may work in the future for other companies whose interests conflict with those of the client, including parties with whom the client (i) competes, (ii) has an existing or potential business relationship (e.g., suppliers or distributors), (iii) participates in tenders, and (iv) enters into or considers merger, acquisition, alliance or joint venture transactions, provided that Accenture has at all times established appropriate information barriers to protect the confidentiality of the information provided by the customer.

5. Tax

The parties agree that the provisions regarding taxes within the meaning of Clause 10.1 of GTC refer to the tax laws applicable on the day the contract is signed. If there are changes in tax law during the term of the contract that result in a higher tax burden for the contractor when fulfilling its obligations under this agreement, the parties will try to reach an amicable solution by means of the amendment procedure. If the parties are unable to reach such an amicable solution within 14 days, the increased costs will be borne equally, i.e. 50/50, by both parties. A "change in tax law" means any new tax laws, regulations, ordinances, provisions, guidelines or other comparable rules or a change in their application.

6. Data Protection

(Supplementary provision to the "Agreement on data processing on behalf of a controller" 21.11.2025)

Insofar as the contractor processes personal data in the course of providing services, the "Agreement on Data Processing on Behalf of the Contract" dated 21.11.2025 ("Framework Agreement") shall apply; the parties shall supplement this agreement, if necessary, with a description of the additional data processing under this agreement.

- With reference to clause 11 of the Framework Agreement, the liability of the parties to each other under this contract, including all related orders and call-offs, for damages under the Framework Agreement is limited as follows and conclusively regulated for services in this context:
 - The parties shall be liable without limitation (i) in the case of intent and gross negligence, (ii) for damages resulting from injury to life, body or health, (iii) for damages for which mandatory statutory liability is provided (e.g. liability under the Product Liability Act).
 - With regard to all other damages under the Framework Agreement, the liability of the parties is limited in amount to 10 million EUR in each individual case and in total for each contract year to the higher of the following amounts:
 - The amount of remuneration that BMW AG paid or was obligated to pay in total under this individual contract in the last 15 months before the occurrence of the damaging event or
 - 150 % of the annual order value under this individual contract or,
 - at least 10 million EUR.
 - Liability for lost profits is excluded.

Professionalization of sales- & marketing approach for aftersales in German market

BMW C1-DE-A

Client background & context

Initial challenges:

- In the automotive industry, aftersales services are one of the most important profitability drivers for OEMs. At the same time, as it is for BMW Group, the business is confronted by changing customer expectations, a heterogeneous product & service portfolio and declining market share in a highly competitive market landscape

Objective:

- In this respect, BMW has decided to professionalize their Sales- & Marketing strategy, analyze their portfolio and adopt a future-oriented approach while staying focused on the customer
- Due to our specialized knowledge of the aftersales segment and our long-term cooperation in the field, we were commissioned to support the client along three main areas – customer centric from Sales- & Marketing operations to new coherent aftersales service offerings

Accenture's approach

Professionalization of aftersales sales- & marketing strategy

- Setting up targeted positioning and marketing concepts to boost business, developing rollout concepts & coaching for scalability as well as simplify & professionalize the process landscapes for common planning & steering

Consumer study on subscription based aftersales service package

- Conduct a holistic consumer study capturing all relevant aspects that influence the purchase decision to support BMW in creating a coherent aftersales offering by derivate consumers' service preferences & willingness to pay for the different service packages

Concept for coherent aftersales service offerings

- Carry out a 6-week conceptual task force to address and restructure BMW's product and service portfolio surrounding Service Inclusive to co-create a future-oriented subscription based aftersales service package

Outcomes

- **Process optimization and simplification** through introduction of agile PMO approach and data-driven business steering
- **Derived future oriented Aftersales product portfolio and marketing activities** in a customer centric way
- **Successful system rollouts** to support dealers in the professionalization of their business with independent service providers

New parts trading business model – strategy definition & operationalization

Premium Automotive OEM

Client background & context

Initial Challenges:

- Evolving aftermarket dynamics impacting the parts trading business
- Increased competition from highly professional wholesalers
- Rising expectations from Independent Service Providers (ISPs) and B2B customers
- Need to address inefficiencies and adapt to changing market demands

Objective:

- Develop a new approach to enhance the parts trading business and operating model
- Optimize processes and improve service offerings
- Align with heightened expectations of ISPs and B2B customers
- Strengthen market position and drive sustainable growth

Accenture's approach

Status quo analysis:

- Conducted a detailed analysis of the current state, including workshops and interviews with the client to identify key challenges and opportunities

Future service portfolio design:

- Defined six building blocks and corresponding concepts for the future parts service portfolio targeting ISPs
- Developed a business case and outlined the required organizational structures to create a holistic target picture for the client

Implementation preparation:

- Prepared the next steps for implementation and operationalization to ensure a smooth transition and execution of the defined strategy

Outcomes

- **Enhanced service portfolio:** Improved the Parts Trading Service Portfolio for ISPs in Germany and selected European markets
- **Professionalization:** Advanced the Parts Trading business through refined steering models, retail standards, and organizational structures
- **Operationalization:** Developed and initiated the operationalization of concepts, including detailed approaches, work packages, and an implementation plan

Creation and continuous development of a sales support system

BMW C1-DE-A-20

Client background & context

Initial challenges:

- An expanding and aging vehicle fleet, coupled with a changing model mix, has led to decreasing service retention rates
- The growing transparency driven by digitalization is reshaping customer expectations and market dynamics

Objective of the sales support system:

- The primary goal is to boost Over-the-Counter (OtC) parts sales by effectively targeting Independent Service Providers (ISPs) through competitive pricing, enhanced services, and innovative digital solutions

Sales support system overview:

- Empower branch offices and authorized premium OEM partners to strategically engage ISPs with attractive parts pricing and tailored offerings
- Focus on increasing OtC parts sales by addressing the needs of ISP customers, who are beyond the reach of traditional premium OEM services

Accenture's approach

Central coordination & steering

- Provision of a complete sales support model focusing on complete and highly competitive parts
- Provision of coaching guideline, coaching modules & pricing concept
- Continuous coordination with multiple internal and external stakeholders for further development
- Development and conduct of campaigns for highly competitive parts

Local coordination & steering

- Dealer selection, kick-off & onboarding
- Steering through monthly status & dealer visit reports

On-site coaching at the dealer

- Coaching focus on Sales & Operation Excellence modules
- Process: Gap Analysis → Coaching → Closing
- Provision of status reports

Outcomes

- **Market share:** 25.7% of parts sold to Independent Service Providers (ISPs) by OEM branch offices and premium OEM partners in 2023
- **Participation:** A total of 265 premium OEM branch offices and authorized partners actively engaged in the sales support system
- **Turnover growth:** Competitive parts turnover increased by 32.5% Year-to-Date (YTD) from 2020 to 2023

Dealer profitability improvement

Global Premium OEM

Client background & context

Initial challenges:

- The dealership network of the client is experiencing a low Return on Sales (RoS), which is negatively affecting overall profitability and operational efficiency

Objective:

- Enhance dealership profitability by conducting a thorough root cause analysis to identify key issues and implement targeted improvement initiatives that drive sustainable financial performance

Accenture's approach

Analysis and recommendations:

- Financial analysis using income statements and KPIs
- Identify improvement potential and select 1-2 focus areas (e.g., new car sales, used car sales, spare parts, service) with top management

Deep dive interviews:

- Perform in-depth interviews across all levels of the dealership organization (e.g., CEO to mechanic)
- Analyze additional data, such as individual sales numbers, to gain deeper insights into selected areas

Tailored improvement initiatives:

- Develop customized improvement initiatives addressing identified root causes and aligning with the dealership's organizational structure

Follow-up and monitoring:

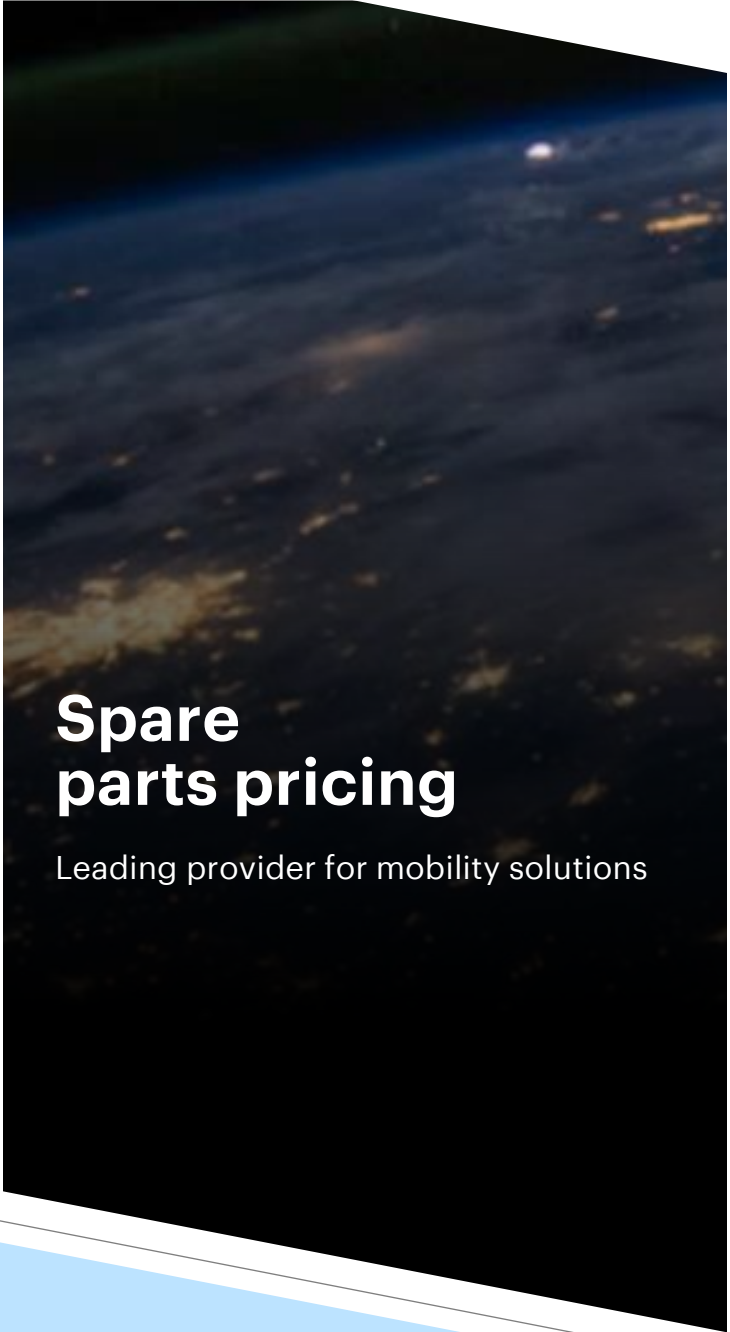

- Monitoring of progress and address any challenges
- Performance of a financial review to evaluate the impact of the implemented initiatives

Outcomes

• Impact on dealerships' bottom line:

- New car sales: Estimated improvement of 0.3 – 3.0 percentage points (pp) after 6 months
- Used car sales: Estimated improvement of 0.5 – 5.0pp after 6 months
- Aftermarket: Significant improvement of 6.0 – 22.8pp after 6 months
- Note: Results exclude potential non-project-related changes at the dealerships

- **Knowledge transfer:** Development of a dealership improvement handbook, capturing lessons learned and best practices for future initiatives

Spare parts pricing

Leading provider for mobility solutions

Client background & context

Initial Challenges:

- A global mobility company operating in 20+ countries, needed high-impact initiatives capable of delivering short-term returns
- Through a value targeting exercise, we identified their spare parts pricing was managed through multiple pricing models and local policies across geographies, creating inconsistencies, limited transparency, and material value leakage. The challenge was twofold: capture fast EBITDA uplift while building a repeatable and governable pricing approach across brands and markets

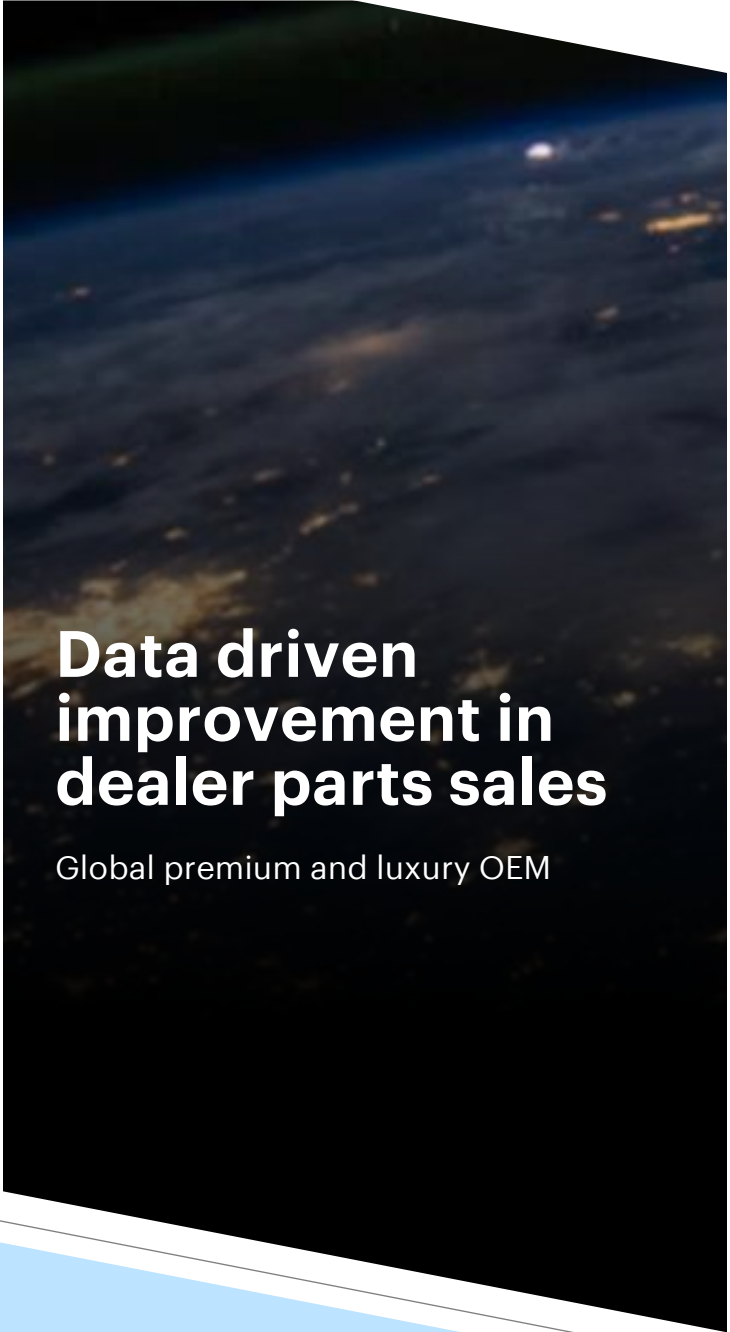

Accenture's approach

We launched a first phase to transform spare parts pricing across 14 brands in five European markets, combining standardization, analytics, and rapid activation:

- **Harmonized pricing logic** across selected markets to remove inconsistencies and reduce leakage
- **Scalable analytics and governance:** Standardized parts-family mapping to enable scalable analytics and sustainable pricing governance
- **Identified and activated quick wins** to drive near-term EBITDA impact
- **Simulated and implemented new price levels** at part and market level, ensuring feasibility and control
- Embedded **value realization tracking** to secure impact delivery and performance transparency
- Provided hands-on **adoption support** during the model transition to accelerate client ownership

Outcomes

- **Proven financial impact**
 - ~€0.8M incremental gross profit in 10 months
 - Client breakeven achieved in month 7
 - Capabilities built (beyond the uplift)
 - Increased pricing transparency and decision traceability
 - Stronger product management capabilities and pricing governance foundations
 - A scalable baseline to replicate the model across additional country-brand combinations

Data driven improvement in dealer parts sales

Global premium and luxury OEM

Client background & context

Initial challenges:

- The client faced the need to professionalize the parts trading business at dealerships to address gaps in performance and fully capitalize on opportunities within the supply chain
- Limited staff capabilities and a lack of a data-driven approach hindered the ability to achieve optimal sales performance and operational efficiency

Objective:

- The primary goal was to increase parts sales performance by enhancing dealership staff capabilities and fostering a more data-driven approach
- This included leveraging untapped business opportunities across the supply chain to drive growth and improve overall efficiency in parts trading operations

Accenture's approach

Performance analysis and decision-making:

- Conduct a thorough analysis of parts trading business performance to identify areas for improvement
- Support decision-making and action-taking based on insights

Certification program guidance:

- Guide dealers through the certification program to ensure alignment with professional standards

Coaching sessions:

- Execute on-site and remote coaching sessions for dealers using an innovative and pragmatic approach

Action plan implementation:

- Review and implement dedicated action plans focused on strategic measures and tactical business achievements

Outcomes

- **Enhanced business organization:** Improved the organization of dealers' business activities, leading to greater efficiency and effectiveness
- **Data-driven approach:** Increased adoption of a data-driven approach among dealers, enabling more informed decision-making
- **Immediate results:** Execution of pragmatic actions by dealers, resulting in measurable and immediate business outcomes and over 90% of dealers successfully achieved certification as "Parts Pro" affiliates, demonstrating professionalization and alignment with program standards

High-performance aftersales network operation management BI

Luxury OEM

Client background & context

Initial challenges:

- Reliance on manufacturer-issued target requirements and experience for aftersales business analysis and management
- Lack of data-driven analysis for individual dealers
- Inability to identify future potential of dealers
- Absence of personalized goals and tailored optimization methods

Objective:

- Implement HPMa (High-Performance Management Aftersales) as a new approach
- Build a management BI system to enable data-driven insights
- Support manufacturers, business units, regions, dealer groups, and dealers in improving aftersales performance
- Enable personalized goal-setting and optimization to unlock dealer growth potential

Accenture's approach

HPMA model design:

- Develop the HPMa model to define key performance indicators (KPIs) for the aftersales business in China

Management reports:

- Design tailored management reports for various perspectives and permission levels, including:
 - Manufacturer management
 - Business unit executive level
 - Region, dealer group, and individual dealer
- Reports include tools such as One Pager, League Table, DG Dashboard, RDA (Root Cause Analysis Toolbox), and Dealer Dashboard

Promotion and training:

- Conduct promotion and training sessions for manufacturers' business departments and regional teams to ensure effective adoption and implementation of the HPMa model

Outcomes

- **Enhanced transparency:** Improved transparency and timeliness in aftersales business management
- **Regional empowerment:** Enabled regions to better identify dealer potential, challenges, and future optimization directions
- **Dealer empowerment:** Supported dealer groups and individual dealers in monitoring their aftersales operations and understanding their ranking among similar stores, facilitating targeted improvements and optimizations.

Aftersales sales incentive planning and annual updates

Luxury OEM

Client background & context

Initial challenges:

- The clients Aftersales business contributes nearly half of the company's income but lacks a transparent and effective motivational framework
- Limited data analysis capabilities in the aftersales department hinder strategic goal decomposition, policy formulation, and distributor engagement

Objective:

- Build a transparent, data-driven framework to align strategy with execution
- Enhance data analysis capabilities to connect strategic goals, refine policies, and improve distributor collaboration
- Maximize profitability and drive motivation in the after-sales department

Accenture's approach

Analysis of influencing factors:

- Identify and clarify multiple factors impacting after-sales incentives
- Predict spare parts sales and estimate store achievement rates

Collaboration and definition:

- Definition of aftermarket products and services
- Develop pricing estimates, sales measurements, and store completion predictions to shape annual sales incentives

Dynamic policy adjustment:

- Adjust sales incentive policies based on actual business performance
- Implement timely changes, such as increased subsidies for spare parts sales during the epidemic
- Coordinate with headquarters to refine sales strategies

Outcomes

- **Strengthened customer process:** Improved the aftersales customer journey, including lead management, follow-up, appointments, store arrival, pre-inspection, workshop processes, and delivery
- **Increased customer retention:** Boosted customer retention rate in the maintenance business from 50% to 65%
- **Growth in accident maintenance:** Achieved an average annual increase of 12% in the output value of accident vehicle maintenance
- **Steady spare parts sales growth:** Spare parts sales grew consistently by over 10% annually

Optimizing Aftersales Online Services and rolling out Partslink24 to boost premium OEM parts sales

BMW C1-DE-A-20

Client background & context

Initial challenges:

- Increasing and aging car park, changing model mix, and decreasing service retention
- Growing demand for transparency and digitalization in the aftersales business
- Need to target Independent Service Providers (ISPs) whose customers are beyond the reach of premium OEM services

Objective:

- Boost OtC parts sales by providing ISPs with enhanced services, digital solutions, and competitive pricing
- Professionalize the online parts trading business through Partslink24, empowering branch offices and authorized premium OEM partners
- Offer comprehensive aftersales solutions (AOS), including diagnostics and programming, to strengthen ISP engagement and drive sales growth

Accenture's approach

Central coordination and steering:

- Develop coaching materials and conduct centralized trainings for ISPs and OEM partners
- Coordinate platform development with stakeholders and provide first-level support
- Execute online marketing campaigns via Partslink24

Local coordination and steering:

- Select and onboard dealers, followed by kick-offs
- Deliver in-house trainings and on-site coaching focused on mobile services for ISPs and Sales & Operation Excellence
- Track progress through monthly status and dealer visit reports

On-site coaching at the dealer:

- Focus on mobile service offerings for ISPs and Sales & Operation Excellence modules
- Organize in-house trainings
- Monitor progress through monthly status and dealer visit reports

Outcomes

- **Training impact:** Conducted 75 centralized AOS trainings for Independent Service Providers (ISPs) and premium OEM partners, and 15 in-house trainings for selected premium OEM partners (2019–2024) & trained 1,069 ISPs between 2019 and 2024
- **Online sales growth:** 45.5% of parts sold online via Partslink24 to ISPs by OEM branch offices in 2023
- **Network expansion:** Connected 477 premium OEM branch offices and partners to the platform
- **Turnover performance:** Achieved a 97.1% increase in turnover performance from 2016 to 2023

Professionalization of accident management and 1st level support for automated aftersales claims processing in the German market

BMW C1-DE-A-20

Client background & context

Initial challenges:

- Evolving customer expectations and diverse needs of business and private customers
- Competitive pressure from leasing companies, insurance providers, and new market entrants
- Limited user acceptance of the automated claims system due to insufficient training

Objective:

- Realign the product portfolio to regain market share
- Establish partnerships with leasing and insurance companies for active claims management
- Implement efficient 1st level support to improve user enablement and request handling

Accenture's approach

Product portfolio and marketing:

- Realign the product portfolio and execute targeted marketing campaigns with performance tracking

Cooperation models:

- Develop partnerships with leasing and insurance companies, create business cases, and standardize retail processes
- Support automated claims processing through system rollout

Reporting and hypercare:

- Establish reporting mechanisms and adapt approaches based on pilot evaluations
- Implement an end-to-end Hypercare concept, including AWS Connect Hotline, web sessions, and a knowledge database

Monitoring and use cases:

- Set up reporting and monitoring processes to ensure continuous improvement

Outcomes

- **System rollout & dealer enablement:** Automated claims processing enabled for ~5000 dealers while supporting 450+ dealers in the German market during rollout
- **Problem solving:** Weekly MS Teams sessions conducted for issue resolution
- **Knowledge database:** Built and expanded in Confluence
- **Reporting and integration:** Developed rollout tracking solutions and defined system requirements for BMW ProNET

Exemplary CVs

Note: Exemplary CVs

The following section contains indicative CVs of our key representatives, who are intended to serve as your primary points of contact. During the course of this proposal phase, we will mobilize additional profiles with the required skill sets (mechanics background, workshop experience, warranty process understanding, BMW vehicle systems knowledge, diagnostic skills, Audit software use etc.), subject to mutual agreement and resource availability. We also remain open to rehiring selected key resources from the current providers, where feasible.

The CVs of our employees presented in our offer are intended solely to provide an overview of the knowledge and experience available in our company. The decision on the number, selection, composition and structure of the actual project team lies solely with Accenture.

**Christopher
Richard**

Background

Christopher works in management consulting at Accenture with a focus on the automotive industry. He brings several years of experience from the automotive and supplier industries. Before joining Accenture in 2012, he worked in strategic marketing at an international automotive supplier on projects in Germany, Austria, Great Britain, and Switzerland. His experience includes marketing, organizational and business analysis, strategy development, process improvement, and project management.

Christopher Richard studied International Business Administration with a focus on Finance and Marketing at Baden-Württemberg Cooperative State University (DHBW) Mannheim.

Functional expertise

- Project Management
- Defect & Quality Management
- Six Sigma Green Belt
- Automotive mechanic
- State certified automotive technician
- Certified Technical Business Economist (IHK)
- SAP SCM/EWM

Industry expertise

- Automotive

Project experience (Extract)

BMW | Future Operations Customer Support

- Project management during the transition from strategy to implementation phase
- Spare parts strategy for the replacement of high-voltage batteries

BMW | ESO CRM

- Concept development for a new European CRM system that enables direct interaction with customers in direct sales

BMW | High Performance Management in Aftersales

- Development of a concept to increase the sales of parts and accessories in BMW markets and global performance reporting
- Consulting in Aftersales Management as Master Consultant for South Korea, Canada, Mexico, and Russia

BMW | RSPplus – Retail Sales Portal

- Rollout of the Retail Sales Portal in the German market, including training strategic partners and the dealer advisory board in the pilot phase

BMW | Motorrad Moonride Strategy Implementation

- Definition of global process standards for retail and development of a DMS strategy for retail based on a fit-gap analysis in G10 markets

International Tire Manufacturer | D, A, CH, GB Regions

- Developed a D-A-CH brand and product portfolio strategy
- Reorganized the marketing departments in D-A-CH to realize cross-border synergies

**Steven
Bernhardt**

Background

Steven works for Accenture in Munich in the field of System Integration with a focus on the automotive industry.

He has more than 10 years of experience in dealer network structures, CRM and Sales, as well as in the integration of systems in production logistics. His work focuses on the implementation and optimization of IT processes and the associated project management. He has experience in leading and managing large onshore and offshore teams.

Steven Bernhardt holds a Bachelor of Science in Business Information Systems, as well as an Honours Degree from the Open University in London. During his studies, he supported several companies in Switzerland and Germany on international projects while working for a service provider.

Functional expertise

- System integration
- Process & Requirements Management
- CRM
- Rollout-Management
- Project Management

Industry expertise

- Automotive / Mobility
- Motorcycle Industry
- Automotive Suppliers
- Energy Industry

Project experience (Extract)

BMW Group – RSPplus | Rollout in C1 / C2

- Overall responsibility for the rollout and Hypercare in the German market
- Design and implementation of the rollout approach and methodology toolkit
- Execution of data migration and rollout industrialization
- Development and execution of the as-is analysis and data cleansing approach
- Change management within the organization and the NSCs
- Hypercare and dealer enablement

BMW Group | CRM Services / Aftersales Serv. Provider

- Execution of end-to-end CRM campaigns at market level, including KPI reporting
- Process automation across multiple markets
- Implementation of a multi-channel aftersales campaign in the UK

Start-up Management

- System integration of truck control systems for BMW and MINI plants in the German and UK markets
- Execution of Hypercare during commissioning, including at the MINI Oxford (UK), BMW Dingolfing (DE), and BMW Leipzig (DE) plants
- System integration of requirements for the introduction of BMWi within an agile delivery approach
- Requirements analysis and translation into functional and technical concepts

Konsolidierungs- und Optimierungskonzept für die Applikationslandschaft in C1

- Structuring applications according to prime processes and business areas
- Requirements analysis and translation into conceptual designs
- Evaluation of all C1 wholesale and retail applications
- Identification of process optimization opportunities

**Philipp
Serwach**

Background

Philipp is a PPSM Associate Manager with +10 years experience in consulting and delivery roles. He is aligned to our Customer Insights & Growth Practice and is based in our Munich office.

Philipp is a seasoned account and business development expert and worked for different OEMs in the automotive industry. His work has a strong focus on the aftersales business with independent service providers (ISPs) and corporate customers (insurances and leasing providers).

He is experienced in classic methodologies and worked along the whole value chain from ideation and design to implementation and delivery at the client.

- Analysis and advisory for defining target support models (processes, responsibilities, governance)
- Mobilization of market teams across EU countries and ongoing supervision

**Sascha
Kruszek**

Background

Since 2011, Sascha has successfully accompanied and supported several projects in the field of research and development, primarily in testing and validation, on behalf of renowned OEMs in Germany and abroad as well as Tier 1 suppliers.

Thanks to his extensive experience in the automotive sector—gained through his training as an automotive mechatronics technician, his subsequent degree in automotive engineering, and his great enthusiasm for all things related to automobiles—Sascha can quickly familiarize himself with a wide range of topics in the automotive field. His current consulting focus is on method development, in particular Failure Mode and Effects Analysis (FMEA) and effect-chain analysis.

Functional expertise

- Quality Management & Risk Analysis
- Project & Process Management
- Facilitation and Workshop Leadership
- Advanced Knowledge in Vehicle Testing and Validation

Industry expertise

- Automotive

Project experience (Extract)

BMW | Application of Quality Management Methods with a Focus on FMEA

- Organization and execution of quality method applications such as FMEA, FTA, effect-chain analysis, Ishikawa
- Facilitation of workshops on quality work in development projects and process-related topics

BMW | Testing and Validation (R&D)

- Validation of type-approval-relevant powertrain components (SCR & HC emissions), including worldwide testing of prototype vehicles
- Validation of underbody clearance for complete vehicles, including independent component optimization and project management

OEM | Adaptation of E/E process landscape to requirements from UNECE R156

- Disciplinary responsibility for the field of RxSWIN management
- Customer support for process analysis and improvement

OEM | Trained automotive mechatronics technician at a car dealership

- In-depth knowledge of the technical specifications of various vehicle manufacturers (focus on passenger car technology), repairability, and good insight into warranty and goodwill processes
- Extensive knowledge of the product portfolio of German automotive groups in the passenger car segment
