1 General

1.1. Contact for inquiries at BMW

Please direct any queries regarding the tender documents to:

Name (Business department/ Purchasing department)	Abbreviation	E-Mail	Phone number
Esther-Madeleine Fink	CA-230	esther-madeleine.fink@bmw.de	+49-151-601-21478
Alexandru Dobre	CA-230	Alexandru.Dobre@bmw.com	+49-151-601-59908
Ekaterini Dragani	CA-230	Ekaterini.Dragani@bmw.de	+49-151-601-11543
Stefan Bermel	MG-141	stefan.bermel@bmw.de	+49-151-601-61920
Benjamin Brookman	MG-142	Benjamin.Brookman@bmw.de	+49-151-601-49897

1.2. Submission of a bid

According to the enquiry rounds in the Coupa

The offers are to be posted in Coupa by the specified end of the round in electronic form as well as signed in document-genuine form (scan of the offer).

1.3. Confidentiality Agreement

A prerequisite for any exchange of information is the prior acceptance of the BMW Confidentiality agreement. For requests via Coupa, the confidentiality agreement must be requested via the system.

1.4. Legal Bases

Case 1 (AVB/BVB):

The "BMW Group General Terms and Conditions for Indirect Purchasing (GTC)" valid at the time of conclusion of the contract shall apply to this assignment. These can be viewed in the BMW Group Partner Portal at the address <https://b2b.bmw.com> > Purchasing Conditions > Purchasing Indirect Material or will be sent on request.

The local GTC of each country / market is valid at the time of conclusion of the contract shall apply to this assignment. These can be viewed in the BMW Group Partner Portal at the address <https://b2b.bmw.com> > Purchasing Conditions > Purchasing Indirect Material or will be sent on

request.

In addition to the GTC, the applicable requirements at the time of the special contract conditions.

Special Terms and Conditions for the provision of Consultancy and Training Services (11/2018)

Acceptance of the above-mentioned contractual basis by the Contractor shall be a prerequisite for the commissioning. Any existing framework agreements between BMW and the Contractor or deviating contractual terms and conditions of the Contractor shall not apply. By submitting a binding offer, the Contractor accepts the contractual basis designated for this scope of the tender.

Any order confirmations subsequently sent to BMW which contradict or deviate from this Section 1.4 shall not become part of the contract.

The contractor checks and updates his data in the BMW GROUP PARTNER PORTAL (B2B) supplier database (Certifications, ISO, TISAX, Sustainability, DVIA Framework Contract Acceptance, Sales Figures, Characteristics, Services Portfolio (Commodities), Address and Locations...).

If a parts, component, control unit, etc. provided by BMW is to be disposed of in agreement with the BMW business department, the BMW business department must give its approval (or BMW will dispose of the part itself). If a BMW release for disposal is available, then the third-party supplier shall assure BMW that the parts, components, control unit, etc. will be destroyed and recycled. The supplier and the certified waste management company must provide written and signed proof of the destruction of the part... (Part number...) to the BMW business department, together with a picture of the destroyed part. In the case of several parts, a disposal list with corresponding picture evidence is also possible.

Data privacy

If this has not yet been done, the supplier agrees to accept the current version of the DVIA (“data processing on behalf”) framework agreement (including attachments). The current version of the framework agreement can be viewed and accepted via the BMW Group Partner Portal (<https://b2b.bmw.com> Maintain Supplier Data application). The supplier thus undertakes to ensure that the processing and use of personal data takes place exclusively in a member state of the European Union (EU) or another state party to the European Economic Area (EEA). Any transfer of personal data to a third country is subject to the prior written consent of BMW. The requirements of Chapter V of the GDPR must also be met. If data processing takes place from a third country (including remote access from the third country), the third-party provider will provide BMW with appropriate support. This means, for example, active support in identifying and implementing appropriate protective measures and providing relevant information. In order to determine this order-specific information regarding the type, duration and scope of the data to be processed as well as technical, contractual and geographical information about the processing itself, the supplier receives access to the “DVIA Suite” tool and the digital questionnaires contained therein. The deliverant receives access to the DVIA Suite via a link, which

is sent to him in a separate email. The supplier continues to guarantee that it will answer the questions contained therein truthfully and to the best of its knowledge and belief. A final assignment can only be made as soon as the above-mentioned DVIA questionnaires have been completed in full, digitally accepted and signed.

DVIA result: “relevant”

Each business partner on NSC-level (markets) and AG-level (CA-23/0-specific tickets) is responsible for having the respective documents in place e.g. PIA.

2 Scope of Tenders

2.1. Subject of the scope of the award:

BMW's Independent Aftermarket (IAM) business aims to exploit the substantial potential of the Independent Aftermarket by commercializing Original BMW Parts and Original MINI Parts to a wide range of Aftermarket customers. The main activities comprise supporting and establishing successful business relationships between authorized BMW dealers and the Independent Aftermarket customers.

To further professionalize our IAM business and cope with the changing market and competitive environment, BMW is developing and supporting the roll-out of IAM specific sales & marketing tools, concepts and processes at our National Sales Companies (NSCs) and within the authorized distribution network.

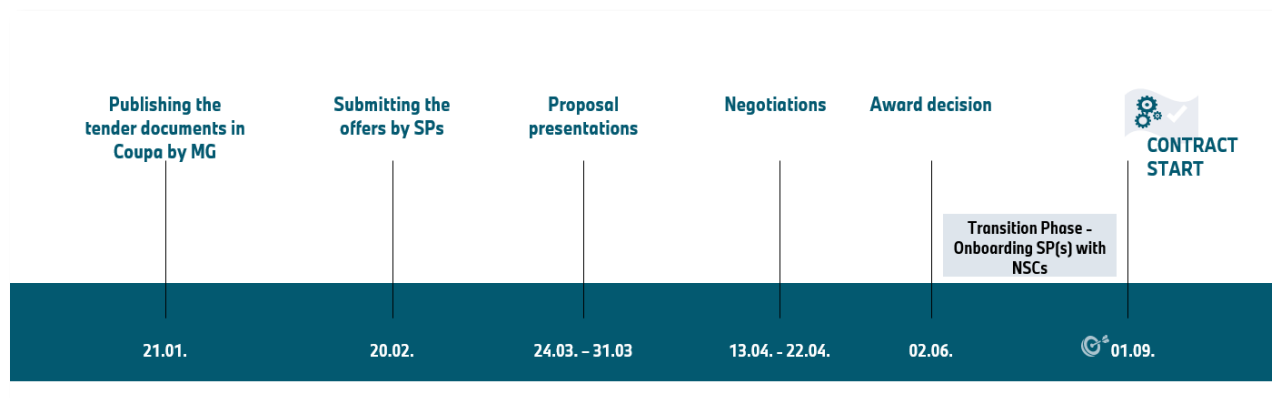

For this BMW is in search of Service Providers with strong IAM sales credentials as well as a proven IAM track record. Those will develop the BMW IAM business in selected markets by supporting the BMW NSCs in setting up and operating sales as well as sales supporting activities. The Service Providers' activities will comprise five clusters, which are described in detail in chapter 2.2.

1. Analysis
2. Planning
3. Development
4. Success Management
5. Collision (TLA: Total Loss Avoidance exclusively for C3-AU)

Start: **2026.09.01**

End: **2030.12.30**

Onboarding begins approx. three months prior.

Timeline/Milestones:

2.2. Specification/Performance Catalogue: Listing of the work packages

Overview:

As this tender is considered an international tender leading into a global framework agreement with BMW, the selected Service Provider will operate its activities in selected markets.

This global framework agreement is composed of four regional clusters. Each cluster represents one sales region consisting of selected markets.

Prerequisite: The service provider can offer and fulfill the services on a regional level (C1, C3, C4, C5).

The four regional clusters are as follows:

- C1: Europe
- C3: Asia Pacific and South Africa
- C4: Canada
- C5: China

The respective markets are listed in the attachment “Matrix_Regions_Markets”

Each Service Provider is requested to clearly state for which region (C1, C3, C4, C5 or all regions) the application is valid. Therefore each applicant is requested to fill in the region activity matrix (refer to appendix 01).

The matrix includes the current regions, including the integrated markets (NSCs). At the start of the onboarding phase (June, 2026), the Service Provider is capable to fulfill the full extent

of all services (work packages incl. all services/tickets) including the respective national language to the single BMW NSCs within one region (C1, C3, C4, C5).

All applicants are eligible to apply for multiple regions if the respective national language is offered in the respective markets. If this is not guaranteed at the time the tender begins, the service provider will provide a structure-plan together with the offer to BMW AG (upload in Coupa).

Please fill in in the attachment “Matrix_Regions_Markets” by providing the following information:

- (1) Select the regions (C1, C3, C4, C5) you apply for.
- (2) Select “yes/no” in column “native speaking representative”.
- (3) If the service provider does not yet have a native speaker in a market, the planned implementation date must be inserted in column “native speaking representative will be established until (date)”.

Overview Tickets:

The results of all following tickets are aligned, shared with and approved by the NSC in an agreed content, time frame, deadline and format incl. IT-tools.

(1) Market segmentation.

Analyse IAM potential.

Deliverable: BMW market share is calculated and finalized and recommendation on which car park segments to focus on. The results are shared with and approved by the NSC in an agreed time frame and format.

Develops a data-driven understanding of IAM potential across the defined area by performing comprehensive market segmentation and BMW market-share analysis. The utilization of the market segmentation is to identify the most attractive car park segments to target with IAM offerings and to formulate a prioritized focus area for the NSC. The deliverables will include a segmentation model, a BMW market-share assessment per parts category, and a strategic recommendation on which car park segments to concentrate IAM efforts and resources on. All outputs will be produced with consistent methodology, governed by the NSC's format and timing requirements, and will be reviewed and approved by the NSC within the agreed timeline.

Scope:

- Annual determination of potential for the third-party workshop business at market, sales, area, owner and dealer level (all car brands) down to part categories.
- Data gathering and harmonization: Compile market data on vehicle age, model mix, service needs, and historical IAM performance; align data with the NSC standards.

- Segmentation methodology: Develop a robust segmenting scheme (e.g., by vehicle age segments 1-4, maintenance profiles, service frequency, loyalty patterns) and validate with market data.
- Market share analysis: Calculate current and projected BMW/MINI market share within each segment; assess potential growth opportunities and risk factors.
- Governance and presentation: Prepare a concise, NSC-approved report and a slide deck in the agreed format; secure NSC sign-off within the timeline.

Measurement and Acceptance Criteria:

- Completeness and quality: All required data sources integrated; segmentation definitions approved by NSC.
- Model validity: Segmentation model tested for stability and relevance; alignment between segments and IAM opportunities.
- Output quality: Deliverables (segmentation report, market-share analysis, focus recommendations) delivered in the agreed NSC format and within the defined timeline.
- NSC approval: Final segmentation and focus recommendations approved by NSC within the specified time frame.

(2) Customer segmentation (IRs and Garage Chains).

Analyse customer groups (IRs and Garage Chains).

Deliverable: ABC clustering and ranking of customers (IRs and Garage Chains) on market- and county-level is finalized and shared with and approved by the NSC in an agreed time frame and format.

Deliver a market-specific analysis of Independent Repairers (IRs) and Garage Chains, focusing on their potential and strategic value. Provide ABC clustering and ranking by, with an aggregated NSC-approved report that enables local use and further measures and/or analysis.

Scope:

- Collect and harmonize IR and garage chain data.
- Apply ABC clustering based on spend, growth potential, and strategic importance.
- Produce a concise ranking per cluster and market/region.
- Deliver an aggregated report and a market-ready dataset for local use.

Measurement & Acceptance Criteria:

- Data completeness: Core IR/garage chain attributes present for that respective market.
- Clustering validity: Clear separation between ABC clusters with meaningful differences (e.g.: A – regular buyer, B – occasional buyer, C – dormant, no purchase in the last 6 months).
- NSC alignment: Aggregated report approved within the agreed timeline.

Usability: Dataset exportable (Excel) for local market use and ongoing updates.

(3) Business field analysis.

Analyses workshop, parts sales and IRs (sales, VAK, DB, bonus, VKU, etc). Development retroactively three years.

Deliverable: Business analysis is finalized.

Analyses workshop, parts sales and IRs (sales, VAK, DB, bonus, VKU, etc). Development retroactively three years.

(4) Dealer analysis (authorized BMW Dealers).

Analyse BMW authorized dealer business with 4th-level (IRs).

Deliverable: Business analysis with 4th-level (IRs) is finalized. The results are shared with and approved by the NSC in an agreed time frame and format.

The service provider will analyze BMW dealer performance using NSC-provided data. The analysis will evaluate each dealer's performance, benchmark against other dealers, and compare against the local IAM potential. It will identify gaps by part family and code (i.e., missing sales by part and family) to spotlight growth opportunities.

Scope:

- Data provision and governance: NSC supplies standardized dealer performance data and car park data, including sales by part family and part code.
- Benchmarking: Compare each dealer's performance to peers and to the market baseline, with regional normalization as needed.
- Gap analysis: Identify missing sales by part family and code, highlighting opportunities to close performance gaps.
- Reporting: Produce an executive summary, per-dealer performance dashboards, and a detailed gap report suitable for NSC review.

Deliverables:

- Dealer Performance Report (per dealer, with KPI benchmarks and variance vs. peers).
- Car Park Benchmark (overall market vs. dealer performance).
- Gap Analysis by Part Family/Code (with quantified revenue leakage).
- Executive Summary for NSC (key insights, growth opportunities, recommended actions).
- Data quality assessment and data lineage documentation.

Measurement & Acceptance Criteria:

- Data completeness: All required fields present for each dealer and car park segment (target: 100% completeness).
- Benchmark validity: Reasonable cross-dealer variance and stable rankings across periods.
- Gap accuracy: Identified gaps align with observed purchasing patterns and price/margin data.

- Usability: Deliverables provided in NSC-approved formats (Excel dashboards; accompanying narrative).

(5) Sales channel analysis.

Analyze sales channel online business on dealer-level (authorized BMW dealer) and customer-level (IRs and Garage Chains) via PartsLink24.

In addition to PL24, other marketing systems / online marketplaces (such as ALFAH Parts Web, Euro master, Tire 24) must be analyzed and, in coordination with the business department, an opportunity and risk assessment with downstream piloting and synchronization with PL24 / DMS implemented.

Deliverable: Sales channel analysis is finalized, and potentials are identified. The results are shared with and approved by the NSC in an agreed time frame and format.

Scope

- Conduct a detailed sales channel analysis (online vs. offline) focusing on authorized BMW dealers.
- Deliver a validated specification in collaboration with internal stakeholders.
- Ensure NSC approval of findings, in an agreed format and timeframe, to inform market strategies and channel optimization.

Analysis & Data Collection

- Gather dealer-level data across online and offline channels: volumes, conversion rates, price realization, promotions, and channel mix.
- Segmentation: dealer type, region, size, and online/offline performance.
- Benchmarking: compare against internal targets and external best practices.

Methodology & Specification

- Define analysis methodology, KPIs, data sources, and reporting format.
- Produce a formal specification document with alignment and sign-off from relevant stakeholders.

NSC Review & Approval

- Prepare executive summary, methodology, key findings, risks, and recommended actions.
- Obtain NSC approval within the agreed timeframe and format.

Deliverables

- Final Sales Channel Analysis report (national/dealer-level, online vs. offline).
- NSC approval note including any required actions or next steps.
- Executive summary deck for management and stakeholders.

(6) Product portfolio analysis.

Analyze the product portfolio on family code-level, categories and car models.

Deliverable: Product portfolio analysis is finalized. The results are shared with and approved by the NSC in an agreed time frame and format.

Analyze the product portfolio at the family code level, by categories, and by car models, ensuring correspondence with the market's car park. The objective is to determine whether the dealer or market has the right product strategy at the model code, family code, part number level and to finalize a NSC-approved analysis that anchors the portfolio to the local fleet.

Scope:

- Data gathering and alignment: Collect portfolio data (family codes part numbers, categories, model code mappings) and harmonize with the local car park.
- Portfolio analysis: Evaluate coverage, mix, and gaps across family codes, categories, and model range.
- Strategy anchoring: Assess whether the current product strategy matches the market's car park composition and maintenance needs.
- Output and governance: Deliver a NSC-approved analysis in the agreed time frame and format; provide supporting annexes and data mappings.

Measurement & Acceptance Criteria:

- Completeness: Portfolio data covers all required family codes, categories, and models for the market.
- Alignment: Portfolio aligns with the market's car park as evidenced by mapping and coverage metrics (target: high alignment across segments).
- NSC approval: Final portfolio analysis approved by NSC within the defined timeline and format (Excel dashboards).

(7) Creation of a key figure set.

Creation of a key figure system which contains all data relevant to the business area, both from the financial area, as well as measurable quality characteristics of all BMW / MINI partners as well as branches for business area management.

These include:

Financial level: E.g.: sales, forecast, contribution margin, target achievement, potential for business with third-party workshops per parts/accessories category (maintenance, accident, etc.).

Qualitative level: E.g.: training status of all HO/SO and NL companies and their FW customers, target/actual comparison of marketing campaigns, online system usage, etc.

Deliverable: Creation of a set of key figures (financial level and qualitative level) including revision of the CI is finalized.

BMW / MINI - Creation of a set of key figures (different viewing rights for e.g. C1-

DE-A, MKS and HO/SO/NL) and integration into the BMW C1-DEAdvanced Analytics Tool as a separate dashboard for the third-party workshop business area. Financial & qualitative components.

Analyzes as maps (geographic information system GIS) if necessary, integration into FW dashboard.

(8) Logistics strategy.

Conception of regional logistics solutions within market/county for authorized BMW dealers to deliver goods to independent workshops to increase cost efficiency, including creation of a template for a business case (e.g. costs of vehicle, driver) for the dealer.

Deliverable: Logistical concept including a one-off business case template has been finalized and approved by NSC.

It must be ensured that all PSP companies offer FW logistics that are appropriate to the size of the company. As part of a logistics consultation, individual logistics models must be derived from sales and potential using logistics cost calculators and presented on site. Ideally, the market is explored together with the contractual partner regarding logistics cooperation (with VW, Daimler, etc.), appointments are coordinated with possible cooperation partners and a tendering process is carried out.

For this purpose, the following documents must be created and offered in coordination with the HO/SO/NL department: e.g. Requirements specification/needs analysis.

(9) Parts Basket Pricing.

Develop and implement, in alignment with the NSC and internal pricing department on AG-level (CA-25), pricing studies and optimization for the Parts Basket to ensure market competitiveness. Collect data-driven benchmarking, scenario analysis, and governance across the country region.

Deliverable: Pricing study is confirmed by the NSC and pricing measures are implemented under the local parts basket. The results are shared with and approved by the NSC and AG in an agreed time frame and format. Local prices are analysed with CA-25.

The scope of this working package is to develop and implement a comprehensive pricing strategy for the BMW Parts Basket (e.g.: 5,000–6,000 parts number), ensuring market competitiveness through data-driven benchmarking, scenario analysis, and alignment with NSC and CA-25 governance. The goal is to maximize sales and profitability while maintaining strategic pricing initiative across national and regional markets.

Deliverables:

Benchmarking & Data Collection.

- Conduct national and regional benchmarking of BMW parts against similar OES parts OES.
- Compare prices per part number and family code to identify pricing gaps.
- Collect and structure data from internal systems, market sources, and competitor channels.

Pricing Study & Scenario Analysis

- Develop pricing studies in alignment with NSC and CA-25.
- Perform scenario simulations to assess impact of price changes on volume, and competitiveness.
- Include elasticity modeling and historical performance trends.

Governance & Alignment

- Ensure pricing study is reviewed and confirmed by NSC.
- Collaborate with NSC, CA-230 and CA-25 to validate local price structures and strategic alignment.
- Share results with NSC and AG in agreed format and timeline.

Implementation & Monitoring

- Propose gradual price adaptations to NSC based on benchmarking insights.
- Implement approved pricing measures under the local parts basket.
- Monitor performance post-implementation and adjust strategy as needed.

Measurement & Acceptance Criteria

- Coverage: $\geq 95\%$ of parts basket analyzed and benchmarked
- Accuracy: $\leq 2\%$ deviation in price gap calculations
- Timeline: All deliverables submitted within agreed milestones
- Approval: Pricing study and measures confirmed by NSC and AG

(10) Business planning (e.g. marketing activities, campaign management, bonus schemes).

Define trade measures (e.g. BMW Toolbox, events, conferences, bonus schemes). Measures are selected which fit the best to the overall market strategy (market, customer, dealer, sales channel, product). The results are shared with and approved by the NSC in an agreed time frame and format.

Define and implement trade measures that align with the overall market strategy (market, customer, dealer, sales channel, product). Select and design marketing activities, campaigns, events, and bonus schemes that drive measurable business impact, and obtain NSC approval within the agreed format and timeline.

Deliverable: Measures are selected which fit the best to the overall market strategy (market, customer, dealer, sales channel, product). The results are shared with and approved by the NSC in an agreed time frame and format.

- Develop a coherent set of market-wide trade measures (BMW Toolbox, events,

conferences, bonus schemes) aligned to the market strategy.

- Map measures to four dimensions: market, customer, dealer, sales channel, and product.
- Create a practical implementation plan, including governance, responsibilities, and roll-out sequencing.
- Produce a standardized reporting pack for NSC review.

Deliverables

- IAM (Trade) Measures Portfolio (list of proposed measures with rationale and alignment to market strategy)
- Benefit description (how each measure supports market, customer, dealer).
- Implementation Plan (phasing, owners, dependencies, risk mitigation)
- Measurement logic (KPI set, targets, data sources, and reporting cadence)
- NSC Submission Package (formatted brief for NSC, including annexes with data mappings)

KPIs and Measurement

- Market impact: incremental turnover attributable to implemented measures (target: +X% over baseline within 12 months).
- Campaign performance: lift in awareness and engagement (target: Y% lift in targeted segments; Z% increase in qualified leads)
- Dealer engagement: number of dealers participating in campaigns and bonus schemes (target: ≥N dealers per quarter)
- ROI/Cost Efficiency: marketing spend per incremental unit sold (target: target ROI threshold)
- Compliance: on-time NSC approvals and adherence to BMW AG, CA-230 framework (target: 100% on-time approvals)
- Approvals: NSC final sign-off on the NSC Submission Package.

(11) Project planning.

Define Roadmap/Timeline/Milestones. Campaign planning/action plan/project plan is finalized. The results are shared with and approved by the NSC in an agreed time frame and format.

Deliverable: Campaign planning/action plan/project plan is finalized. The results are shared with and approved by the NSC in an agreed time frame and format.

Focus parts campaign & lost sales analysis: Conceptual development and implementation of the focus parts campaign. As part of this campaign to market parts that are at high risk of competition, parts baskets must be created in coordination with the department. Develop price proposals, evaluate opportunities/risks, derive downstream compensation processes and prepare key performance indicators. The shopping carts must be evaluated, adjusted if necessary and made available to the contractual partners.

Develop and follow various national Campaign/Action/Project Plan outlining the timeline, milestones, and dependencies, and secure NSC approval within the

agreed format and timeframe.

Scope

- Develop an integrated roadmap aligning campaigns, actions, and projects with market strategy.
- Define milestones, dependencies, resource needs, and risk mitigations.
- Produce a unified plan suitable for NSC review.

Deliverables

- Master Project Plan (roadmap, milestones, owners, dependencies)
- Detailed Campaign/Project Timetable (like schedule)
- Risk mitigation
- Resource overview
- NSC Submission Package (summary + annexes)

Measurement & Acceptance Criteria

- Completeness: All topics covered (campaigns, projects, milestones, owners, timelines).
- Clarity: Timeline and responsibilities clearly defined and traceable.
- NSC Alignment: Plan approved by NSC within the agreed timeline and format.
- Usability: Plan usable for local markets with exportable appendices (Excel/PDF/PPTX).

(12) Calculation of Business case.

Calculate costs for measures to be implemented. B

Deliverable: business case is calculated and finalized. The results are shared with and approved by the NSC in an agreed time frame and format.

Lost Sales Analysis (PL24 / AOS): as part of an international project, reporting for lost sales analysis is to be developed. For this purpose, in coordination with the system owners, the systems must be enabled to such an extent that a statement can be made in the future regarding: vehicle age, parts requirements, model series and lost sales. The system information must be prepared for management and measures must be derived to achieve goals.

Develop and finalize a comprehensive business case for proposed measures, including cost estimates and anticipated financial impact, and secure NSC approval within the agreed format and timeframe.

Scope

- Cost estimation: Calculate all direct and indirect costs for proposed measures (capex, opex, implementation, training, and ongoing support).
- Benefit forecast: Quantify expected revenue uplift, efficiency gains, and other financial benefits (e.g., increased turnover, margin improvements, cost savings).

- Sensitivity analysis: Assess key assumptions under different scenarios (best/worst/base cases).
- Documentation: Prepare a structured business case document and supporting annexes in NSC-approved templates.

Deliverables

- Detailed Cost Model (capex/opex, one-time vs. recurring costs)
- Benefit Realization Projection (revenue uplift, cost savings, ROI)
- Sensitivity & Scenario Analysis
- Executive Summary & Key Assumptions
- NSC Submission Package (formatted for NSC review, with annexes)

Measurement & Acceptance Criteria

- Completeness: All cost elements and benefits captured; assumptions disclosed.
- Rigor: Analytical methodology transparent; sources and calculations auditable.
- NSC Alignment: Business case approved within the agreed timeline and format.
- Usability: Deliverables suitable for NSC review and local market adaptation.
- Approvals: NSC final sign-off

(13) Dealer visit. (authorized BMW dealer).

IAM performance review, evaluation of the product portfolio, and assessment of training needs to close skill gaps and drive improvement.

Deliverable: Visit report is filled-out and uploaded in the local BMW tool (NSC-level). The results are shared with and approved by the NSC in an agreed time frame and format.

Incl. Expert circles (C1-DE):

Three expert groups, each lasting 3 days, take place every year. These must be prepared and carried out together with the department. It is important that the trade employees are present as part of the expert exchange on the topics of pricing policy, service strategy, distribution strategy and communication strategy.

A structured regular dealer visit program conducted by IAM service providers to boost dealer performance, close skill gaps, and raise awareness of IAM business and related technical tools (e.g.: Online Sales, PL24, AOS). Each visit combines a performance review, product portfolio evaluation, and training needs assessment, with a focus on practical outcomes that improve turnover and efficiency. All findings and actions are documented in a comprehensive dealer report and uploaded to the NSC portal for approval and archival.

Scope:

- On-site or regular physical visits to authorized BMW dealers
- IAM performance review: assess dealer IAM activity, turnover related to IAM parts, and adherence to processes
- Product portfolio evaluation: review coverage by family codes, categories, and models; identify gaps and opportunities
- Training needs assessment: identify knowledge gaps and training requirements; aligned with the NSC training guideline.
- Reporting: produce a comprehensive dealer report capturing findings, actions, and outcomes; upload to NSC portal

Deliverables (Dealer Report Overview):

- Executive Summary: highest-level findings, opportunities, and next steps
- Performance Review: KPIs, baseline vs. current performance, trend analysis
- Portfolio Assessment: coverage by family code, model mix, and recommended adjustments
- Training Gap Analysis: identified gaps, proposed training plan, and target completion dates
- Action Plan: concrete, assignable actions with owners and deadlines
- Annexes: data tables, supporting calculations, and methodology notes
- Upload: finalized dealer report, with purpose achievement and NSC-aligned formatting, uploaded to the NSC portal

Measurement & Acceptance Criteria:

- Completeness: All required sections populated; data sources traceable
- Relevance: Recommendations aligned with dealer fleet and IAM strategy
- NSC Alignment: Dealer report approved by NSC within the agreed timeline and format
- Traceability: Documentation includes data sources, assumptions, and calculation methods
- Availability: Report accessible in the NSC portal and ready for governance review
- Approvals: NSC final sign-off on the dealer report

(14) Dealer assessment. (authorized BMW Dealer)

Assess BMW dealer Network onsite according to the BMW IAM Principles. Elaborate after each visit an action plan for each dealer.

Deliverable: Health check (e.g., principles, audits) and action plan is finalized, and data is uploaded in the local BMW system (NSC-Level). The results are shared with and approved by the NSC in an agreed time frame and format.

Assess the BMW dealer network onsite against IAM Principles, and develop improvement plans for each dealer. This package is meant to cover extended health checks and comprehensive audits, with a detailed implementation plan to address identified gaps. The deliverables include an audit report and a health-

check/assessment report, both uploaded to the local BMW system (NSC level) and reviewed by NSC within the agreed time frame and format.

Scope:

- Onsite dealer assessment against IAM Principles in the alignment with the NSC (and CA-230 depending on the contexts)
- Comprehensive health check and/or audit for major elements (e.g., complete health evaluation, principles implementation, assessment findings)
- Post-visit action planning: develop dealer-specific improvement plans with the dealer principle, milestones, and success criteria
- Data handling: interactions and results documented and uploaded to the local BMW system (NSC level)

Possible deliverables:

- Health Check & Audit Protocol (scope, criteria, and methodology)
- Dealer Assessment Report (findings by dealer, scorecards, and gaps)
- Improvement Plan Template (actions, owners, due dates, success metrics)
- Executive Summary & Key Recommendations
- NSC Submission & Data Upload Proof (format and checklist)

Measurement & Acceptance Criteria:

- Completeness: All major elements (health check, audit, and improvement plan) documented for each assessed dealer.
- Quality: Assessments reflect robust, evidence-based findings; alignment with IAM principles and CA-230 standards.
- NSC Alignment: Final health check/audit reports and improvement plans approved by NSC within the agreed timeline and format.
- Usability: Outputs are suitable for local market use and NSC governance, with accompanying data dictionaries and source references.
- Traceability: Clear audit trail for data sources, assessments, and decisions.
- Approvals: NSC final sign-off on reports and improvement plans.

(15) Dealer coaching. (authorized BMW Dealer)

Perform dealer coaching program for:

- New BMW dealers in the network and/or new in the Program.
- BMW Dealers which failed an audit (to improve certain qualitative and quantitative performance).
- Principles Coaching.

Deliverable: Dealer coaching has been performed on site and action plan (incl timeline) has been submitted to the NSC.

The scope is to implement a dealer coaching program targeting:

- new BMW dealers entering the network or the IAM Program,
- dealers that have failed audits, to raise both qualitative and quantitative performance

- Principles coaching to embed key BMW IAM practices.

Measurement Criteria:

- On-site Coaching Completion: Coaching sessions conducted on-site with documented attendance.
- Action Plan Submission: A dealer-specific action plan, including timelines and responsibilities, submitted to the NSC.

Deliverables:

- On-site coaching report per dealer
- Dealer improvement plan with milestones
- NSC submission package including action plans and timelines

(16) Individual dealer coaching (authorized BMW dealer).

Conception of individual dealer development plans for selected authorized BMW dealers with a focus on: customer structure, pricing, potential, ordering process (online systems), communication and field service. Coordination of monthly target agreements (specified by NSC) with the authorized BMW dealer and monthly reporting to the NSC.

Deliverable: Individual dealer development plan has been created and the results have been reported to the NSC.

Individual dealer development plan (no field force): As part of dealer development, focus partners must be coached on site. The focus is on the following areas: customer structure, pricing, potential, ordering channel (online systems), communication and field service. The BMW project management is responsible for selecting the focus companies. It can be assumed that at least 10 focus companies need to be coached every year. Target agreements (ZV) must be made with the contractual partners in advance. These define the scope of the coaching (quantitative and qualitative goals). The achievement of goals must be checked monthly and made available to the department in a prepared form. Depending on the nature of the coaching process, it may also be necessary to visit FW to introduce online systems and services.

Prepare and maintain approx. 12 individual target agreements and, if necessary, present the modules on site and implement them together with HO / SO / NL. Monthly prepared reports to the department.

(17) Customer visit (IRs, Garage Chains).

Visit the customers (IRs, Garage Chain) to strengthen customer relationship between customer (IRs/Garage Chain) and dealer (authorized BMW dealer), to boost product awareness, offer hands-on systems support, and train on essential tools like online ordering, PL24, and AOS.

Deliverable: Visit report is filled out and data is uploaded in the local BMW tool

(NSC-level). The results are shared with and approved by the NSC in an agreed time frame and format.

The service provider will conduct on-site visits to Independent Repairers (IRs) and Garage Chains on behalf of the NSC to **raise product awareness, provide hands-on systems support, and train on essential tools** (online ordering, PL24, AOS). Each visit results in a structured visit report, data upload to the Service Provider and/or BMW NSC system, and NSC-approved outcomes.

Scope

- Targeted entities: Independent Repairers (IRs) and Garage Chains within the market.
- Visit objectives: **elevate product awareness, deliver hands-on systems support, and train on online ordering, PL24, and AOS.**
- Reporting: **standardized visit reports with data uploads to the local BMW NSC system.**
- Governance: NSC review and approval of visit outputs and derived actions.

Deliverables

- **Visit Plan and Schedule (mapping markets, IRs, and garage chains)**
- **On-Site Visit Reports (per visit, including attendees, topics covered, and outcomes)**
- **Action Plans and Timelines.**
- **Training & Systems Support Records** (training materials delivered, attendance lists, and tool usage evidence)

Measurement & KPIs

- Visit Coverage
- Target: X visits per IR/garage chain per quarter (in alignment with the NSC plan)
- Acceptance: ≥100% of planned visits completed per quarter
- Visit Quality
 - Target: 100% visits with a clearly defined objective (product awareness, system support, training)
 - Acceptance: objective achieved score ≥4/5 per visit (assigned by NSC reviewer)
- Training & System Adoption
 - KPI: Training uptake rate (percentage of attendees completing training modules: online ordering, PL24, AOS)
 - Target: ≥80% training completion.

Acceptance Criteria

- Data integrity: Visit reports and attachments are complete, legible, and auditable.
- NSC alignment: All templates are agreed with the per NSC templates and approved within the defined time frame.

- Usability: Local NSC team can access the reports and act on the uploaded data without dependence on centralized processing.
- Approvals: NSC final sign-off on visit reports and action plans.

(18) Customer assessment (IRs, Garage Chains).

Assess the new and/or existing customer (IRs/Garage Chain) onsite based on the health check (e.g. principles) and elaborate an action plan.

Deliverable: Health check (e.g. principles) and action plan is finalized and data is uploaded in the local BMW system (NSC-Level). The results are shared with and approved by the NSC in an agreed time frame and format.

Assessment of new and existing customers (Independent Repairers and Garage Chains) to evaluate turnover potential, and to develop an action plan. The NSC will review and approve the turnover-based health-check outcomes and improvement plan within the agreed time frame and format. The NSC may request assessments of high-potential independent repairers or garage chains; visits and related assessments can be planned and procured as needed.

Deliverables:

- Turnover-Potential Assessment Report per customer (potential estimation, risk/benefit, indicators and potential investments).
- NSC Submission Package (summary, annexes, and data mappings).
- Data Upload Pack (NSC-format data for NSC review).

Measurement & Acceptance Criteria:

- Turnover Potential: Turnover potential estimates exist for each assessed customer.
- Quality: Assessments reflect robust turnover modeling and market data alignment.
- NSC Alignment: Final reports and plans approved by NSC within the agreed timeframe and format
- Traceability: Clear documentation of data sources, assessment criteria, and decisions
- Approvals: NSC final sign-off on reports.

(19) Bonus concept.

Develop an IAM bonus concept to incentivize the BMW dealer for the IAM growth.

Deliverable: Concept and management summary for approval are finalized and provided to and approved by the NSC.

Develop a performance-based bonus concept to incentivize BMW dealers for IAM growth. The NSC may request the service provider's support to design and

implement a dealer remuneration framework that rewards both qualitative improvements (e.g., implementation of standards) and quantitative outcomes (e.g., incremental IAM turnover). The concept will be tailored exclusively to the IAM business for BMW dealers and approved by the NSC.

- Define bonus architecture: separate streams for qualitative and quantitative outcomes (e.g., standard implementation, process maturation, turnover up-lift).
- Criteria & thresholds: establish clear, market-appropriate KPIs, targets, and gating rules.
- Payment logic: determine payout logic (milestones, frequency, caps, claw-backs where applicable).
- Governance and approvals: ensure alignment with NSC.

Deliverables:

- Bonus Framework Document (structure, criteria, weights, payout rules)
- KPI Catalog & Target Matrix (qualitative and quantitative KPIs with definitions and data sources).
- Payment Schedule & Controls (timelines, approval steps, audit trails)
- NSC Submission Package (summary, rationale, annexes)

Measurement & Acceptance Criteria:

- Clarity: Bonus criteria are clearly defined, measurable, and auditable.
- Alignment: Framework aligns with IAM strategy and CA-251/CA-230 standards.
- NSC Approval: Bonus concept is approved by NSC within the agreed timeframe.
- Practicality: The design is implementable within the dealer network and compliant with governance.
- Transparency: Documentation includes data sources, calculation methods, and governance steps.

Governance:

- Owner: NSC/Market IAM Lead
- Review: NSC Finance & Compliance
- Approvals: NSC final sign-off

(20) Incentive.

Conception, organization and implementation of incentives to loyalty external workshops.

Deliverable: Incentive is conceptualized, organized, implemented and data recorded in BMW internal systems.

The aim of the FW incentive is to ensure that particularly outstanding companies, together with their best customers, are loyal to and motivated for the FW business area. The incentive is to be designed over six event weekends and to

be supervised on site. For participant selection, focus goals must be defined, communicated, evaluated monthly and the invitation process managed. Milestones: Incentive planning, communication, goal monitoring, invitation, participant support, participant lists for taxation (e.g. LUKS = internal BMW taxation tool).

(21) Online Sales Channels onboarding for IRs (e.g.: AOS/Partslink 24 or other local online ordering systems).

Create customer account in the national approved BMW Online Ordering Portal System and connect it with an authorized BMW dealer account (e.g.: AOS/Partslink24 or any other local approved system).

Deliverable: Customer account is created and business relationship with at least one authorised BMW dealer is established. The results are shared with and approved by the NSC in an agreed time frame and format.

Facilitate the onboarding and adoption of AOS (Aftersales Online System) and Partslink24 for Independent Repairers (IRs) and BMW dealers. Create and connect customer accounts, establish relationships with the preferred authorized BMW dealer, connect AOS account to PL24 account and enable IRs to use AOS/Partslink24 for repair indications and parts ordering features. Deliver onboarding support through both regular IR visits and targeted rollout activities, with NSC approval within the defined timeframe.

Measurement Criteria:

Account Creation & Connection

- Definition: Successful creation of AOS/Partslink24 customer accounts for IRs and tying each to an authorized BMW dealer account.
- Metric: % of targeted IRs with active AOS/Partslink24 accounts linked to a dealer account (target: 100% within the onboarding window)
- Link IR into AOS and PL24. connect IR to one authorized BMW-Dealer and account connection between AOS & PL24
- Data source: System records of account creation and linkages

Dealer Engagement

- Check business readiness BMW-Dealer in PL24 (discount matrix in place, stock availability flag activated, etc.)
- Definition: Establishment of business relationship with at least one authorized BMW dealer per IR: initial order done.
- Metric: Number of IRs with an active dealer relationship (target: 100% of targeted IRs)
- Data source: Relationship management logs, partsdata24 and CRM entries

Governance:

- Owner: Market IAM Lead
- Approvals: NSC final sign-off

(22) AOS & PL24 (AOS 2.0) Training.

Conception and implementation of nation-wide dealer training courses (at local dealers and BMW AG training locations) for beginners and experts for the AOS (Aftersales Online System) by a technical trainer.

Conception and organization (e.g. scheduling, agency management) of in-house training, this also includes preparation and control via BMW owned training locations e.g. TAK as well as on-site support and follow-up. Including 1x trade fair visit as an exhibitor preparation and on site.

Deliverable: Dealer training is carried out and a photo protocol was created and submitted.

Annual revision / adjustment of training concept, analysis of market penetration (AOS user analysis 4x a year) plus 15 training courses in a market e.g. Germany.

(23) Technical Support AOS 2.0 & PL24.

Piloting of new AOS applications including KeyReader connection.

Deliverable: Piloting is coordinated, organized and carried out and documentation for evaluation and derivation of measures is created (ticket is accompanying "AOS & PL24 (AOS 2.0) training").

As part of a constant application expansion, new AOS applications must be piloted and evaluated together with the C1-DE and CA-X specialist departments. Record results and develop measures with the BMW departments. The subsequent rollout must be prepared and the "innovations" integrated into the training. Plus support KeyReader connection and evaluation in the market.

(24) IAM Marketing portal onboarding.

Create local IAM Marketing portal account.

Deliverable: Customer account is created and access is granted. The results are shared with and approved by the NSC in an agreed time frame and format.

Ensure that new users can effectively access, navigate, and utilize the marketing portal's features to support marketing activities.

Equip new users with the access, knowledge, and support needed to effectively leverage the marketing portal for their marketing tasks and collaboration.

(25) Parts basket Localization.

Localize a Parts Basket in the respective market (always in the alignment with the central IAM Strategy and Parts Baskets recommendations:

- Identify the market's local car park (vehicle mix, age, common service operations) and recommend a national Parts Basket.
- Localize Parts Basket that aligns with the market's fleet profile and projected demand.

- Validate the localization against market data and ensure coverage of high-demand, core maintenance, and repair parts.

Parts Basket is confirmed by NSC and CA-230. The results are shared with and approved by the NSC and AG in an agreed time frame and format.

The objective is to localize and validate a market-specific Parts Basket aligned with the central IAM Strategy and Parts Basket recommendations. The goal is to ensure that the localized basket reflects the national car park structure, supports high-demand service operations, performs well in the targeted car segments and is confirmed by NSC and CA-230/CA-251. This process may involve adapting a centrally recommended basket or developing a local version, depending on strategic alignment.

Deliverable: Parts Basket is confirmed by NSC and CA-230. The results are shared with and approved by the NSC and AG in an agreed time frame and format.

Scope of Work

- Market opportunities: Analyze the local car park: vehicle mix, age distribution, and service behavior.
- Identify common maintenance and repair operations by vehicle segment and lifecycle stage.

Basket Localization & Maintenance

- Recommend a national Parts Basket tailored to the local fleet profile and projected demand.
- Ensure the basket includes high-rotation, core / competitive / highly competitive maintenance and repair parts, with potential.
- Align the selection with central IAM strategy and existing Parts Basket recommendations.
- Maintenance of the PB (min. 2 x per year), ie superseded PNs, or replacement of PNs / FCs which are not performing, etc

Validation & Governance

- Validate the localized basket against market data (e.g., service frequency, part usage, sales history).
- Ensure alignment with NSC and BMW AG/CA-230, CA-251 governance requirements.
- Share results with NSC and AG in the agreed format and timeline for final approval.

Strategic Flexibility

- Adapt either a centrally recommended basket or a locally developed one, based on the National/Regional strategic direction.

Measurement Criteria

- Coverage: ≥90% of potential and / or of high-demand maintenance and repair parts represented (list provided by CA.230).
- Alignment: Full compliance with IAM strategy and CA-230 governance
- All deliverables submitted within agreed milestones
- Approval: Final basket confirmed by NSC and AG
- Data Quality: Use of validated, up-to-date market and fleet data.

(26) Product Argumenter.

Create and prepare content of the product argumenter.

Deliverable: Product argumenter is finalized (not printed!). The results are shared with and approved by the NSC in an agreed time frame and format.

Product argumenter relevant to business areas must always be kept up to date (content & CI) and optimized. These include, for example: product argumentation, services for individualization by the contractual partners, information for online systems (e.g.: PL24/AOS), product arguments, checklist for HO/SO position determination (sales, DB, bonus, GF share, costs, etc.), guidelines, etc.

Determine what the product argumenter should achieve, e.g. raise awareness, generate leads, or introduce a new product and services. Gather text and pictures. Create a compact product and/or services overview highlighting the main advantages and differentiators.

Only official BMW and licensed Artwork must be used. The product argumenter must be compliant with the BMW CI. The finalized product argumenter must be sent to the NSC.

The results are shared with and approved by the NSC in an agreed time frame, deadline, format and content.

The use of local IT BMW systems also to be aligned with the NSC.

(27) Merchandising products.

Propose, request cost offers and steer production of merchandising products.

The HO / SO must be consulted to find suitable advertising materials. The result is presented to the business partner on NSC-level. In coordination with the business department, offers (according to CI specifications) are obtained for the advertising material, the purchasing process is prepared according to BMW specifications, production, storage and outflow are ensured and regularly evaluated.

Develop a concept and gather product ideas that align with BMW's brand identity and the target audience. Decide on material and quality levels, select manufacturers and suppliers. Align with suppliers for e.g. delivery timeline, Layout

and design. Gather request for quotation from the suppliers and steer production of the merchandising products. Quotation for the merchandising products from the suppliers must be sent to the NSC.

Only official BMW and licensed Artwork must be used. The merchandising products must be compliant with the BMW CI.

The results are shared with and approved by the NSC in an agreed time frame, deadline, format and content.

(28) First-level support - IAM Parts Ordering.

Assist Independent Repairers (IRs) to order Original BMW Parts from the authorized BMW dealers, via call and/or email.

Deliverable: All inquiries related to parts ordering are answered latest within 2 working hours or the next day if the inquiry was placed outside the regular working hours.

The Service Provider will provide a monthly report including quantity of the inquiries (calls/emails) and the respective details about the conversion into order, and the time to resolve the inquiry.

A fully operational ticket-based ordering support system accessible to independent repairers.

Documented processes and scripts for call center agents to handle parts ordering efficiently. Regular performance reports detailing ticket volumes, response times, resolution rates, and customer satisfaction metrics.

A feedback mechanism for IRs to report issues or suggest improvements in the ordering support process.

Implement a ticket-based ordering support call center for independent repairers available during the regular dealer open hours.

Standardized, documented call center processes and scripts ensuring that >95% of the inquiries will be processed.

Monthly performance reports tracking ticket volumes, average response time (<2 hours), resolution rates (>90%), and customer satisfaction scores (>85

Established feedback channel enabling IRs to report issues and suggest improvements, with response targets within 48 hours.

Provide dedicated first-level support to Independent Repairers (IRs) for ordering BMW Genuine Parts through authorized BMW dealers. The Service Provider acts as a call center, receiving inquiries via phone and email, processing these requests, and converting them into confirmed orders efficiently during the regular working hours.

Scope of Work:

- Receive and manage incoming parts ordering inquiries from IRs through phone calls and/or emails.
- Accurately process inquiries and convert them into parts orders with authorized BMW dealers.
- Provide hands-on support to IRs, clarifying order-related questions and guiding them through the ordering process as needed.
- Ensure continuous availability of trained personnel to handle inquiries during defined working hours.
- Maintain a seamless communication flow between IRs, the Service Provider, and BMW authorized dealers.

Quality and Operational Standards:

- Handle all inquiries promptly, adhering to NSC-defined service levels and response times.
- Convert inquiries into orders accurately, minimizing errors and rework.
- Comply fully with NSC requirements, including data privacy, system usage, and process documentation.
- Escalate any complex or unresolved issues to NSC or designated escalation points as per agreed procedures.

Reporting and Deliverables:

- Provide monthly performance reports to NSC, detailing:
 - Total number of inquiries received.
 - Number and percentage of inquiries successfully converted into orders.
 - Average duration per inquiry from receipt to resolution/order conversion.
 - Summary of recurring issues or notable trends in inquiries.
- Upload all relevant data and reports into the designated NSC system within the predefined reporting intervals.
- Participate in periodic review meetings with NSC to discuss performance, challenges, and improvement opportunities.

Governance:

- Operate strictly within the contractual scope and NSC guidelines.
- Ensure all staff involved are trained on BMW systems, ordering processes, and customer service best practices.
- Maintain documentation of all processes, inquiries, and resolutions for audit and quality assurance purposes.

Roles and Responsibilities:

- Service Provider: Operate the call center, manage inquiries, convert orders, generate reports, and maintain service quality.
- NSC: Provide guidance, performance expectations, escalation support, and review of reports.
- Authorized BMW Dealers: Fulfill orders placed through the Service Provider's ordering support.

(29) First-level support - system/technical topics.

Support the authorized BMW dealers via call and/or e-mail during the opening hours.

Deliverable: The question raised by the authorized BMW dealers related to IAM systems e.g. AOS, Partslink 24, local Marketing portal is answered latest within 3 working days.

The Service Provider will provide a monthly report incl. e.g. quantity of calls and mails, detailed topics, and time to solve the requests.

Focus on technical problems, such as system access issues, hardware or software malfunctions, network connectivity problems, and general troubleshooting. Act as the frontline technical helpdesk handling common system and technical problems, ensuring smooth operation.

In case of multiple questions, including e.g. administrative topics, the Service Provider guarantees to forward these to its internal contacts to clarify and solve these issues under the same requirements e.g. within 3 working days.

(30) First-level support - administrative topics.

Support the authorized BMW dealers via call and/or e-mail during the opening hours.

Deliverable: The question raised by the authorized BMW dealers related to marketing topics e.g. Marketing tool box, campaigns is answered latest within 3 working days.

Cover routine administrative issues such as user account management (e.g., password resets, account unlocks), access rights and permissions, handling requests for software or system access, and assisting with general procedural questions.

Serve as the frontline for handling everyday administrative user requests, ensuring proper access and adherence to organizational procedures.

The Service Provider will provide a monthly report incl. e.g. quantity of calls and mails, detailed topics, and time to solve the requests.

In case of multiple questions, including e.g. system/technical topics, the Service Provider guarantees to forward these to its internal contacts to clarify and solve these issues under the same requirements e.g. within 3 working days.

(31) First-level support - IAM program related topics.

Support the authorized BMW dealers via call and/or e-mail during the opening

hours.

Deliverable: The questions raised by the authorized BMW dealers related to the IAM program e.g. KPIs, bonus are answered latest within 3 working days.

The Service Provider will provide a monthly report incl. e.g. quantity of calls and mails, detailed topics, time to solve the requests.

Cover queries and issues related to program schedules, status updates, documentation requests, participation or role clarifications, and general procedural guidance.

Support for IAM program related topics acts as the initial contact point to assist users with everyday questions and tasks related to programs, helping maintain progress and engagement.

In case of multiple questions, including e.g. system/technical topics, the Service Provider guarantees to forward these to its internal contacts to clarify and solve these issues under the same requirements e.g. within 3 working days.

(32) Reporting templates.

Create reporting/dashboard to monitor and report all KPI as required by the NSC.

Deliverable: Templates are finalized.

Financial level key figures: ACTUAL, PER, deviations from Previous year, top 10, flop 10, and forecast for each HO/SO and NL separately and in total for: sales, VAK, DB, VKU funds requirement, target achievement and, with agreement from the department, integration into the FW dashboard.

Key figures on qualitative level: training status, marketing campaigns, PL24 usage, audit results/audit reports, usage of advertising materials, AOS market penetration and concept level and, with consultation from the specialist department, integration into the FW dashboard

Analyzes as maps (geographic information system GIS) if necessary integration into FW dashboard. The respective KPIs to consider and implemented will be provided by each business partner.

(33) Data analytics.

Collect, cleanse, transform, and model all relevant data out of the existing DMS (Dealer Management System) to uncover patterns in one market and prepare for data analytics. Monitor and report performance KPIs e.g. sell-in and sell-out, marketing performance, dealer performance.

The goal is to turn the data into actionable information that can be used to improve business processes, optimize performance, and foster growth.

The KPIs will be aligned between the Service Provider and with each business partner on NSC-level and/or AG-level.

In some markets there are several e.g. three bonus payments every year. The technical assessments (monetary and qualitative) must be carried out for the respective bonus payment and stored in Cobis.

As part of the VKU to HO/SO/NL and MKS as well as integrated agencies / specialist areas. Approx. Time required per week: approx. 2 hours for 52 weeks.

Deliverable: Data from single DMS (Dealer Management systems) is collected and reports are finalized.

(34) Data transfer to internal BMW systems.

Transfer monitored and reported data to the local internal BMW systems.

Deliverable: Requested reporting data is available in internal BMW systems in agreed format and time with the NSC.

(35) Quality test.

Validate and check the dealer certificates (fulfilled, fulfilled with potential for improvement, not fulfilled) for the bonus payments in the eVKU tool (Sgate).

Deliverable: Quality control is finalized.

Quality goals/quality control: In addition to monetary goals, minimum quality requirements must be met in order to receive a bonus payment. To do this, the contractual partners upload the evidence (2900 -3500) to the eVKU tool (Sgate). These must be subject to random checks and marked (fulfilled, fulfilled with potential for improvement, not fulfilled). The monthly results must be presented to the department.

Based on the minimum sales and the quality requirements (eVKU tool), the BMW / MINI partners are to be sorted into the different bonus levels for each completed quarter and prepared for management.

(36) PL24 - KPI monitoring.

Monthly analysis of the system usage of PL24 (e.g. sales, sales share, interface usage, marketing campaigns carried out by HO (trade organization) / SO (Service Only) / NL (subsidiaries), activation of availability display). Integration into FW dashboard upon request.

Deliverable: Analysis and report as a map diagram (geographical information system GIS) and upload dashboard is created and finalized.

The BMW / MINI contractual partners process around 20% of the total FW sales via the online ordering system PL24. System usage must be analyzed monthly with regard to sales, sales share, interface usage, marketing campaigns carried out by HO / SO / NLs, activation of availability display and, with consultation from the specialist department, integration into the FW dashboard.

(37) Consolidation of market reports.

Consolidate the market reports to one report including checking and validating the data quality. Format is specified by CA-230. Data is uploaded to the CDH (Cloud Data Hub).

Deliverable: Data is uploaded to the CDH (Cloud Data Hub).

It must be ensured that the data required for both central and local reporting can be provided at least on a monthly basis in an automated way (latest after 7 working days in the next month). This includes both the collection of data from the BMW dealer side and the consolidated provision for BMW NSC and BMW Headquarter. If requested, the automated transfer of data to BMW systems like CDH must be ensured.

(38) Central Steering.

Provide an overview of executed measures per region (C1, C3, C4, C5) and per markets within one region.

Deliverable: Quarterly Report in an aligned form of executed measures and achievements per market is provided and presented to AG (and NSC).

Scope and Purpose:

- Establish a centralized IAM business support to drive global-to-local strategy with three core pillars:
- Centralized reporting: collect, aggregate, and deliver IAM data from all markets into one standardized system/report.
- Centralized Parts Basket Steering: define and govern a global parts basket framework (categories, pricing bands, stock targets) across markets.
- BMW Toolbox deployment: support markets in implementing the BMW IAM toolbox (training, templates, processes, and governance) to ensure consistent execution.
- Collaborate with NSC to ensure governance, compliance, and market relevance; provide auditable, KPI-driven outputs.

What's Included:

1. Centralized IAM Reporting

- Design and implement a single, standardized data model and reporting platform.
- Data collection: define required data elements from all markets (volumes, uptake, ROI, cycle times, SLA adherence).
- Aggregation & dashboards: monthly/quarterly executive dashboards with drill-down by market and program.
- Data quality: establish data validation rules, error handling, and stewardship responsibilities.

2. Central Steering of Parts Basket

- Global framework: establish categories, pricing bands, stock targets, and availability rules.
- Market alignment: ensure local adaptations fit within the global framework; assess deviations and their relevance and report them centrally.
- Change management: control changes to basket policies; communicate updates to all markets.

3. BMW Toolbox Deployment Support

- Market onboarding: provide training, templates, and governance guidelines for the BMW IAM toolbox.
- Implementation support: assist markets with rollout plans, milestones, and milestone tracking.
- Compliance and governance: ensure toolbox usage aligns with NSC/Legal requirements and BMW standards.

Expected Outputs (One Ticket)

- Centralized IAM reporting: data model documentation, data dictionary, dashboards, and schedule.
- Central Parts Basket governance: global framework document, approved market adaptations, and change log.
- Toolbox deployment package: rollout plan, training materials, templates, and usage guidelines.
- Market-specific rollout plans: aligned with global milestones and NSC approvals.
- Key performance indicators (KPIs) and success metrics for all three pillars.

Operations and Governance

- All work within the ticket system; log all actions and decisions as ticket entries.

- NSC/Legal alignment: continuous involvement for governance, data handling, and policy compliance.
- Documentation: BMW-approved templates; bilingual where needed; ensure traceability of decisions.

Rules and Dependencies

- Acceptance: Engagement must include centralized reporting, central parts basket steering, and toolbox deployment within the LV.
- Ticketing: All work items created and closed in the ticket system; non-ticket work is not billable.
- NSC Collaboration: Essential for governance and critical approvals.
- It must be ensured that market data/reports are summarized into one regional report.

(39) Collision Estimate Data.

Ability to receive and store estimate data from 4th level. Parts Sales Conquests. Receive estimate data directly from 4th-Level (IRs).

Deliverable: Receive estimate data directly from 4th-Level (IRs).

The ability to receive collision estimate data directly from 4th Level Bodyshops registered with the supplier allowing the data to be shared develops a data-driven understanding of the collision opportunity across the registered 4th level shops. The utilization of this data enables the NSC to understand not only the sales made by the Dealer network but also the lost sales and will enable the supplier to proactively work with the Dealer network to reduce the value of lost sales to other parts suppliers in the market.

Outputs should be produced with a consistent methodology and made available to the NSC.

Scope:

- Receive and Store estimate data from 4th level:
- Develop infrastructure with estimate data sources in the market and create processes where 4th level Bodyshops can register with the supplier to enable automated receiving of estimate data.

Measurement and Acceptance Criteria:

- Data sources in the market are identified. Where the data source has sufficient market share it is expected that API integration takes place.
- Estimate data is automatically received by the supplier from 4th level when registered with the supplier.

(40) Parts Sales Conquests.

Enable BMW NSC to increase sales of BMW & MINI Collision parts to 4th Level.

A database of competitive part numbers and market pricing is created and maintained. The information in this database is used to provide targeted special offers on collision parts to IRs and strategically utilise BMW conquest funds.

Deliverable: **A database of competitive part numbers and market pricing is created and maintained.** The information in this database is used to provide targeted special offers on collision parts to IRs and strategically utilise BMW conquest funds.

Using the part number data received from the 4th level estimate and comparing it to a database of known competitive part numbers will enable the supplier to proactively provide competitive pricing to the 4th level and secure an increase in collision parts sales on behalf of the NSC and the Dealer.

When a competitive quote is sent to a 4th level it is a requirement that the supplier has a process enabling follow-up and further negotiation, if required, with the 4th level to maximise sales opportunities. After follow-up and any further negotiation should the 4th Level decide to purchase parts from alternate suppliers in the market the ability to record lost sales is required. Processes are also required to maintain the competitive part numbers database. Any support provided must not exceed parameters as agreed with the NSC. Any Dealer rebates must be in line with calculations as agreed with the NSC.

Deliverables will include the ability for the NSC to analyse the programme performance and gain insights into the value of the conquest funds provided to the 4th level along with the sales conquests and any lost sales by vehicle model and part number. Outputs will be produced with a consistent methodology and available within a timeframe as agreed with the NSC.

Scope:

- Gather and store marketplace intelligence data:

Compile market data on competitive part numbers in the market and store the information where it can be accessed by the supplier's system.

Notification of competitive parts:

- The system should recognize and provide user notification that a received estimate contains a competitive part number.

Conquest Funds & Dealer Rebates:

- Discounts provided during the sales conquest process must not exceed the agreed parameters as agreed by the NSC.

- Dealer Rebates must be calculated within the agreed timeframe with the NSC.

Measurement and Acceptance Criteria:

- NSC can analyse
- Funds used during parts conquest process and Dealer rebates.
- Parts and vehicle models that are competitive in the market
- Dealer and 4th level engagement
- Analysis information is available within agreed timeframes.

(41) Proactive Total Loss Avoidance.

Provide a proactive Total Loss Avoidance Programme to retain BMW customers.

Deliverable: Estimate data costs from IRs is compared against pre determined criteria. Estimates where the costs exceed the rules are reviewed and a special offer is provided to the IR to enable the vehicle repair to proceed.

The supplier is required to provide a proactive Total Loss Avoidance Programme to enable the retention of BMW customers who are involved in collisions when the economics of vehicle repairs is causing the insurer to consider the vehicle a Total Loss. The supplier should proactively use BMW funds and provide a quote to the 4th level that reduces the costs of the vehicle repairs, thereby enabling the vehicle to be safely repaired and the customer retained within the BMW brand.

Quotes provided to the 4th level should not exceed the parameters agreed with the NSC. Due to the nature of estimates that fit into this category, the supplier needs to provide quotes to the 4th level within a 1 working day period.

The parameters that determine these estimates should be agreed with the NSC and reviewed within an agreed timeframe.

Scope:

- Identify estimates flagged as having a high likelihood of being considered Total Loss.
- Provide a quote within the agreed NSC parameters to the 4th level within 1 working day.
- Follow up with the 4th level and carry out additional negotiation if required. Close out quotes where the vehicle was still Total Lossed by the insurer and provide any available insights.

Measurement and Acceptance Criteria:

- NSC can analyse
- Effectiveness of Total Loss Quotes and Orders
- Vehicle models
- Ratio's that determine if the vehicle is a potential Total Loss.
- Use of NSC funds
- Dealer and 4th level engagement
- Analysis information is available within agreed timeframes.

(42) National Account Compliance.

Business with Collision IR Groups (MSO's) is increased and compliance analysis is available.

Deliverable: Upon approval by the NSC, the supplier will setup, operate and maintain a programme with Collision IR groups that increases the purchases of BMW parts from the BMW Dealer network and provides measures to ensure compliance with agreed targets.

In markets where Collision IR groups exist it can be advantageous to have national pricing agreements in place and increase the purchases of BMW parts by these groups.

The supplier will develop a programme that enables compliance with agreed pricing deals between the NSC, Dealers and Collision IR groups (multi-site operators or MSO's) in the market.

This compliance ensures that nationally agreed pricing can be administered by the supplier, there is transparency between all parties involved and that the purchases of genuine BMW parts by MSO's are at the agreed target levels.

Key MSO's will be identified, the current loyalty to genuine BMW parts will be established and processes implemented to increase loyalty if below 100%.

Scope:

- Identify key MSO's in the market.
- Determine current loyalty to genuine BMW parts
- Discuss pricing levels required to secure an increase in genuine BMW parts purchases.
- Implement agreements and processes that ensure compliance to the agreed terms.
- Provide monitoring.

Measurement and Acceptance Criteria:

- NSC will review opportunity analysis and provide final approval before agreements are implemented.
- As a minimum the NSC can analyse
 - Effectiveness of the agreements with MSO's
 - Quote to Order ratio
 - Reasons for any lost sales.
- Analysis information is available within agreed timeframes.

(43) Programme Analysis.

Analyse programme effectiveness.

Deliverable: Collision Programme portfolio analysis is finalised. The results are shared with the NSC in an agreed time frame.

The supplier will provide access to a suite of reports for the NSC. The utilization of these reports will provide the NSC with a clear understanding of the programme effectiveness including rebates owed to the Dealer network and ROI at a DNP level.

In addition to the reports access the supplier is also expected to deliver programme reviews to the NSC at agreed time frames and in a format agreeable to the NSC.

All outputs must be produced with a consistent methodology.

Scope:

- Report Suite:
 - The NSC will have access to a suite of reports enabling them to understand the effectiveness of the programme.
 - The supplier will provide an overview of the available reports to enable understanding by the NSC.
- Supplier presentations:
 - Supplier delivers a programme review at an agreed timeframe with the NSC and in a consistent format.

Measurement and Acceptance Criteria:

- All reporting is updated in a timeline agreed by the NSC
- Supplier presentations are delivered within the agreed time and in a consistent format.

(44) Bodyshop & Paint Programme

Development, Accreditation & Training of Approved BMW & MINI Bodyshop Network (Dealer owned & Independent)

Deliverable: Bodyshop Network is analysed and support/development, training, audit / accreditation & on-boarding including annual Global Standards Audits is finalized.

The results of each ticket are in advance aligned, shared with and approved by the business department of each BMW NSC and BMW AG business partner individually in an agreed time frame, deadline, format and content as well as the respective local IT tools and systems.

AI efficiencies are to be expected. Please describe these as part of your offer, including AI share, tools, etc.

The use and interface of local IT BMW systems is also to be aligned with the business department of each BMW NSC and BMW AG business partner individually.

There is a performance catalog for the Global IAM Tender 2026+ with 44 work packages described in the specification/specification/performance catalogue.

Deviations from the BMW specification/performance catalogue shall not be accepted and are invalid.

All orders are made exclusively according to the contractually defined work packages respectively tickets.

Assignments outside the contractually defined work packages respectively tickets are not permitted, not billable and will not be remunerated.

Forecasts or delivery forecasts of service packages or tickets are only non-binding benchmarks and do not create any obligation for BMW to order or purchase corresponding volumes.

The contractor is obliged to provide the requested service packages or tickets. Only service packages or tickets that have been commissioned, provided in accordance with the contract and confirmed by the BMW business department can be remunerated.

Upon acceptance of the order, the external Service Provider shall be obliged to provide the full scope of services described in the specification/service agreement. All services that are required for the contractual performance of the services shall be part of the contract. This applies in particular to services which are not apparent from the tender documents but which are necessary for the implementation of the BMW requirements within the scope of the tendered trade.

Even in addition to the service description, the contractor is obliged to provide all measures necessary for the provision of services to fulfill the contractually defined service packages, even without additional remuneration (as regulated in the AVB's).

Any necessary training to train his employees must be provided by the third-party agent himself.

Induction plan:

If BMW or another successor company has to incorporate itself into the services to be provided after the end of the service provision by the Contractor, the Contractor will incorporate BMW or the successor company a reasonable time (max. 6 months) into the provision of services. The costs of the induction shall be borne by the party which requires the training (costs must be included in the offer for new entrants). The processing of ongoing task packages must also be ensured during the training period. Here-for, a takeover schedule incl. start-up plan and training measures and training (if necessary) of the own employees must be created.

The Contractor is obliged to procure and comply with laws, regulations and from the BMW GROUP PARTNER PORTAL under <https://b2b.bmwgroup.net/group/b2b> necessary documents and to conclude necessary agreements from BMW GROUP PARTNER PORTAL under <https://b2b.bmwgroup.net/group/b2b> with the corresponding BMW business department.

This includes also for this contract necessary and related regulations, guides and documents under <https://b2b.bmwgroup.net/group/b2b> > Departments i.e. > Technologies as well as in the BMW Partner Portal under <https://b2b.bmw.com> > Applications > TERE other regulations such as

GS 99001 – Betriebsmittelvorschrift; Arbeitssicherheit; Anforderungen an Lieferanten

GS 99003 – Betriebsmittelvorschrift; Umweltschutz; BVU0

GS 99004 – Betriebsmittelvorschrift; Sicherheitshinweise für Fremdfirmen

(the master/administrator of the contractor in the BMW Partner Portal must assign the role of "TEREG Standards Officer" to an employee for this purpose).

The following delivery condition applies (Incoterms 2010): **DAP**

2.3. Travel expense accounting:

All travel expenses are included in the scope of services / work packages / tickets. A single travel expenses refund by BMW AG is not possible.

2.4. Provision by BMW**Alternative 1: If no delivery is made**

BMW does not make any provisions.

BMW does not provide supplies in the form of mobile phones and SIM cards.

An operator is generally responsible for the operation of supplies.

This also includes compliance with the legal requirements of environmental protection, occupational protection, etc., as well as regular reporting to the BMW business department. The operator shall ensure that all equipment, machinery, tools, protective equipment, auxiliary equipment and work equipment used by him is operated in compliance with all legal, labor and safety regulations and regulations. Incidents relating to occupational safety and environmental protection, etc. in the context of the fulfilment of the order, must be reported unrelated to the client (BMW third-party company coordinator/ project manager/subproject manager).

2.1.1 IT

Due to security requirements (virus protection, etc.), connecting third-party hardware to the BMW network is not allowed.

If there is a need for an external fixed line (telephone as well as fax) for the third-party Service Provider, it must be clarified with the BMW IT department and commissioned and installed at his own expense. The third-party Service Provider should have its own mobile phones available to ensure accessibility. Contracts and mobile phones must be procured on their own responsibility and at their own expense. The network coverage must be ensured by the Contractor. The selection of the mobile operator by the third-party provider must be made in such a way that the network coverage is guaranteed.

Selection with IT connection, e.g. for development services:

The contractor has to ensure a connection to the required BMW systems to be able to perform the services in his own office.

The use and interface of local IT BMW systems is to be aligned with the business partner of each business department of each BMW NSC and BMW AG business partner individually.

Before starting the contractually owed service, the contractor's declaration (ANE) must be completed jointly by the project manager of the contractor and the project manager of the BMW business department and signed by both parties. In the event of a change in the general conditions (risk assessment), the ANE must be updated.

Before entering the BMW properties for the first time, the Contractor must provide its employees with the corresponding visitor flyers, e.g.: "Regulations for visitors and Contractors" (deposited in the BMW GROUP PARTNER PORTAL (B2B)). Alternatively, the flyer can also be requested directly from BMW Factory Protection. The Contractor coordinator is encouraged to verify that employees have read and understood the rules.

The Contractor is obliged in the BMW GROUP PARTNER PORTAL to take care of the relevant documents and to conclude necessary agreements with the corresponding BMW business department under <https://b2b.bmwgroup.net/group/b2b> see > Collaboration.

Explicit reference is made to the topic "Safety at work and ergonomics" with the necessary documents and agreements (i.e.: > Collaboration > Safety at work and ergonomics > Common Items: i.e.: „BMW GROUP STANDARD SAFETY INFORMATION FOR EXTERNAL

COMPANIES“ and “CONTRACTOR'S DECLARATION“).

The contractor ensures for on-site topics that all equipment, machines, tools, protective equipment, auxiliary equipment and work equipment used by him are operated in compliance with all legal, labour and safety regulations and provisions.

Incidents relating to occupational safety and environmental protection, etc. in the context of the fulfillment of the order, must be reported immediately to the client (BMW third-party company coordinator/ project manager/subproject manager).

The following scenario is to be aligned and approved by each business partner on NSC-Level (markets). In case of central tickets, ordered by CA-23/0 the respective business partner is responsible for aligning and approving the following scenarios.

Scenario off-site:

The service shall always be provided at the supplier's premises.
BMW shall not provide any assistance in the form of workplaces or pool places.

2.5. Interface List (IL)

The application of the interface list (IL) improves and simplifies the cooperation of the interface BMW and the contractor. The clear representation of the Contractors interfaces with BMW and, if necessary, other external partners reduce the workload and creates internal and external transparency.

The following applies to contracts or catalogs for which the interface list has not been drawn up before the order is placed:

Prior to the call-off, the valid interface list (IL) must be prepared by the calling BMW business department (BMW project manager) and handed over to the Contractor. All relevant BMW departments must be mentioned there.

The IL will be provided by each business partner on NSC-Level (markets). In case of central tickets, ordered by CA-23/0 the respective business partner is responsible for aligning, providing and approving the IL.

2.6. Acceptance Procedure

In all other respects, provisions pursuant to Clause 1.4 shall apply.

Optional at BMW AG plants:

The performance of Contractor is effected by BMW business department. The basis for the performance measurement is the measurement criteria stored in the performance catalog as well as the agreed key performance indicators (KPIs). Furthermore, BMW reserves the right to

randomly check the contractual implementation of the ancillary services. Defect points are recorded in writing and documented as a deviation from the target state. Defects must be rectified immediately or after consultation by the earliest possible date. The result of the above-mentioned quality control is a basis for regular communication according to the mirror organization chart or interface list as well as the monitoring of the KPIs. Review and release of payment is made according to the performance measurement and acceptance of performance [see chap. 2.8 Compensation, settlement, payment].

2.7. Key Performance Indicator (KPI)

Note: The specialist department or the requestor must define key figures to measure the level of compliance (in accordance with the service description in Section 2.2). In addition, responsibilities, timing of performance measurement and so-called performance reviews must be agreed.

According to ISO 9001 and other risk-management principles (e.g. ISO 31000) the following shall apply:

In all other respects, provisions pursuant to Clause 1.4 shall apply.

2.8. Defects and performance disruptions

The provisions according to Clause 1.4 including attachments shall apply and, unless otherwise regulated, the legal regulations. The claim to follow-up costs/replacement costs remains unaffected.

Optional at BMW AG plants:

The Contractor has a general obligation to notify him of any defects that can be identified within the scope of services, which cause avoidable costs at BMW. These include, in particular, repair requirements, uneconomical operation, incorrect user behavior as well as environmental and safety-related maladministration. The notice must be made in writing immediately, at the latest on the following working day, and the consequences must be indicated. The Contractor is liable for the consequences of the damage if BMW has not been informed or has been informed too late. If the Contractor causes damage to buildings or equipment/plant technology, it is up to BMW to decide on a case-by-case basis who will commission the repair Service Provider. The cost offsetting takes place between the Contractor and the repair Service Provider or, when commissioned by BMW, the costs are invoiced via the central factory statement of BMW. The Contractor is liable for the consequences of the damage if BMW has not been informed or has been informed too late.

2.9. Remuneration, billing and payment

For work contracts usually without a credit procedure:

Without crediting procedure: Payment is made after contractual performance and acceptance and receipt ("postmark BMW") of the auditable invoice within 30 days net.

Performance Elements

Note: the following Performance Elements are an **optional component** and the use of it will be decided on the NSC-Levels individually.

In conjunction with the defined tickets also additional performance related elements can be included in the local contract with the NSC. This agreement is applicable for the entire contract duration and will be renewed for the following contract. It is the recommendation to include a bonus based on achieved performance in suitable tickets.

The recommended tickets are:

- Customer Visit
- AOS/ Partslink 24 onboarding

The bonus is contingent upon the successful achievement of the performance goals as detailed below.

For each ticket different criteria for performance measurement are available. It is important to be able to measure an impact based on a previous made action by the provider. Please note that the NSC is entitled to make use of different criteria for the bonus / malus agreement and is responsible to set-up a local agreement.

Example for agreements

- Customer Visit: sales agreement
Criteria: Visit has to be proven by visit report and the results are shared with and approved by the NSC in an agreed time frame and format (deliverable: Visit report is filled out and data is uploaded in the local BMW tool (NSC-level). The results are shared with and approved by the NSC in an agreed time frame and format.). The customer is not categorised as a very active customer.

Target: Proven turnover within the next 2 months after the customer visit.

Bonus elements:

- Sales revenue up to 1.000€: max. 30€ Bonus
 - Sales revenue up to 1.500€: max. 75€ Bonus
 - Sales revenue up to 2.000€: max. 140€ Bonus
-
- Customer Visit: Activation new, inactive and/or dormant customers

Criteria: Visit has to be proven by visit report and the results are shared with and approved by the NSC in an agreed time frame and format (deliverable: Visit report is filled out and data is uploaded in the local BMW tool (NSC-level). The results are shared with and approved by the NSC in an agreed time frame and format.).

Initial situation: Independent Repairer (IR) or Garage Chain is categorized as dormant or inactive.

Target: Proven turnover within the next 2 months after the customer visit. Dormant or inactive Independent Repairer and/or Garage Chains is transferred into an active buyer within 2 months after the visit was conducted. The status active can be achieved by a purchase part from the assigned dealer. The NSC may set a minimum purchasing value for each activated customer (e.g. 1.500€) that must be met for the activation to qualify for remuneration.

Bonus elements:

The service provider will receive a fixed remuneration of maximum 500€ per successfully activated customer. The NSC reserves the right to adjust the remuneration amount as needed.

Further details: The service provider will be remunerated based on the successful activation of dormant or inactive customers, identified together with the NSC via unique customer identification numbers. The NSC will provide the service provider with a targeted list of dormant/inactive customers to be visited. The NSC will set activation targets and monitor progress regularly to ensure transparency and accountability.

- **AOS/ Partslink 24 onboarding: sales agreement**

Criteria: Creation of an AOS/Partslink24 customer account and the connection with an authorized BMW dealer account has to be proven by a report and the results are shared with and approved by the NSC in an agreed time frame and format (deliverable: Customer account is created and business relationship with at least one authorised BMW dealer is established. The results are shared with and approved by the NSC in an agreed time frame and format.)

Initial situation: The customer has not yet an active account in the Online Sales Channel and has not yet ordered online.

Target: The customer has an active account and is ordering parts online within the next 2 months after being onboarded by the provider.

Bonus elements:

- Sales revenue up to 500€: max. 15€ Bonus
- Sales revenue up to 1.000€: max. 50€ Bonus

- Sales revenue up to 1.500€: max. 105€ Bonus

2.10. Change Management

All changes to the contract must be made in the form of a change request, with integration of BMW purchasing department, evaluated by the BMW business department and deposited by quote.

Changes must be submitted to the BMW business project management before work begins and approved in writing. The commission of the execution of the change is subject to cost negotiation by the BMW indirect purchasing department.

For minor changes with no effect on the performance catalog, interface list, project organization, communication structure, the CR sheet (Change Request Sheet) can be used (e.g. extension/reduction of existing work packages, change of quantity). Otherwise, in the event of changes in the content of the current contract, the corresponding documents (i.e. performance catalog) must be adapted in versioned form.

The basis for the evaluation of changes are the negotiated conditions of the basic scope. These are valid for the entire duration of the project.

2.11. Project Organisation, Communications Structure and Reporting

Please visually represent the project organization and communication structure you have planned for this scope, taking into account the entire service period and any sub-suppliers, branches or investment companies used. This must meet the BMW specifications accordingly.

The Contractor appoints an executive or manager as the project manager or sub-project manager for this contract.

Explicitly specify the name of the project manager/ sub-project manager and explicitly indicate the total share of communication in the overall work in the quotation.

The project organigram and communication structure must be made available to the persons involved in the contract.

Meetings take place only at the invitation of BMW in meeting rooms of BMW or only at the invitation of the Contractor in meeting rooms of the Contractor.

Exceptions are activities that are the prerequisite for the execution of a work contract and at the same time represent a very small amount of the entire scope, e.g. in the case of changes in the concept of production plants, the inspection of the existing plants on site. These activities require the approval of the responsible BMW business department.

If, in the case of a catalogue, the BMW business department is not the BMW project manager

for the entire contract, the respective BMW subproject manager (calling BMW business department) will be named if it has not already been done. This must be done before call-off. The calling BMW business department (BMW project manager or BMW subproject manager) prepares a list of all meetings with appointments and BMW contact persons before call-off and hands them over to the external project manager / subproject manager. If not yet done, the external project manager / subproject manager and the BMW project manager/subproject project manager agree on a communication structure that is appropriate to the BMW Interface list (IL) before call-off. The Contractor must ensure that the communication structure and IL are available according to the call-off before the start of the work.

The contractor provides a non-personalized communication channel (e.g. project email address, hotline telephone number) to retrieve the individual tickets for the individual sub-projects. Should a ticket management system be specified by the client (ACE/ALF/ITSM/JIRA/etc.), this is mandatory for the contractor to use it. The system must be setup/configured on the contractor side in such a way that a non-personalized communication channel or via a bridgehead (project leader) is ensured.

The Project Organisation, Communications Structure and Reporting will be provided by each business partner on NSC-Level (markets). In case of central tickets, ordered by CA-23/0 the respective business partner is responsible for aligning, providing and approving it.

The following scenarios will be decided by each business partner on NSC-Level (markets) and by each business partner on AG-Level in case of central tickets.

Scenario: off-site:

The main communication (e.g.: Regular report to BMW regarding the overall status of the contract, performance confirmations, acceptances, etc.) is carried out by the BMW project manager and the project manager of the Contractor.

The Contractor must not reject to and has to comply with audit requests/requirements by BMW or by BMW commissioned in accordance with the applicable standard, the various management systems.

Quality management:

The Contractor has to confirm its certification for quality management at least in accordance with the current **ISO 9001** and that a corresponding procedure is available for this tendering scope. The certification must be proven to the client by presentation of a corresponding certificate. BMW and the Contractor may agree in writing deviations from the requirements.

In all development services, the Contractor has to ensure that he knows and uses all requirements, methods and techniques (FMEA, etc.) as required by the **IATF 16949**.

When manufacturing BMW (car/motorcycle) vehicle parts and also during part finishing (outsourced processes), the Contractor has to be certified in accordance with IATF 16949 and comply with them; the certification must be proven to the client by presentation of a corresponding certificate. BMW and the Contractor may agree in writing deviations from the requirements.

The Contractor has to apply the PPF procedure for the production of samples to the PPF.

The Contractor carries out an examination of the samples to the PPF in accordance with the publication of the VDA "Quality Management in the Automotive Industry, Volume 2: Ensuring the Quality of Deliveries" in their current form.

Before delivery of the goods, the Contractor has to have successfully completed the production process and product release process of the serial process (hereinafter "PPF procedure") if the delivery:

- for the first time or
- under a new non-fiction number, or
- after a change in the production process (e.g. due to the addition of a further customer to production line).

Important note for possible near-series components/pre-series:

In the case of components close to series production that are relevant for approval, the component supplier must prove that he has the corresponding approval of the relevant authority (since 01.09.2020 the vehicle manufacturer is responsible, see FATEV EG-8/167/2018).

In addition, the following applies:

In the case of "pre-series", a schedule must be drawn up and adhered to for the suppliers of components relevant to approval, so that the approval authority for the individual components is prior to the date for the approval of the entire vehicle.

Environmental management:

The Contractor undertakes to introduce, operate and prove a certified environmental management system in accordance with ISO 14001 by the time production starts (SOP) at the latest. BMW and the Contractor may agree in writing deviations from the.

Social Responsibility / Occupational Safety and Health Management:

Is regulated above all in the AVB's

BMW and the contractor may agree deviations from the requirements in writing.

TISAX

Members of the VDA (German Association of the Automotive Industry e.V.) have jointly developed the "TISAX" model ("Trusted Information Security Assessment Exchange"). It serves to define and apply an industry-standard for information security requirements/testing procedures, with the aim of mutually recognizing information security checks by partners and establishing a uniform level of security. The BMW Group is also striving for widespread use of the TISAX model in its supplier network in order to increase the level of information security in cooperation with partners. For example, in future, BMW will require its suppliers to provide

proof of appropriate VDA information security testing by accredited TISAX testing Service Providers.

Detailed information on the TISAX model is available at <http://www.enx.com/tisax>.

The contractor provides information security certification in accordance with the requirements of the VDA Trusted Information Security Assessment Exchange (TISAX) at the required level of protection for its locations relevant to procurement. Instructions for automatically transferring TISAX certificates from the ENX portal to the BMW Group Partner Portal are available at ENX, or in the BMW Group Partner Portal under the menu item SPECIALTIES -> PURCHASING, INDIRECT MATERIAL -> CERTIFICATES. The link to the BMW Group Partner Portal is: <https://b2b.bmw.com>. The Information Security Officer (ISB) must also be stored in the BMW Group Partner Portal. To do this, please navigate to MAINTAIN SUPPLIER DATA under the APPLICATIONS menu item. After selecting your supplier number, navigate to CONTACT PERSON and store the ISB's contact details there. If no counting address has yet been stored in the BMW Group Partner Portal for relevant locations, you can apply for this under MASTER DATA -> COUNTING ADDRESSES -> REQUEST A NEW COUNTING ADDRESS.

The testing is carried out on a site-specific basis and must be verified for all locations where relevant BMW data with high or very high protection requirements is stored/processed. We would like to point out that the VDA model also provides for group audits for several locations so that larger companies can get through the audit at relevant locations more efficiently.

All locations relevant to procurement, for which a TISAX test must be proven as part of this request, must be mentioned in the offer, with the BMW supplier number and address. In addition to BMW's audit law (information security) of the "General Contract Terms for Indirect Purchasing" (AVB), due to the particular importance of the project or due to the particular need to protect the information concerned, BMW has the express right to carry out an audit on you without cause, even if there is proof of an appropriate level of information security (e.g. in the form of a TISAX certificate).

Following TISAX certifications are necessary for this tender:

- TISAX label "Confidential"

Other involved locations and subcontracting

The contractor must ensure that all locations involved in the service provision meet all requirements of BMW (e.g. TISAX at the required level, current ISO 9001 certification, data protection, confidentiality etc.). This obligation also applies in the case of subcontracting.

2.12. Project Language

The Project language is German, English and all native languages in the markets.

2.13. Obligation to provide information and escalation to the third-party Service Provider

In general, it is the obligation of the Contractor to identify, evaluate and inform BMW in good time in the event of target deviations of any kind (e.g. technical, on schedule...) (Contractor's obligation to escalate) as well as to agree first measures with the BMW department. This does not release the Contractor from its obligation to perform services of the contract or from its obligation of liability and warranty.

Information Security / Review

Is regulated above all in the AVB's.

The Contractor must enable BMW to check compliance with BMW's specifications on site.

3 Additional Commercial Regulations

3.1. Withholding Tax

In the case of a possible commissioning of services by BMW AG to a foreign company based abroad, the offer of the foreign supplier must in principle indicate the remuneration without taking withholding tax into account. The reference to a possible withholding tax deduction (currently 15.825%) of the total remuneration/partial amount subject to withholding tax has been anchored in the sample contracts since the end of 2018 by a so-called gross tax clause, which also corresponds to the statutory regulation. Otherwise, the withholding is regulated in clauses 10.1 to 10.4 of the GTC or clause 18.3 of the “EVB” (BMW Group Terms and Conditions - Development for Series Demand).

U.S. Withholding Tax

If a person or company (contractor) that is not resident in the USA is commissioned, which is or could provide services in the USA, the gross remuneration must be stated in the contractor's offer. The notice of a U.S. withholding tax deduction (currently 30% of the withholding tax amount) is enshrined in the contract templates through a so-called gross tax clause in the General Terms and Conditions.

3.2. Cross-border movement of goods:

In the case of necessary import and export processes, the systemic and procedural specifications of BMW AG must be used and implemented. The detailed processes must be coordinated with the BMW Customs Department (EU) on a case-by-case basis. This can be necessary from the beginning of the contract period as well as during the contract period. In any case,

compliance with the legal basis must be ensured by the contractor.
